# Introduction

**T**he *Oracle Support Technical Reference Manual* provides the information you need to understand the underlying structure of Oracle Support. After reading this manual, you should be able to convert your existing applications data, integrate your existing applications with Oracle Support, and write custom reports for Oracle Support, as well as read data that you need to perform other tasks.

This chapter introduces you to the *Oracle Support Technical Reference Manual*, and explains how to use it.

---

# Introduction

At Oracle, we design and build applications using Oracle Designer, our systems design technology that provides a complete environment to support developers through all stages of a systems life cycle. Because we use a repository-based design toolset, all the information regarding the underlying structure and processing of our applications is available to us online. Using Oracle Designer, we can present this information to you in the form of a technical reference manual.

This *Oracle Support Technical Reference Manual* contains detailed, up-to-date information about the underlying structure of Oracle Support. As we design and build new releases of Oracle Support, we update our Oracle Designer repository to reflect our enhancements. As a result, we can always provide you with an *Oracle Support Technical Reference Manual* that contains the latest technical information as of the publication date. Note that after the publication date we may have added new indexes to Oracle Support to improve performance.

---

## About this Manual

This manual describes the Oracle Customer Relationship Management (CRM) Applications Release 11i data model, as used by Oracle Support; it discusses the database we include with a fresh install of Oracle CRM Release 11i. If you have not yet upgraded to Release 11i, your database may differ from the database we document in this book.

You can contact your Oracle representative to confirm that you have the latest technical information for Oracle Support. You can also use Oracle*MetaLink* which is accessible through Oracle's Support Web Center ([http://www.oracle.com/support/elec\\_sup](http://www.oracle.com/support/elec_sup)).

---

## Finding the Latest Information

The *Oracle Support Technical Reference Manual* contains the latest information as of the publication date. For the latest information we encourage you to use Oracle*MetaLink* which is accessible through Oracle's Support Web Center ([http://www.oracle.com/support/elec\\_sup](http://www.oracle.com/support/elec_sup)).

---

## Audience

The *Oracle Support Technical Reference Manual* provides useful guidance and assistance to:

- Technical End Users
- Consultants
- Systems Analysts
- System Administrators
- Other MIS professionals

This manual assumes that you have a basic understanding of structured analysis and design, and of relational databases. It also assumes that you are familiar with Oracle Application Object Library and Oracle Support. If you are not familiar with the above products, we suggest that you attend one or more of the training classes available through Oracle Education (see: Other Information Sources: page 1 – 7).

---

## How This Manual is Organized

This manual contains two major sections, High-Level Design and Detailed Design.

### High-Level Design

---

This section, Chapter 2, contains database diagrams and lists each database table and view that Oracle Support uses. This chapter also has a list of modules.

### Detailed Design

---

This section, Chapter 3, contains a detailed description of the Oracle Support database design, including information about each database table and view you might need for your custom reporting or other data requirements.

---

## How to Use This Manual

The *Oracle Support Technical Reference Manual* is a single, centralized source for all the information you need to know about the underlying structure and processing of Oracle Support. For example, you can use this manual when you need to:

- Convert existing application data
- Integrate your Oracle Support application with your other applications systems
- Write custom reports
- Define alerts against Oracle Applications tables
- Configure your Oracle Self-Service Web Applications
- Create views for decision support queries using query tools
- Create business views for Oracle Discoverer

You need not read this manual cover to cover. Use the table of contents and index to quickly locate the information you need.

---

## How Not To Use This Manual

---

### **Do not use this manual to plan modifications**

You should not use this manual to plan modifications to Oracle Support. Modifying Oracle Support limits your ability to upgrade to future releases of your Oracle Support application. In addition, it interferes with our ability to give you the high-quality support you deserve.

We have constructed Oracle Support so that you can customize it to fit your needs without programming, and you can integrate it with your existing applications through interface tables. However, should you require program modifications, you should contact our support team (see: Other Information Sources: page 1 – 7). They can put you in touch with Oracle Services, the professional consulting organization of Oracle. Their team of experienced applications professionals can make the modifications you need while ensuring upward compatibility with future product releases.

### **Do not write data into non-interface tables**

---

Oracle reserves the right to change the structure of Oracle Applications tables, and to change the meaning of, add, or delete lookup codes and data in future releases. Do not write data directly into or change data in non-interface tables using SQL\*Plus or other programming tools because you risk corrupting your database and interfering with our ability to support you.

Moreover, this version of the *Oracle Support Technical Reference Manual* does not contain complete information about the dependencies between Oracle Support applications tables. Therefore, you should write data into only those tables we identify as interface tables. If you write data into other non-interface tables, you risk violating your data integrity since you might not fulfill all the data dependencies in your Oracle Support application.

You are responsible for the support and upgrade of the logic within the procedures that you write, which may be affected by changes between releases of Oracle Applications.

### **Do not rely on upward compatibility of the data model**

---

Oracle reserves the right to change the structure of Oracle Support tables, and to change the meaning of, add, or delete lookup codes and other data in future releases. We do not guarantee the upward compatibility of the Oracle Support data model. For example, if you write a report that identifies concurrent requests that end in Error status by selecting directly from Oracle Application Object Library tables, we do not guarantee that your report will work properly after an upgrade.

---

## **About Oracle Application Object Library**

The *Oracle Support Technical Reference Manual* may contain references to tables that belong to Oracle Application Object Library. Oracle Application Object Library is a collection of pre-built application components and facilities for building Oracle Applications and extensions to Oracle Applications. Oracle Application Coding Standards use the Oracle Application Object Library and contains shared components including but not limited to -- forms, subroutines, concurrent programs and reports, database tables and objects, messages, menus, responsibilities, flexfield definitions and online help.

**Attention:** Oracle does not support *any* customization of Oracle Application Object Library tables or modules, not even by Oracle consultants. (Oracle Application Object Library tables generally have names beginning with FND\_%.)

Accordingly, this manual does not contain detailed information about most Oracle Application Object Library tables used by Oracle Support.

