This Technical Reference Manual (TRM) in any form, software or printed matter, contains proprietary information of Oracle Corporation; it is provided under an Oracle Corporation agreement containing restrictions on use and disclosure and is also protected by copyright, patent, and other intellectual property law. Restrictions applicable to this TRM include, but are not limited to: (a) exercising either the same degree of care to safeguard the confidentiality of this TRM as you exercise to safeguard the confidentiality of your own most important Confidential Information or a reasonable degree of care, whichever is greater; (b) maintaining agreements with your employees and agents that protect the Confidential Information of third parties such as Oracle Corporation and instructing such employees and agents of these requirements for this TRM; (c) restricting disclosure of this TRM to those of your employees who have a "need to know" consistent with the purposes for which this TRM was disclosed to you; (d) maintaining this TRM at all times on your premises; (e) not removing or destroying any proprietary or confidential legends or markings placed upon this TRM in whatever form, software or printed matter; and (f) not reproducing or transmitting this TRM in any form or by any means, electronic or mechanical, for any purpose, without the express written permission of Oracle Corporation. You should not use this TRM in any form, software or printed matter, to create software that performs the same or similar functions as any Oracle Corporation products.

The information in this TRM is subject to change without notice. If you find any problems in the TRM in any form, software or printed matter, please report them to us in writing. Oracle Corporation does not warrant that this TRM is error-free. This TRM is provided to customer "as-is" with no warranty of any kind. This TRM does not constitute Documentation as that term is defined in Oracle's agreements.

Reverse engineering of the Programs (software and documentation) associated with this TRM are prohibited. The Programs associated with this TRM are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be licensee's responsibility to take all appropriate fail-safe, back-up, redundancy and other measures to ensure the safe use of such applications if the Programs are used for such purposes, and Oracle disclaims liability for any damages caused by such use of the Programs.

#### Restricted Rights Legend

This TRM and the Programs associated with this TRM delivered subject to the DOD FAR Supplement are 'commercial computer software' and use, duplication and disclosure of the TRM and the Programs associated with this TRM shall be subject to the licensing restrictions set forth in the applicable Oracle license agreement. Otherwise, this TRM and the Programs associated with this TRM delivered subject to the Federal Acquisition Regulations are 'restricted computer software' and use, duplication and disclosure of the TRM and the Programs associated with this TRM shall be subject to the restrictions in FAR 52.227-14, Rights in Data --- General, including Alternate III (June 1987). # Introduction

**T**he *Oracle Work in Process Technical Reference Manual* provides the information you need to understand the underlying structure of Oracle Work in Process. After reading this manual, you should be able to convert your existing applications data, integrate your existing applications with Oracle Work in Process, and write custom reports for Oracle Work in Process, as well as read data that you need to perform other tasks.

This chapter introduces you to the *Oracle Work in Process Technical Reference Manual*, and explains how to use it.

---

# Introduction

At Oracle, we design and build applications using Oracle Designer, our systems design technology that provides a complete environment to support developers through all stages of a systems life cycle. Because we use a repository-based design toolset, all the information regarding the underlying structure and processing of our applications is available to us online. Using Oracle Designer, we can present this information to you in the form of a technical reference manual.

This *Oracle Work in Process Technical Reference Manual* contains detailed, up-to-date information about the underlying structure of Oracle Work in Process. As we design and build new releases of Oracle Work in Process, we update our Oracle Designer repository to reflect our enhancements. As a result, we can always provide you with an *Oracle Work in Process Technical Reference Manual* that contains the latest technical information as of the publication date. Note that after the publication date we may have added new indexes to Oracle Work in Process to improve performance.

---

## About this Manual

This manual describes the Oracle Applications Release 11i data model, as used by Work in Process; it discusses the database we include with a fresh install of Oracle Applications Release 11i. If you have not yet upgraded to Release 11i, your database may differ from the database we document in this book.

If you have upgraded from a previous release, you might find it helpful to use this manual with the appropriate *Oracle Applications Product Update Notes* manual. The product update notes list database changes and seed data changes in Oracle Work in Process between releases. The *Oracle Applications Product Update Notes Release 11* manual describes the changes between Release 10.7 and Release 11, and the *Oracle Applications Product Update Notes Release 11i* manual describes the changes between Release 11 and Release 11i.

You can contact your Oracle representative to confirm that you have the latest technical information for Work in Process. You can also use *Oracle MetaLink* which is accessible through Oracle's Support Web Center ([http://www.oracle.com/support/elec\\_sup](http://www.oracle.com/support/elec_sup)).