---

## A Few Words About Terminology

The following list provides you with definitions for terms that we use throughout this manual:

### **Relationship**

---

A relationship describes any significant way in which two tables may be associated. For example, rows in the Journal Headers table may have a one-to-many relationship with rows in the Journal Lines table.

### **Database Diagram**

---

A database diagram is a graphic representation of application tables and the relationships between them.

### **Module**

---

A module is a program or procedure that implements one or more business functions, or parts of a business function, within an application. Modules include forms, concurrent programs and reports, and subroutines.

### **Application Building Block**

---

An application building block is a set of tables and modules (forms, reports, and concurrent programs) that implement closely-related database objects and their associated processing. Said another way, an application building block is a logical unit of an application.

### **QuickCodes**

---

QuickCodes let you define general purpose, static lists of values for window fields. QuickCodes allow you to base your program logic on lookup codes while displaying user-friendly names in a list of values

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

window. QuickCodes simplify name and language changes by letting you change the names your end users see, while the codes in your underlying programs remain the same.

---

## **Form**

A form is a module comprised of closely related windows that are used together to perform a task. For example, the Enter Journals form in Oracle General Ledger includes the Enter Journals window, the Batch window, and the More Actions window among others. The Enter Journals window is the main window, and from it, you can use buttons to navigate to other windows in the form. The form name usually corresponds to the main window in the form, and is frequently a window you open directly from the Navigator.

---

## **Other Information Sources**

### **Installation and System Administration**

---

## **Training**

Oracle Education offers a complete set of training courses to help you and your staff master Oracle CRM Applications. We can help you develop a training plan that provides thorough training for both your project team and your end users. We will work with you to organize courses appropriate to your job or area of responsibility.

Training professionals can show you how to plan your training throughout the implementation process so that the right amount of information is delivered to key people when they need it the most. You can attend courses at any one of our many Educational Centers, or you can arrange for our trainers to teach at your facility. In addition, we can tailor standard courses or develop custom courses to meet your needs.

---

## **Support**

From on-site support to central support, our team of experienced professionals provides the help and information you need to keep Oracle Support working for you. This team includes your Technical Representative, Account Manager, and Oracle's large staff of consultants and support specialists with expertise in your business

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

area, managing an Oracle server, and your hardware and software environment.

## About Oracle

Oracle Corporation develops and markets an integrated line of software products for database management, applications development, decision support, and office automation, as well as Oracle Applications, an integrated suite of more than 75 software modules for financial management, supply chain management, manufacturing, project systems, human resources, and sales and service management.

Oracle products are available for mainframes, minicomputers, personal computers, network computers, and personal digital assistants, allowing organizations to integrate different computers, different operating systems, different networks, and even different database management systems, into a single, unified computing and information resource.

Oracle is the world's leading supplier of software for information management, and the world's second largest software company. Oracle offers its database, tools, and applications products, along with related consulting, education, and support services, in over 145 countries around the world.

## Thank You

Thanks for using Oracle Support and this technical reference manual!

We appreciate your comments and feedback. After the Table of Contents of this manual is a Reader's Comment Form that you can use to explain what you like or dislike about Oracle Support or this technical reference manual. Mail your comments to the following address or call us directly at (650) 506-7000.

# High-Level Design

**T**his chapter presents a high-level design for Oracle Support that satisfies the business needs we specify during Strategy and Analysis. It contains database diagrams for Oracle Support application building blocks, lists of database tables and views, and a list of modules.

---

## Overview of High-Level Design

During High-Level Design, we define the application components (tables, views, and modules) we need to build our application. We specify what application components should do without specifying the details of *how* they should do it.

You can refer to this High-Level Design chapter to quickly acquaint yourself with the tables, views, and modules that comprise Oracle Support applications. And, you can prepare yourself to understand the detailed design and implementation of Oracle Support.

---

## Database Diagrams

The Database Diagrams section graphically represents all Oracle Support applications tables and the relationships between them, organized by building block.

Use this section to quickly learn what tables each Oracle Support application building block uses, and how those tables interrelate. Then, you can refer to the Table and View Definitions sections of Chapter 3 for more detailed information about each of those tables.

---

## Table Lists

The Table List sections list the Oracle Support applications tables. Because a product might not include at least one table for each type, this Technical Reference Manual might not include each of the following sections.

### Public Tables

---

Use the Public Table List section to quickly identify the tables you are most interested in. Then, you can refer to the Table and View Definitions sections of Chapter 3 for more detailed information about those tables.

In addition, this manual may contain full documentation for one or more of the following Application Object Library tables: FND\_DUAL, FND\_CURRENCIES, and FND\_COMMON\_LOOKUPS.

## **Internal Tables**

---

This section includes a list of private, internal tables used by Oracle Support; we do not provide additional documentation for these tables.

---

## **View Lists**

The View List sections list the Oracle Support views, with one section for each type of view. Because a product might not include at least one view for each type, this Technical Reference Manual might not include each of the following sections.

Use this section to quickly identify the views you are most interested in. Then, you can refer to the Table and View Definitions sections of Chapter 3 for more detailed information about those views.

### **Public Views**

---

This section lists views that may be useful for your custom reporting or other data requirements. The list includes a description of the view, and the page in Chapter 3 that gives detailed information about the public view.

### **Web Views**

---

This section lists views that you may need to configure your Self-Service Web applications. The list includes a description of the view, and the page in Chapter 3 that gives detailed information about the web view.

### **Forms and Table Views**

---

This section lists supplementary views that are not essential to the Release 11i data model, but simplify coding or improve performance for Oracle Developer.

### **Internal Views**

---

This section includes each private, internal view that Oracle Support uses.

## **Multiple Reporting Currency Views**

---

This list includes views that were created to support the Multiple Reporting Currencies feature.

---

## **Module List**

The Module List section briefly describes each of the Oracle Support applications modules. This section lists forms, reports, and concurrent programs.