---

## Finding the Latest Information

The *Oracle Work in Process Technical Reference Manual* contains the latest information as of the publication date. For the latest information we encourage you to use *OracleMetaLink* which is accessible through Oracle's Support Web Center ([http://www.oracle.com/support/elec\\_sup](http://www.oracle.com/support/elec_sup)).

---

## Audience

The *Oracle Work in Process Technical Reference Manual* provides useful guidance and assistance to:

- Technical End Users
- Consultants
- Systems Analysts
- System Administrators
- Other MIS professionals

This manual assumes that you have a basic understanding of structured analysis and design, and of relational databases. It also assumes that you are familiar with Oracle Application Object Library and Oracle Work in Process. If you are not familiar with the above products, we suggest that you attend one or more of the training classes available through Oracle Education (see: Other Information Sources: page 1 – 8).

---

## How This Manual is Organized

This manual contains two major sections, High-Level Design and Detailed Design.

### High-Level Design

---

This section, Chapter 2, contains database diagrams and lists each database table and view that Work in Process uses. This chapter also has a list of modules.

## **Detailed Design**

---

This section, Chapter 3, contains a detailed description of the Work in Process database design, including information about each database table and view you might need for your custom reporting or other data requirements.

---

## How to Use This Manual

The *Oracle Work in Process Technical Reference Manual* is a single, centralized source for all the information you need to know about the underlying structure and processing of Oracle Work in Process. For example, you can use this manual when you need to:

- Convert existing application data
- Integrate your Work in Process application with your other applications systems
- Write custom reports
- Define alerts against Oracle Applications tables
- Configure your Oracle Self-Service Web Applications
- Create views for decision support queries using query tools
- Create business views for Oracle Discoverer

You need not read this manual cover to cover. Use the table of contents and index to quickly locate the information you need.

---

## How Not To Use This Manual

---

### **Do not use this manual to plan modifications**

You should not use this manual to plan modifications to Oracle Work in Process. Modifying Oracle Work in Process limits your ability to upgrade to future releases of your Work in Process application. In addition, it interferes with our ability to give you the high-quality support you deserve.

We have constructed Oracle Work in Process so that you can customize it to fit your needs without programming, and you can integrate it with your existing applications through interface tables. However, should you require program modifications, you should contact our support team (see: Other Information Sources; page 1 – 8). They can put you in touch with Oracle Services, the professional consulting organization of Oracle. Their team of experienced applications professionals can make the modifications you need while ensuring upward compatibility with future product releases.

### **Do not write data into non-interface tables**

---

Oracle reserves the right to change the structure of Oracle Applications tables, and to change the meaning of, add, or delete lookup codes and data in future releases. Do not write data directly into or change data in non-interface tables using SQL\*Plus or other programming tools because you risk corrupting your database and interfering with our ability to support you.

Moreover, this version of the *Oracle Work in Process Technical Reference Manual* does not contain complete information about the dependencies between Work in Process applications tables. Therefore, you should write data into only those tables we identify as interface tables. If you write data into other non-interface tables, you risk violating your data integrity since you might not fulfill all the data dependencies in your Work in Process application.

You are responsible for the support and upgrade of the logic within the procedures that you write, which may be affected by changes between releases of Oracle Applications.

### **Do not rely on upward compatibility of the data model**

---

Oracle reserves the right to change the structure of Oracle Work in Process tables, and to change the meaning of, add, or delete lookup codes and other data in future releases. We do not guarantee the upward compatibility of the Oracle Work in Process data model. For example, if you write a report that identifies concurrent requests that end in Error status by selecting directly from Oracle Application Object Library tables, we do not guarantee that your report will work properly after an upgrade.

---

## **About Oracle Application Object Library**

The *Oracle Work in Process Technical Reference Manual* may contain references to tables that belong to Oracle Application Object Library. Oracle Application Object Library is a collection of pre-built application components and facilities for building Oracle Applications and extensions to Oracle Applications. Oracle Application Coding Standards use the Oracle Application Object Library and contains shared components including but not limited to -- forms, subroutines, concurrent programs and reports, database tables and objects, messages, menus, responsibilities, flexfield definitions and online help.

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

**Attention:** Oracle does not support *any* customization of Oracle Application Object Library tables or modules, not even by Oracle consultants. (Oracle Application Object Library tables generally have names beginning with FND\_%.)

Accordingly, this manual does not contain detailed information about most Oracle Application Object Library tables used by Oracle Work in Process.

---

## A Few Words About Terminology

The following list provides you with definitions for terms that we use throughout this manual:

### **Relationship**

---

A relationship describes any significant way in which two tables may be associated. For example, rows in the Journal Headers table may have a one-to-many relationship with rows in the Journal Lines table.

### **Database Diagram**

---

A database diagram is a graphic representation of application tables and the relationships between them.

### **Summary Database Diagram**

---

A summary database diagram shows the most important application tables and the relationships between them. It omits tables and relationships that contribute little to the understanding of the application data model. Typically, a summary database diagram shows tables that contain key reference and transaction data.

### **Module**

---

A module is a program or procedure that implements one or more business functions, or parts of a business function, within an application. Modules include forms, concurrent programs and reports, and subroutines.

### **Application Building Block**

---

An application building block is a set of tables and modules (forms, reports, and concurrent programs) that implement closely-related

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

database objects and their associated processing. Said another way, an application building block is a logical unit of an application.

---

### **QuickCodes**

QuickCodes let you define general purpose, static lists of values for window fields. QuickCodes allow you to base your program logic on lookup codes while displaying user-friendly names in a list of values window. QuickCodes simplify name and language changes by letting you change the names your end users see, while the codes in your underlying programs remain the same.

---

### **Form**

A form is a module comprised of closely related windows that are used together to perform a task. For example, the Enter Journals form in Oracle General Ledger includes the Enter Journals window, the Batch window, and the More Actions window among others. The Enter Journals window is the main window, and from it, you can use buttons to navigate to other windows in the form. The form name usually corresponds to the main window in the form, and is frequently a window you open directly from the Navigator.

---

## **Other Information Sources**

There are additional information sources, including other documentation, training and support services, that you can use to increase your knowledge and understanding of Oracle Designer, Oracle Application Object Library, and Oracle Work in Process. We want to make these products easy for you and your staff to understand and use.

---

### **Oracle Designer Online Documentation**

The online help for Oracle Designer describes how you can use Oracle Designer for your development needs.

---

### **Oracle Applications Developer's Guide**

This guide contains the coding standards followed by the Oracle Applications development staff. It describes the Oracle Application Object Library components needed to implement the Oracle Applications user interface described in the *Oracle Applications User*

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

*Interface Standards.* It also provides information to help you build your custom Developer forms so that they integrate with Oracle Applications.

---

### **Oracle Applications User Interface Standards**

This manual contains the user interface (UI) standards followed by the Oracle Applications development staff. It describes the UI for the Oracle Applications products and how to apply this UI to the design of an application built using Oracle Forms 6.

---

### **Oracle Work in Process User Guide**

Your user guide provides you with all the information you need to use your Release 11i Work in Process application. Each user guide is organized for fast, easy access to detailed information in a function- and task-oriented organization.

---

### **Oracle Self-Service Web Applications Online Documentation**

This documentation describes how Oracle Self-Service Web Applications enable companies to provide a self-service and secure Web interface for employees, customers, and suppliers. Employees can change their personal status, submit expense reports, or request supplies. Customers can check on their orders, and suppliers can share production schedules with their trading partners. This documentation is available in HTML only.

---

### **Oracle Applications Flexfields Guide**

This guide provides flexfields planning, setup and reference information for the Work in Process implementation team, as well as for users responsible for the ongoing maintenance of Oracle Applications product data. This manual also provides information on creating custom reports on flexfields data.

---

### **Oracle Workflow Guide**

This manual explains how to define new workflow business processes as well as customize existing Oracle Applications-embedded workflow processes. You also use this guide to complete the setup steps necessary for any Oracle Applications product that includes workflow-enabled processes.

## **Oracle Alert User Guide**

---

This manual explains how to define periodic and event alerts to monitor the status of your Oracle Applications data.

## **Multiple Reporting Currencies in Oracle Applications**

---

If you use the Multiple Reporting Currencies feature to report and maintain accounting records in more than one currency, use this manual before implementing Work in Process. This manual details additional steps and setup considerations for implementing Work in Process with this feature.

## **Multiple Organizations in Oracle Applications**

---

If you use the Oracle Applications Multiple Organization Support feature to use multiple sets of books for one Work in Process installation, use this guide to learn about setting up and using Work in Process with this feature. This book describes the Oracle Applications organization model, which defines business units and the relationships between them in an arbitrarily complex enterprise. Functional and technical overviews of multiple organizations are presented, as well as information about how to set up and implement this feature set in the relevant Oracle Applications products.

## **Oracle Manufacturing, Distribution, Sales and Service Open Interfaces Manual**

---

This manual contains up-to-date information about integrating with other Oracle Manufacturing applications and with your other systems. This documentation includes open interfaces found in Oracle Manufacturing.