A form is a module comprised of closely related windows that are used together to perform a task. For example, the Enter Journals form in Oracle General Ledger includes the Enter Journals window, the Batch window, and the More Actions window. The Enter Journals window is the main window, and from it, you can use buttons to navigate to other windows in the form. The form name usually corresponds to the main window in the form, and is frequently a window you can open directly from the Navigator.

The Reports and Concurrent Programs lists include processes you can submit from the Submit Requests window or other windows, as well as processes that are submitted automatically by Oracle Support. Use your user's guide to learn more about reports and concurrent processes.

## Database Diagramming Conventions

We use the following notational conventions in our database diagrams:

**Figure 2 – 1**  
**Database Diagram**  
**Conventions**

**Tables** – are the basic unit of storage in the database. A hand symbol preceding the title in the table's title bar indicates that the table is not owned by this application but shared with another.

**Foreign key constraint** – is a type of referential integrity constraint for checking the integrity of data entered in a specific column or set of columns. This specified column or set of columns is known as the foreign key.

**Delete rule indicator** – determines the action to be taken when an attempt is made to delete a related row in a join table. A line through the foreign key constraint, as shown on the above diagram, indicates that this action is restricted.

**Arcs** – specify that, for any given row in a table, a value must be entered in one of the arc columns. The remaining columns within the arc must be null.

## Database Diagrams

This section graphically represents most of the significant Oracle Support tables and the relationships between them, organized by building block. Use this section to quickly learn what tables each Oracle Support application building block uses, and how these tables interrelate. Then, you can refer to the Table and View Definitions sections of Chapter 3 for more detailed information about each of those tables.

This section contains a database diagram for each of the following Oracle Support application building blocks:

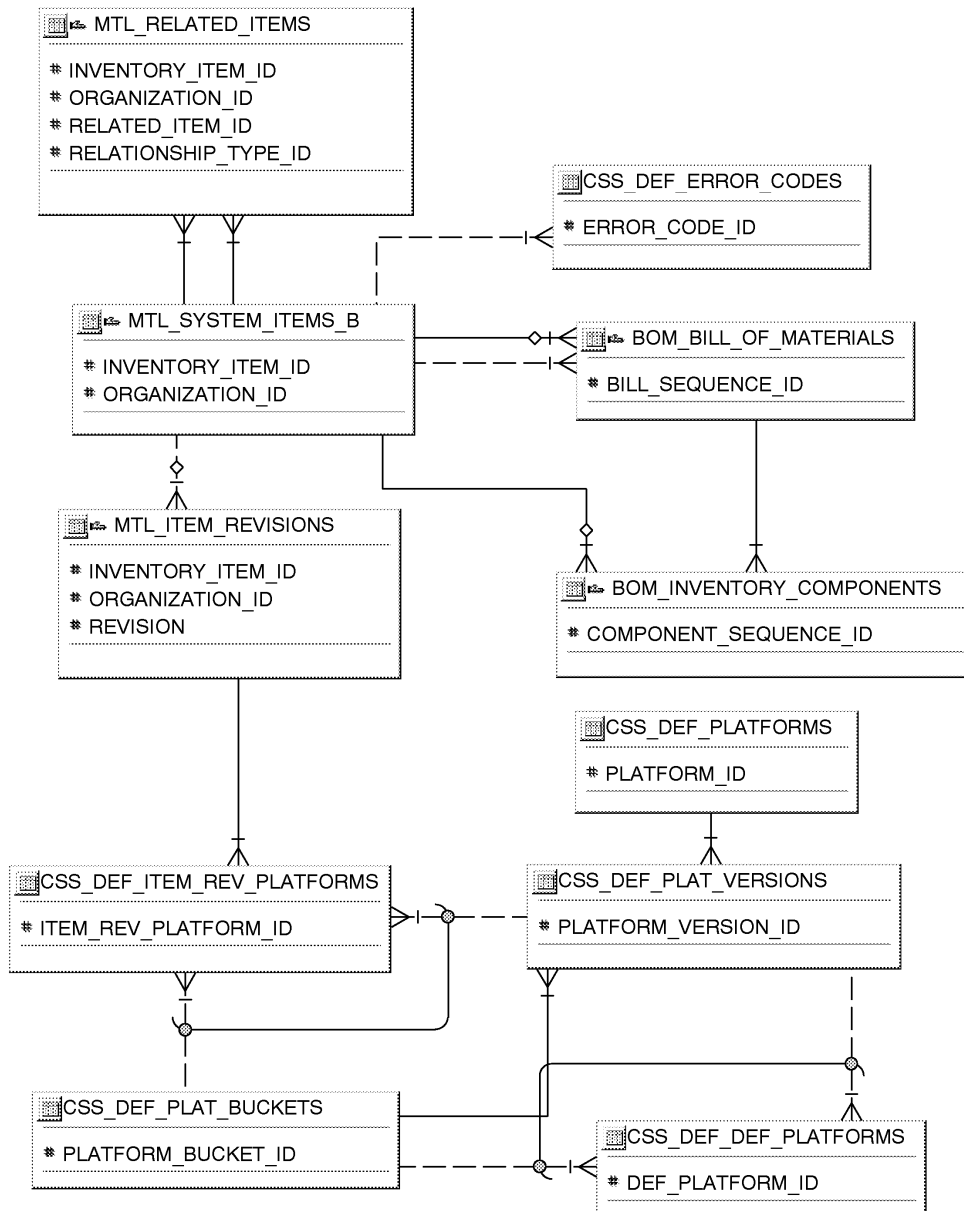

- Diagram 1: Products
- Diagram 2: Patches
- Diagram 3: Defects
- Diagram 4: Other Setups

Some tables, especially important reference tables, appear in more than one database diagram. When several building blocks use a table, we show that table in each appropriate database diagram.

## Other Setups

## Public Table List

This section lists each public database table that Support uses and provides a brief description of each of those tables. The page reference is to the table description in Chapter 3.