## **Oracle Applications Messages Manual**

---

The Oracle Applications Messages Manual contains the text of numbered error messages in Oracle Applications. (Oracle Applications messages begin with the prefix "APP-".) It also provides information on the actions you take if you get a message. Note: This manual is available only in HTML format.

# Installation and System Administration

## **Oracle Applications Installation Release Notes**

---

This manual contains a road map to the components of the release, including instructions about where to access the Release 11i documentation set.

## **Oracle Applications Concepts**

---

Designed to be the first book the user reads to prepare for an installation of Oracle Applications. It explains the technology stack, architecture, features and terminology for Oracle Applications Release 11i. This book also introduces the concepts behind and major uses of Applications-wide features such as MRC, BIS, languages and character sets (NLS, MLS), BIS, Self-Service Web Applications and so on.

## **Installing Oracle Applications**

---

Describes the One-Hour Install process, the method by which Release 11i will be installed. This manual includes all how-to steps, screen shots and information about Applications-wide post-install tasks.

## **Using the AD Utilities**

---

This manual contains how-to steps, screen shots and other information required to run the various AD utilities such as AutoInstall, AutoPatch, AD Administration, AD Controller, Relink and so on. It also contains information about when and why you should use these utilities.

## **Upgrading Oracle Applications**

---

This manual contains all the product specific pre- and post-upgrade steps that are required to upgrade products from Release 10.7 (NCA, SC and character-mode) or Release 11 of Oracle Applications. This manual also contains an overview chapter that describes all the tasks necessary to prepare and complete a upgrade of Oracle Applications.

## **Oracle Applications System Administrator's Guide**

---

This manual provides planning and reference information for the Oracle Applications System Administrator. It contains information on how to define security, customize menus and manage concurrent processing.

## **Oracle Applications Product Update Notes**

---

This book contains a summary of each new feature we added since Release 11, as well as information about database changes and seed data changes that may affect your operations or any custom reports you have written. If you are upgrading from Release 10.7 you also need to read *Oracle Applications Product Update Notes Release 11*.

## **Oracle Self-Service Web Applications Implementation Manual**

---

This manual describes the setup steps for Oracle Self-Service Web Applications and the Web Applications Dictionary.

## **Oracle Applications Implementation Wizard User Guide**

---

If you are implementing more than one Oracle product, you can use the Oracle Applications Implementation Wizard to coordinate your setup activities. This guide describes how to use the wizard.

## **Other Information**

### **Training**

---

Oracle Education offers a complete set of training courses to help you and your staff master Oracle Applications. We can help you develop a training plan that provides thorough training for both your project team and your end users. We will work with you to organize courses appropriate to your job or area of responsibility.

Training professionals can show you how to plan your training throughout the implementation process so that the right amount of information is delivered to key people when they need it the most. You can attend courses at any one of our many Educational Centers, or you can arrange for our trainers to teach at your facility. In addition, we can tailor standard courses or develop custom courses to meet your needs.

### **Support**

---

From on-site support to central support, our team of experienced professionals provides the help and information you need to keep Oracle Work in Process working for you. This team includes your Technical Representative, Account Manager, and Oracle's large staff of consultants and support specialists with expertise in your business

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

area, managing an Oracle server, and your hardware and software environment.

---

## About Oracle

Oracle Corporation develops and markets an integrated line of software products for database management, applications development, decision support, and office automation, as well as Oracle Applications, an integrated suite of more than 75 software modules for financial management, supply chain management, manufacturing, project systems, human resources, and sales and service management.

Oracle products are available for mainframes, minicomputers, personal computers, network computers, and personal digital assistants, allowing organizations to integrate different computers, different operating systems, different networks, and even different database management systems, into a single, unified computing and information resource.

Oracle is the world's leading supplier of software for information management, and the world's second largest software company. Oracle offers its database, tools, and applications products, along with related consulting, education, and support services, in over 145 countries around the world.

# High-Level Design

**T**his chapter presents a high-level design for Oracle Work in Process that satisfies the business needs we specify during Strategy and Analysis. It contains database diagrams for Oracle Work in Process application building blocks, lists of database tables and views, and a list of modules.

---

## Overview of High-Level Design

During High-Level Design, we define the application components (tables, views, and modules) we need to build our application. We specify what application components should do without specifying the details of *how* they should do it.

You can refer to this High-Level Design chapter to quickly acquaint yourself with the tables, views, and modules that comprise Work in Process applications. And, you can prepare yourself to understand the detailed design and implementation of Oracle Work in Process.

---

## Summary Database Diagram

The Summary Database Diagram section graphically represents the most important application tables and the relationships between them. It omits tables and relationships that contribute little to the understanding of the application data model. Typically, a summary database diagram shows tables that contain key reference and transaction data.

We prepare a summary database diagram to describe, at a conceptual level, the key information on which our business depends. Later, we refine this summary database diagram, breaking it into multiple database diagrams (generally, one per application building block) to represent all the tables and relationships we need to implement our application in the database.

Review the Summary Database Diagram section to see at a glance the major tables and relationships on which your Work in Process application depends.

---

## Database Diagrams

The Database Diagrams section graphically represents all Work in Process applications tables and the relationships between them, organized by building block.

Use this section to quickly learn what tables each Work in Process application building block uses, and how those tables interrelate. Then, you can refer to the Table and View Definitions sections of Chapter 3 for more detailed information about each of those tables.

---

## Table Lists

The Table List sections list the Work in Process applications tables. Because a product might not include at least one table for each type, this Technical Reference Manual might not include each of the following sections.

### Public Tables

---

Use the Public Table List section to quickly identify the tables you are most interested in. Then, you can refer to the Table and View Definitions sections of Chapter 3 for more detailed information about those tables.

In addition, this manual may contain full documentation for one or more of the following Application Object Library tables: FND\_DUAL, FND\_CURRENCIES, and FND\_COMMON\_LOOKUPS.

### Internal Tables

---

This section includes a list of private, internal tables used by Work in Process; we do not provide additional documentation for these tables.

---

## View Lists

The View List sections list the Work in Process views, with one section for each type of view. Because a product might not include at least one view for each type, this Technical Reference Manual might not include each of the following sections.

Use this section to quickly identify the views you are most interested in. Then, you can refer to the Table and View Definitions sections of Chapter 3 for more detailed information about those views.

### Public Views

---

This section lists views that may be useful for your custom reporting or other data requirements. The list includes a description of the view, and the page in Chapter 3 that gives detailed information about the public view.

## **Web Views**

---

This section lists views that you may need to configure your Self-Service Web applications. The list includes a description of the view, and the page in Chapter 3 that gives detailed information about the web view.

## **Internal Views**

---

This section includes each private, internal view that Work in Process uses.

## **Multiple Reporting Currency Views**

---

This list includes views that were created to support the Multiple Reporting Currencies feature.

---

## **Module List**

The Module List section briefly describes each of the Work in Process applications modules. This section lists forms, reports, and concurrent programs.

A form is a module comprised of closely related windows that are used together to perform a task. For example, the Enter Journals form in Oracle General Ledger includes the Enter Journals window, the Batch window, and the More Actions window. The Enter Journals window is the main window, and from it, you can use buttons to navigate to other windows in the form. The form name usually corresponds to the main window in the form, and is frequently a window you can open directly from the Navigator.

The Reports and Concurrent Programs lists include processes you can submit from the Submit Requests window or other windows, as well as processes that are submitted automatically by Work in Process. Use your user's guide to learn more about reports and concurrent processes.

---

## Summary Database Diagram

This Summary Database Diagram graphically represents the most important Work in Process applications tables and the relationships between them. It describes, at a conceptual level, the key information on which your Work in Process application depends.