Note that "public" tables are not necessarily intended for write access by custom code; Oracle Corporation supports write access using only standard Oracle Applications forms, reports, and programs, or any SQL write access to tables explicitly documented as API tables. For more information, see the How Not To Use This Manual section of this book's Introduction.

Support uses the following Public tables:

Table Name	Description
BOM_BILL_OF_MATERIALS	Bills of material (See page 3 – 7)
BOM_INVENTORY_COMPONENTS	Bill of material components (See page 3 – 10)
CSS_DEF_ATTACHMENTS	Attachments associated with a defect. (See page 3 – 15)
CSS_DEF_AUDITS	Defect audit history (See page 3 – 16)
CSS_DEF_DEFECTS_ALL	Defect or Enhancement main table. (See page 3 – 18)
CSS_DEF_DEFECT_LINKS	Identifies a link from one Defect to another. (See page 3 – 22)
CSS_DEF_DEF_CONTACTS	Intersection table between CSS_DEF_DEFECTS_ALL and JTF_RS_RESOURCE_EXTNS (See page 3 – 23)
CSS_DEF_DEF_ERROR_CODES	Intersection table between css_def_error_codes and css_def_defects_all (See page 3 – 25)
CSS_DEF_DEF_FIXES	Intersection table between table CSS_DEF_DEFECTS_ALL and table CSS_DEF_FIXES (See page 3 – 26)
CSS_DEF_DEF_LANGUAGES	Intersection table between CSS_DEF_DEFECTS_ALL and CSS_DEF_LANGUAGES (See page 3 – 27)
CSS_DEF_DEF_PLATFORMS	Intersection table between CSS_DEF_DEFECTS_ALL and either CSS_DEF_PLAT_BUCKETS or CSS_DEF_PLAT_VERSIONS (See page 3 – 28)
CSS_DEF_DEF_SOURCES	Intersection table between CSS_DEF_DEFECTS_ALL and either CSS_DEF_SOURCES or CSS_DEF_SRC_VERSIONS (See page 3 – 29)
CSS_DEF_ERROR_CODES	Error code definition (See page 3 – 30)

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

CSS_DEF_FIXES	Available fixes for a defect (See page 3 – 31)
CSS_DEF_FIXES_FIX_SOURCES	Relationship table between table CSS_DEF_FIXES and table CSS_DEF_SRC_VERSIONS (See page 3 – 32)
CSS_DEF_FIX_SET	Fix sets, grouping of fixes. (See page 3 – 33)
CSS_DEF_ITEM_REV_PLATFORMS	Intersection table between MTL_ITEM_REVISIONS and either CSS_DEF_PLAT_BUCKETS or CSS_DEF_PLAT_VERSIONS. (See page 3 – 34)
CSS_DEF_ITEM_REV_PLAT_FIXES	Intersection table between table CSS_DEF_ITEM_REV_PLATFORMS and table CSS_DEF_FIXES (See page 3 – 36)
CSS_DEF_ITEM_REV_SRC_VER	Intersection table between table CSS_DEF_ITEM_REV_PLATFORMS and table CSS_DEF_SRC_VERSIONS. (See page 3 – 37)
CSS_DEF_LANGUAGES	Supported languages for a product (See page 3 – 38)
CSS_DEF_PHASES_B	Base table for phases definition (See page 3 – 39)
CSS_DEF_PHASES_TL	Translatable table for phase definition (See page 3 – 40)
CSS_DEF_PLATFORMS	A reference table for Defect Platforms (See page 3 – 41)
CSS_DEF_PLAT_BUCKETS	A reference table of Defect Platform Buckets. (See page 3 – 42)
CSS_DEF_PLAT_FIX_SET	Intersection table between table CSS_DEF_ITEM_REV_PLAT_FIXES and table CSS_DEF_FIX_SET (See page 3 – 43)
CSS_DEF_PLAT_VERSIONS	A reference table of Defect Platform Versions (See page 3 – 44)
CSS_DEF_PRIORITIES_B	A reference table for Defect Prioritie (See page 3 – 45)
CSS_DEF_PRIORITIES_TL	Translatable defect Priority information. (See page 3 – 46)
CSS_DEF_PROB_CATEGORIES_B	Base table for defect problem category (See page 3 – 47)
CSS_DEF_PROB_CATEGORIES_TL	Translatable table for defect problem category (See page 3 – 48)
CSS_DEF_PROB_TYPES_B	Base table for problem types (See page 3 – 49)
CSS_DEF_PROB_TYPES_TL	Translation table for problem types (See page 3 – 50)

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

CSS_DEF_PROB_TYPE_PHASES	Intersection table between css_def_prob_types_b and css_def_phases_b (See page 3 – 51)
CSS_DEF_QCACHE_DETAILS	This table holds temporary information for cache detail product information (See page 3 – 52)
CSS_DEF_QCACHE_HEADERS	This table holds temporary information for cache product identifier (See page 3 – 53)
CSS_DEF_RELATED_FIXES	Fix relationships (See page 3 – 54)
CSS_DEF_RES_TIMES	A reference table of Defect Response and Resolution Times (See page 3 – 55)
CSS_DEF_SEVERITIES_B	A reference table of Defect Severities (See page 3 – 57)
CSS_DEF_SEVERITIES_TL	Translatable Defect Severity information (See page 3 – 58)
CSS_DEF_SOURCES	The table stores the source name of fix (See page 3 – 59)
CSS_DEF_SRC_VERSIONS	Source version of fixes (See page 3 – 60)
CSS_DEF_STATUSES_B	Base table holds information for all existing statuses (See page 3 – 61)
CSS_DEF_STATUSES_TL	Translatable table holds information for all existing statuses (See page 3 – 62)
CSS_DEF_STAT_REASONS_B	Base table holds information for all existing status reasons (See page 3 – 63)
CSS_DEF_STAT_REASONS_TL	Translatable table holds information for all existing status reasons (See page 3 – 64)
CSS_DEF_TASKS	Table holds information about all the tasks that related to defect (See page 3 – 65)
CSS_DEF_TEMPLATES	Table holds information about templates (See page 3 – 66)
CSS_DEF_TEMPL_DETAILS	Table holds information about template details (See page 3 – 67)
CSS_DEF_TEMPL_MATRIX	Table holds information about template matrix (See page 3 – 68)
CS_INCIDENTS_ALL_B	This table stores non-translated information about service requests. (See page 3 – 70)