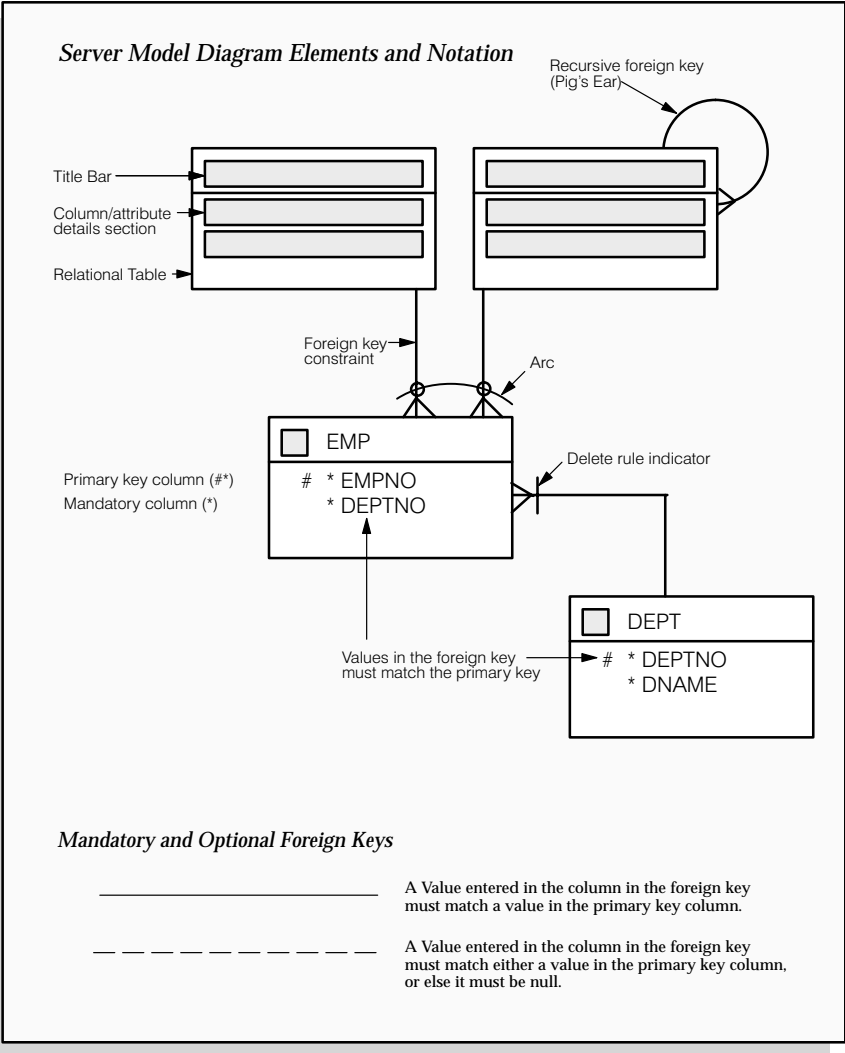

This diagram does not represent the complete database implementation of Work in Process applications tables. It shows tables that contain key reference and transaction data, and omits tables and relationships that contribute little to the understanding of the Work in Process applications data model. For example, a foreign key relationship shown between two tables may actually be implemented by an intervening table, not shown in this diagram.

For more detailed graphical representations of Work in Process applications tables and the relationships between them, see the Database Diagrams section in this chapter.

# Database Diagramming Conventions

We use the following notational conventions in our database diagrams:

Figure 2 – 1  
Database Diagram  
Conventions

**Tables** – are the basic unit of storage in the database. A hand symbol preceding the title in the table's title bar indicates that the table is not owned by this application but shared with another.

**Foreign key constraint** – is a type of referential integrity constraint for checking the integrity of data entered in a specific column or set of columns. This specified column or set of columns is known as the foreign key.

**Delete rule indicator** – determines the action to be taken when an attempt is made to delete a related row in a join table. A line through the foreign key constraint, as shown on the above diagram, indicates that this action is restricted.

**Arcs** – specify that, for any given row in a table, a value must be entered in one of the arc columns. The remaining columns within the arc must be null.

## Database Diagrams

This section graphically represents the significant Oracle Work in Process tables and the relationships between them, organized by building block. Use this section to quickly learn which tables each Work in Process application building block uses, and how these tables interrelate. Then, refer to the Table and View Definitions sections of Chapter 3 for more detailed information about each of the tables.

This section contains a database diagram for the following Work in Process application building blocks:

- Diagram 1: WIP Discrete Jobs
- Diagram 2: WIP Repetitive Schedules
- Diagram 3: WIP Operations
- Diagram 4: WIP Move Transactions
- Diagram 5: WIP Material Transactions
- Diagram 6: WIP Resource Transactions
- Diagram 7: WIP Completion Transactions
- Diagram 8: WIP Work Order-less Completion Transactions

Some tables, especially important reference tables, appear in more than one database diagram. When several building blocks use a table, the table is shown in each appropriate database diagram.

### WIP Discrete Functionality

---

Diagram 1 shows the main tables and relationships that support WIP discrete functionality. Note that although the relationship between WIP\_ENTITIES and WIP\_REPETITIVE\_ITEMS is shown here as mandatory both ways, it actually is part of an arc that includes WIP\_REPETITIVE\_ITEMS, as shown in the WIP Overview diagram.

### WIP Repetitive Functionality

---

Diagram 2 shows the main tables and relationships that support WIP repetitive functionality. Note that although the relationship between WIP\_ENTITIES and WIP\_REPETITIVE\_ITEMS is shown here as mandatory both ways, it actually is part of an arc that includes WIP\_DISCRETE\_JOBS, as shown in the WIP Overview diagram. Note

also that repetitive transactions use allocation tables to enable Flow charging.