CS_INCIDENT_LINKS	This table stores information on relationships to other service requests. (See page 3 – 75)
CS_INCIDENT_LINKS_EXT	This table stores information on relationships to other documents. (See page 3 – 77)
CS_KB_SETS_B	Knowledge base sets (base table). (See page 3 – 79)
CS_KB_SET_LINKS	Knowledge base set links. This table implements the one to many relationship between a set and external entities. (See page 3 – 80)
FND_ATTACHED_DOCUMENTS	Attached documents
FND_LANGUAGES	National dialects
FND_LOBS	LOBs being managed by the Generic File Manager
JTF_NOTES_B	Non-translated base table for Notes module. (See page 3 – 82)
JTF_RS_RESOURCE_EXTNS	This is table stores all important information about Resources. These Resources are coming from HR or HZ or Vonder table etc. Primary key is resource_id. Resource_number, user_id sre also unique keys. (See page 3 – 83)
JTF_TASKS_B	Base Table JTF_TASKS_B stores general information about a given Task. (See page 3 – 86)
MTL_CATEGORIES_B	Code combinations table for item categories (See page 3 – 89)
MTL_ITEM_REVISIONS	Item revisions (See page 3 – 91)
MTL_RELATED_ITEMS	Item relationships (See page 3 – 93)
MTL_SYSTEM_ITEMS_B	Inventory item definitions (See page 3 – 95)
MTL_UNITS_OF_MEASURE_TL	Unit of measure definitions (See page 3 – 114)

## Public View List

This section lists each public database view that Oracle Support uses and provides a brief description of each of those views. These views may be useful for your custom reporting or other data requirements. The page reference is to the detailed view description in Chapter 3.

Oracle Support uses the following public views:

<b>View Name</b>	<b>Description</b>
CSS_DEF_COMPONENTS_V	Product components
CSS_DEF_DEFECTS_ALL_NO_RES_V	Defect information without resource information
CSS_DEF_DEFECTS_ALL_V	Defect information

## Internal View List

This section lists each private, internal view that Oracle Support uses.

**Warning:** Oracle Corporation does not support access to Oracle Applications data using these views, except from standard Oracle Applications forms, reports, and programs.

Oracle Support uses the following internal views:

- `CSS_BRM_3D_DEFECT_V`

---

## Multilingual View List

This section lists each MultiLingual database view that Oracle Support uses. MultiLingual views were created to allow certain seed data to be available in multiple national languages simultaneously.

Oracle Support uses the following Multilingual views:

- FND\_LOOKUP\_VALUES\_VL

---

## Module List

Oracle Support uses no additional forms, reports, or concurrent programs.

# Detailed Design

**T**his chapter presents a detailed design for implementing Oracle Support. It contains detailed definitions of tables and views that you may need to reference to write custom reports or use for other data extraction.

---

## Overview of Detailed Design

During Detailed Design, we specify in detail how each applications component should work. We prepare detailed definitions of tables and views.

You can refer to this Detailed Design chapter to gain a detailed understanding of the underlying structure and processing of Oracle Support that enables you to:

- Convert existing application data
- Integrate your Oracle Support application with your other applications systems
- Write custom reports
- Define alerts against Oracle Applications tables
- Create views for decision support queries using query tools

---

## Table and View Definitions

The Table and View Definitions section contains a detailed definition of Oracle Support applications tables. For each table, it provides information about primary keys, foreign keys, QuickCodes, indexes, triggers, and sequences. It also gives you a detailed description of each column and its characteristics. In addition, it provides the SQL statement that defines each view. Review this section to get a detailed understanding of what tables your Oracle Support application contains, and how it uses them to hold and access the information it needs.

---

## Table and View Definitions

This section contains a detailed description of each Oracle Support table and view that you may need to reference. For each table, it presents detailed information about:

- Primary keys
- Foreign keys
- Column descriptions
- Indexes
- Oracle sequences
- Triggers
- View derivations

Because Oracle does not support customization of Oracle Application Object Library tables, we do not provide you with detailed information about them. Consequently, this section does not document all the FND\_% tables Oracle Support uses.

The following sections appear in each table or view description:

---

### Foreign Keys

To help you understand the relationships between tables, we list each foreign key contained in a table. For each foreign key in a table, we list the primary key table name (the table to which a foreign key refers), its corresponding primary key columns, and the foreign key columns that refer to those primary key columns.

When the primary key table has a composite primary key, we list each column of the composite key sequentially.

If a table contains two or more distinct foreign keys that refer to the same primary key table, we repeat the primary key table name and list each of the distinct foreign keys separately.

---

### QuickCodes Columns

When a database column contains a QuickCodes value, which we implement using a foreign key to FND\_LOOKUPS, MFG\_LOOKUPS, or to some other lookup table, we list the QuickCodes type (lookup

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

type) to which the QuickCodes value must belong and a complete list of QuickCodes values and meanings. Some QuickCodes can be defined by you in the application. These values are designated as User-defined.

---

## Column Descriptions

We list the important characteristics of each column in a table or view. These characteristics include whether the column is part of the table's primary key, whether Oracle8i requires a value for this column, and the data type of the column. We also give you a brief description of how Oracle Support uses the column.

When a column is part of a table's primary key, we append the notation (PK) to the name of that column.

To help you understand which columns Oracle Support uses and which columns it does not use, we alert you to any unused column. When no module uses a database column, we show one of the following legends in the Description column:

<b>Not currently used</b>	Oracle Support does not use this column, although the column might be used in a future release.
<b>No longer used</b>	Oracle Support no longer uses this column. AutoInstall installs this column. Subsequent versions of Oracle Support might not include this column.
<b>No longer installed</b>	Oracle Support no longer uses this column. If you <i>upgraded</i> your software from an earlier version, you may still have this column, depending upon whether you chose to delete it during an upgrade process. If you <i>install</i> Oracle Support, you do not have this column.