### **WIP Operations**

---

Diagram 3 shows the tables that are populated when discrete jobs or repetitive schedules are created and the relationships between them. These tables are also the basis of all transactions. WIP\_OPERATIONS supports move transactions, WIP\_REQUIREMENT\_OPERATIONS supports material transactions, and WIP\_OPERATION\_RESOURCES supports resource transactions.

### **WIP Move Transactions**

---

Diagram 4 shows the tables and relationships that support WIP Move Transactions, both form-based and open. These tables support both discrete job and repetitive schedule Move Transactions. Note that a Move Transaction can generate material transactions for backflush, scrap, or easy completion. A Move Transaction can also generate automatic (WIP Move) resource charges and move-based overhead charges. Finally, a Move Transaction can generate purchase order requisitions for outside processing resources.

### **WIP Material Transactions**

---

Diagram 5 shows the tables and relationships that support WIP Material Transactions. This includes material issues to the shop floor and returns to inventory from the shop floor for discrete jobs, repetitive schedules, and Work Order-less Completion Transactions.

### **WIP Resource Transactions**

---

Diagram 6 shows the tables and relationships that support WIP Resource Transactions for both discrete jobs and repetitive schedules.

### **WIP Completion Transactions**

---

Diagram 7 shows the tables and relationships that support WIP Completion Transactions. This includes the completion of assemblies into inventory and the return of assemblies to the shop floor.

### **WIP Work Order-less Completion Transactions**

---

Diagram 8 shows the tables and relationships that support Work Order-less Completion Transactions. This includes the completion of

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

assemblies into inventory and the return of assemblies to the shop floor.

## How to Use These Database Diagrams

Here is an example of how you might use these database diagrams:

Suppose you want to write a custom application to load information into your Work in Process application from a legacy, non-Oracle system. You first must determine what information is required by your Work in Process application. You turn to Diagram 1 to see what types of information Work in Process can accept. You learn that you can create a record for each discrete job, repetitive schedule, and work order-less completion record in your legacy system. Since your legacy system handles only discrete jobs, you turn to Diagram 1 to see what types of discrete job information are associated with Work in Process jobs. From this diagram, you then determine that there is an interface, the Job and Schedule Interface or `WIP_JOB_SCHEDULE_INTERFACE`, that you can use to load discrete job information into the `WIP_DISCRETE_JOBS` table.