### Standard Who Columns

---

Most Oracle Support tables contain standard columns to support \ **Row Who**. When your program or SQL\*Plus command selects a row from a table, use these columns to determine who last updated the row. If your program or SQL\*Plus command updates or inserts a row in an interface table, you must populate each of the five standard Who columns:

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

<b>LAST_UPDATE_DATE</b>	Date when a user last updated this row
<b>LAST_UPDATED_BY</b>	User who last updated this row (foreign key to FND_USER.USER_ID)
<b>CREATION_DATE</b>	Date when this row was created
<b>CREATED_BY</b>	User who created this row (foreign key to FND_USER.USER_ID)
<b>LAST_UPDATE_LOGIN</b>	Operating system login of user who last updated this row (foreign key to FND_LOGINS.LOGIN_ID). You should set this to NULL, or to 0 if NULL is not allowed

Since every table containing Who columns has several foreign keys to the tables FND\_USER and FND\_LOGINS, we do not include the foreign key columns LAST\_UPDATED\_BY, CREATED\_BY, or LAST\_UPDATE\_LOGIN in a table's list of foreign keys.

### **Additional Who Columns for Concurrent Programs**

---

Some Oracle Support tables also contain several additional Who columns to distinguish between changes a user makes with a form and changes a concurrent program makes. When a concurrent program updates or inserts a row in a table, the concurrent program populates the following additional Who columns:

<b>REQUEST_ID</b>	Concurrent request ID of program that last updated this row (foreign key to FND_CONCURRENT_REQUESTS.REQUEST_ID)
<b>PROGRAM_APPLICATION_ID</b>	Application ID of program that last updated this row (foreign key to FND_APPLICATION.APPLICATION_ID)
<b>PROGRAM_ID</b>	Program ID of program that last updated this row (foreign key to FND_CONCURRENT_PROGRAM.CONCURRENT_PROGRAM_ID)
<b>PROGRAM_UPDATE_DATE</b>	Date when a program last updated this row

Since every table containing these additional Who columns has several foreign keys to the tables FND\_CONCURRENT\_REQUESTS, FND\_APPLICATION, and FND\_CONCURRENT\_PROGRAM, we do not include the foreign key columns REQUEST\_ID,

PROGRAM\_APPLICATION\_ID, or PROGRAM\_ID in a table's list of foreign keys.

---

## Indexes

If an Oracle Support table uses an Oracle8i index, we list the database columns that comprise that index, in sequential order.

**Note:** The indexes we document in this manual correspond to unique keys we specified during product development and testing. In some cases, we may add additional indexes during the porting process to fine-tune performance on specific platforms; therefore, there may be minor differences between the indexes documented in this book and the indexes for production versions of Oracle Support.

---

## Sequences

Oracle Support uses Oracle8i sequence generators to generate unique integers. If any table column gets its value from an Oracle8i sequence generator, we list the name of the corresponding sequence generator and the name of the column that stores the unique integer.

---

## Database Triggers

If a table has one or more active database triggers, we provide a brief explanation of each database trigger and when it fires.

---

## View Derivation

For each Oracle Support view you may need to reference, we include important elements from the SQL statement that defines or creates a view. By studying this view definition, you can understand exactly how a view derives its contents.

## BOM\_BILL\_OF\_MATERIALS

BOM\_BILL\_OF\_MATERIALS stores information about manufacturing and engineering bills of material. Each row in this table represents a unique manufacturing or engineering bill and is identified by BILL\_SEQUENCE\_ID.

Oracle Bills of Material stores planning bills, model/option structures and standard bills in this table. The item's BOM\_ITEM\_TYPE attribute dictates the type of bill of material defined in this table. There is no identifier in this table that differentiates planning, model, option class, standard bills or product families.

If a bill shares its structure with another bill in the same or a different organization, COMMON\_BILL\_SEQUENCE\_ID refers to that common bill. This is a mandatory column that equals BILL\_SEQUENCE\_ID if there is no common bill reference.

If an engineering change order creates a new bill of material for an item, PENDING\_FROM\_ECN stores the ECO number that originates this new bill.

#### Database Triggers

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

Trigger Name : BOMTBOMX  
Trigger Time : AFTER  
Trigger Level : ROW  
Trigger Event : INSERT, UPDATE, DELETE

This trigger updates the REXPLODE\_FLAG in the BOM\_EXPLOSIONS table for the INSERT, UPDATE or DELETE of a row. For a product family this trigger nulls out the PRODUCT\_FAMILY\_ITEM\_ID column in the MTL\_SYSTEM\_ITEMS table for DELETES.

# BOM\_INVENTORY\_COMPONENTS

BOM\_INVENTORY\_COMPONENTS stores information about bills of material components. This table only stores single-level components. COMPONENT\_SEQUENCE\_ID uniquely identifies each row. There is one row per component on an operation within a given date range.

This table is the main child table of BOM\_BILL\_OF\_MATERIALS and references the parent using BILL\_SEQUENCE\_ID. It uses EFFECTIVITY\_DATE and DISABLE\_DATE to time phase components into a bill of material. The Bill of Material window enforces that only one row for a component in an operation is effective at a given time.

REVISED\_ITEM\_SEQUENCE\_ID points to the revised item on an ECO that affects a particular component row. If IMPLEMENTATION\_DATE is null, the component is pending on an engineering change that has not yet been implemented. IMPLEMENTATION\_DATE is either NULL (pending on ECO) or equals EFFECTIVITY\_DATE (implemented). OLD\_COMPONENT\_SEQUENCE\_ID points to the original component row affected by this component row through an engineering change.

This table also contains certain columns relating to shipping, billing and accounting for revenue on a customer order through Oracle Order Management. CHECK\_ATP determines if an ATP check is required for this item when placing an order and overrides the Item level ATP flag. LOW\_QUANTITY and HIGH\_QUANTITY define minimum and maximum quantities of this component item that can be placed on an order if the customer chooses to override COMPONENT\_QUANTITY. OPTIONAL decides if a component is a required option class you have to choose from (for Option Class items) or a required item (for Standard items) when taking an order. For Option Class items, MUTUALLY\_EXCLUSIVE\_OPTIONS decides if one or more of its components can be placed on an order when you pick this option class.

OPERATION\_LEAD\_TIME\_PERCENT is denormalized for performance from BOM\_OPERATION\_SEQUENCES when rolling up cumulative leadtimes.

The ORGANIZATION\_ID for the component can be derived from the BOM\_BILL\_OF\_MATERIALS table using BILL\_SEQUENCE\_ID.

## CS\_INCIDENTS\_ALL\_B

CS\_INCIDENTS\_ALL\_B stores information about service requests. A service request can be logged against any product, any product in inventory, or any product in the install base. Each row contains information about a single service request. This table is partitioned by ORG\_ID in a multi-organizational environment. This is the multi-language support base table and contains all of the fields from this table that are not translatable.

## MTL\_CATEGORIES\_B

MTL\_CATEGORIES\_B is the code combinations table for item categories. Items are grouped into categories within the context of a category set to provide flexible grouping schemes.

The item category is a key flexfield with a flex code of MCAT. The flexfield structure identifier is also stored in this table to support the ability to define more than one flexfield structure (multi-flex).

Item categories now support multilingual category description. MLS is implemented with a pair of tables: MTL\_CATEGORIES\_B and MTL\_CATEGORIES\_TL. MTL\_CATEGORIES\_TL table holds translated Description for Categories.

## MTL\_ITEM\_REVISIONS

MTL\_ITEM\_REVISIONS stores revision levels for an inventory item. When an item is defined a starting revision record is written out to this table, so every item will at least have one starting revision.

The presence of an engineering change notice code in this table indicates that the engineering system issued the revision through the implementation process. Along with the engineering change order, an implementation date and initiation date will be stored.

## MTL\_RELATED\_ITEMS

MTL\_RELATED\_ITEMS stores the relationships between items. All relationships are defined within the item master organization. Item relationships may be used to search for related and substitute items. Items defined with a substitute relationship to a given item may be received in place of the ordered item when substitutes are allowed.

RELATIONSHIP\_TYPE\_ID indicates whether the relationship is a 'Substitute' or 'Related' relationship.

RECIPROCAL\_FLAG indicates whether the relationship is reciprocal. Defining the relationship as reciprocal has the same effect as defining two separate relationships.

The view, MTL\_RELATED\_ITEMS\_VIEW, explodes the reciprocal relationships and may be used to view all item relationships regardless of how they are defined.

## MTL\_SYSTEM\_ITEMS\_B

MTL\_SYSTEM\_ITEMS\_B is the definition table for items. This table holds the definitions for inventory items, engineering items, and purchasing items. You can specify item-related information in fields such as: Bill of Material, Costing, Purchasing, Receiving, Inventory, Physical attributes, General Planning, MPS/MRP Planning, Lead times, Work in Process, Order Management, and Invoicing.

You can set up the item with multiple segments, since it is implemented as a flexfield. Use the standard 'System Items' flexfield that is shipped with the product to configure your item flexfield. The flexfield code is MSTK.

The primary key for an item is the INVENTORY\_ITEM\_ID and ORGANIZATION\_ID. Therefore, the same item can be defined in more than one organization.

Each item is initially defined in an item master organization. The user then assigns the item to other organizations that need to recognize this item; a row is inserted for each new organization the item is assigned to. Many columns such as MTL\_TRANSACTIONS\_ENABLED\_FLAG and BOM\_ENABLED\_FLAG correspond to item attributes defined in the MTL\_ITEM\_ATTRIBUTES table. The attributes that are available to the user depend on which Oracle applications are installed. The table MTL\_ATTR\_APPL\_DEPENDENCIES maintains the relationships between item attributes and Oracle applications.

Two unit of measure columns are stored in MTL\_SYSTEM\_ITEMS table. PRIMARY\_UOM\_CODE is the 3-character unit that is used throughout Oracle Manufacturing. PRIMARY\_UNIT\_OF\_MEASURE is the 25-character unit that is used throughout Oracle Purchasing.

Items now support multilingual description. MLS is implemented with a pair of tables: MTL\_SYSTEM\_ITEMS\_B and MTL\_SYSTEM\_ITEMS\_TL. Translations table (MTL\_SYSTEM\_ITEMS\_TL) holds item descriptions in multiple languages. DESCRIPTION column in the base table (MTL\_SYSTEM\_ITEMS\_B) is for backward compatibility and is maintained in the installation base language only.

PURCHASING_TAX_CODE	NULL	VARCHAR2(50)	Purchasing tax code
OVERCOMPLETION_TOLERANCE_TYPE	NULL	NUMBER	Overcompletion tolerance type
OVERCOMPLETION_TOLERANCE_VALUE	NULL	NUMBER	Overcompletion tolerance value
EFFECTIVITY_CONTROL	NULL	NUMBER	Effectivity control code. Indicates if the item is under Date Effectivity or Model/Unit Number Effectivity control.
CHECK_SHORTAGES_FLAG	NULL	VARCHAR2(1)	Flag indicating material shortages should be checked for this item
OVER_SHIPMENT_TOLERANCE	NULL	NUMBER	Over shipment tolerance
UNDER_SHIPMENT_TOLERANCE	NULL	NUMBER	Under shipment tolerance
OVER_RETURN_TOLERANCE	NULL	NUMBER	Over return tolerance
UNDER_RETURN_TOLERANCE	NULL	NUMBER	Under return tolerance
EQUIPMENT_TYPE	NULL	NUMBER	Flag indicating item is equipment
RECOVERED_PART_DISP_CODE	NULL	VARCHAR2(30)	Indicates return is required for recovered pars, scrap in field, which is used for spare parts
DEFECT_TRACKING_ON_FLAG	NULL	VARCHAR2(1)	Specifies whether a defect or bug can be filed against the product
USAGE_ITEM_FLAG	NULL	VARCHAR2(1)	Flag indicating an item represents usage. Usage items can be sold as a use of something
EVENT_FLAG	NULL	VARCHAR2(1)	Identifies item as an event
ELECTRONIC_FLAG	NULL	VARCHAR2(1)	Flag indicating an item exists only in electronic format and not physical
DOWNLOADABLE_FLAG	NULL	VARCHAR2(1)	Flag indicating an item is downloadable
VOL_DISCOUNT_EXEMPT_FLAG	NULL	VARCHAR2(1)	Indicates an item does not contribute to volume discount for any order
COUPON_EXEMPT_FLAG	NULL	VARCHAR2(1)	Indicates an item is excluded from coupons even if it is part of the group that any coupon applies
COMMS_NL_TRACKABLE_FLAG	NULL	VARCHAR2(1)	Identifies an item as network logistics trackable
ASSET_CREATION_CODE	NULL	VARCHAR2(30)	Used to specify when an asset should be created
COMMS_ACTIVATION_REQD_FLAG	NULL	VARCHAR2(1)	Indicates an item requires activation on a network
ORDERABLE_ON_WEB_FLAG	NULL	VARCHAR2(1)	Indicates whether an item is orderable on the web or not. iStore will only sell items with this flag to be true
BACK_ORDERABLE_FLAG	NULL	VARCHAR2(1)	If ATP failed, can item be back ordered

#### Database Triggers

Trigger Name : MTL\_SYSTEM\_ITEMS\_B\_T2\_IBE  
 Trigger Time : AFTER  
 Trigger Level : ROW  
 Trigger Event : DELETE

This trigger calls iStore procedures to update relationships, section-items and search tables that depend on MTL\_SYSTEM\_ITEMS\_B table.

Trigger Name : MTL\_SYSTEM\_ITEMS\_B\_T3\_IBE  
 Trigger Time : AFTER  
 Trigger Level : ROW  
 Trigger Event : UPDATE

This trigger calls iStore procedures to update relationships and section-items tables that depend on MTL\_SYSTEM\_ITEMS\_B table.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T6\_BOM  
 Trigger Time : AFTER  
 Trigger Level : ROW  
 Trigger Event : INSERT

This trigger creates categories corresponding to product family items being created. It also assigns product family items to their corresponding categories. The trigger uses data that has been stored in the BOM\_PFI\_PVT package PL/SQL tables by the row level trigger.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T1\_BOM  
Trigger Time : BEFORE  
Trigger Level : ROW  
Trigger Event : INSERT

This trigger stores product family item identifier used later by the statement level trigger for creation of the corresponding category when a new product family item is defined. It makes calls to the BOM\_PFI\_PVT package procedures.

Trigger Name : MTL\_SYSTEM\_ITEMS\_B\_T2\_BOM  
Trigger Time : BEFORE  
Trigger Level : ROW  
Trigger Event : DELETE

This trigger stores corresponding category identifier that is used later by the statement level trigger for deletion of the category when the product family item is deleted. It makes calls to BOM\_PFI\_PVT package procedures.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T3\_BOM  
Trigger Time : BEFORE  
Trigger Level : ROW  
Trigger Event : UPDATE

This trigger performs the following functions depending on conditions: 1. Creates product family category when item attribute BOM\_ITEM\_TYPE is updated to 5. 2. When the item attribute BOM\_ITEM\_TYPE is changed from 5 to any other value, the trigger stores corresponding category identifier for later deletion of the category by the statement level trigger. 3. Removes an item assignment to the corresponding product family category when the PRODUCT\_FAMILY\_ITEM\_ID column of that item is changed. 4. When the PRODUCT\_FAMILY\_ITEM\_ID column is changed to non-null, stores category ID in the BOM\_PFI\_PVT package PL/SQL table for an item assignment to that category later by the statement-level trigger.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T4\_BOM  
Trigger Time : AFTER  
Trigger Level : STATEMENT  
Trigger Event : UPDATE

This trigger performs the following functions depending on updates of the BOM\_ITEM\_TYPE and PRODUCT\_FAMILY\_ITEM\_ID columns: 1. Creates categories corresponding to product family items. 2. Assigns new product family items to their corresponding categories. 3. Deletes product family categories. The trigger uses data that has been stored in the BOM\_PFI\_PVT package PL/SQL tables by the row level trigger.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T5\_BOM  
Trigger Time : AFTER  
Trigger Level : ROW  
Trigger Event : DELETE

This trigger deletes categories corresponding to product family items being deleted. The trigger uses data that has been stored in the BOM\_PFI\_PVT package PL/SQL tables by the row level trigger.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T1  
Trigger Time : BEFORE  
Trigger Level : ROW  
Trigger Event : UPDATE

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

The trigger is executed when the `COSTING_ENABLED_FLAG` field in the `MTL_SYSTEM_ITEMS` table is modified from Yes to No or vice versa. Before updating `COSTING_ENABLED_FLAG` field, the trigger performs the following tasks for each record that is modified:

- Insert a record into `CST_ITEM_COSTS` table if `COSTING_ENABLED_FLAG` field is changed from No to Yes.
- Delete a record from `CST_ITEM_COSTS` table if `COSTING_ENABLED_FLAG` field is changed from Yes to No.

## MTL\_UNITS\_OF\_MEASURE\_TL

MTL\_UNITS\_OF\_MEASURE\_TL is the definition table for both the 25-character and the 3-character units of measure. The base\_uom\_flag indicates if the unit of measure is the primary unit of measure for the uom\_class. Oracle Inventory uses this table to keep track of the units of measure used to transact an item. This table is also used by Oracle Purchasing, Oracle Order Management and Oracle Shipping Execution.