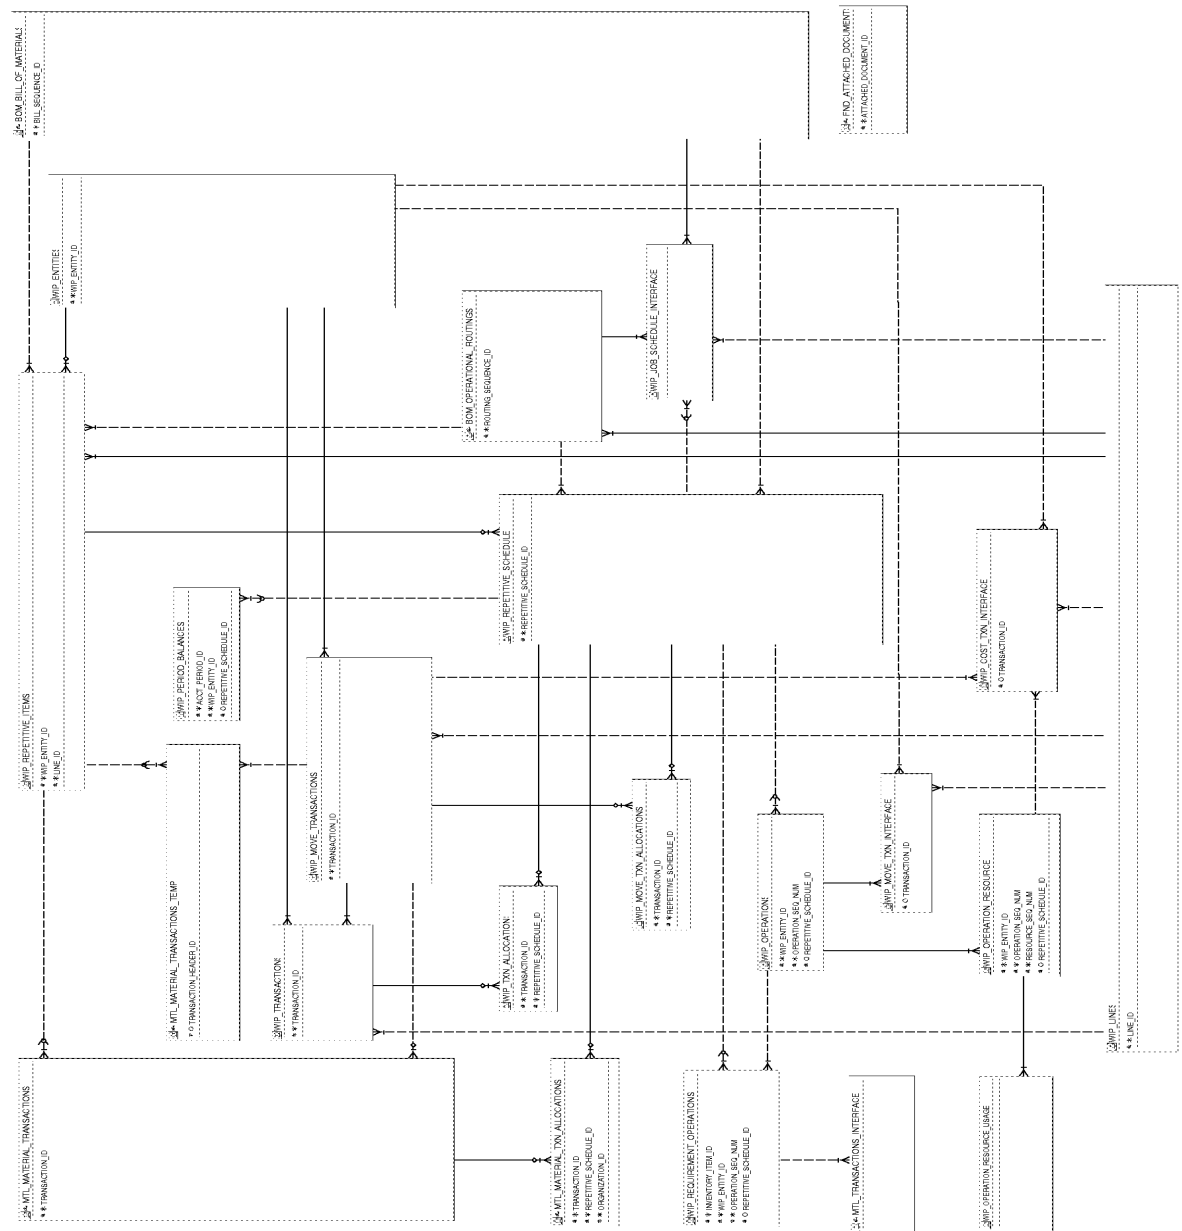

Next, you turn to the Table and View Definitions section in Chapter 3 to learn about the columns in each of these tables. This information helps you determine what information from your legacy system is required to create jobs in Work in Process. Using this information, you write an application that inserts data from your legacy system into the proper columns in the Job and Schedule Interface table so that it can be loaded into Work in Process.

## Public Table List

This section lists each public database table that Oracle Work In Process uses and provides a brief description of each of the tables. Page references refer to the detailed table descriptions in Chapter 3.

Note that "public" tables are not necessarily intended for write access by custom code; Oracle Corporation supports write access using only standard Oracle Applications forms, reports, and programs, or any SQL write access to tables explicitly documented as API tables. For more information, see the How Not To Use This Manual section of this book's Introduction.

Oracle Work In Process uses the following Public tables:

Table Name	Description
BOM_ALTERNATE_DESIGNATORS	Alternate designators (See page 3 – 7)
BOM_BILL_OF_MATERIALS	Bills of material (See page 3 – 8)
BOM_CALENDAR_DATES	Workday calendar dates (See page 3 – 11)
BOM_DEPARTMENTS	Departments (See page 3 – 13)
BOM_DEPARTMENT_RESOURCES	Resources associated with departments (See page 3 – 15)
BOM_INVENTORY_COMPONENTS	Bill of material components (See page 3 – 17)
BOM_OPERATIONAL_ROUTINGS	Routings (See page 3 – 22)
BOM_OPERATION_RESOURCES	Resources on operations (See page 3 – 25)
BOM_OPERATION_SEQUENCES	Routing operations (See page 3 – 27)
BOM_PARAMETERS	Bills of material parameters (See page 3 – 30)
BOM_RESOURCES	Resources, overheads, material cost codes, and material overheads (See page 3 – 32)
BOM_RESOURCE_CHANGES	Resource capacity modifications (See page 3 – 35)
BOM_RESOURCE_SHIFTS	Resource shift information (See page 3 – 37)
BOM_SHIFT_DATES	Workday calendar shift dates (See page 3 – 38)
BOM_SHIFT_TIMES	Workday calendar shift times (See page 3 – 39)
BOM_STANDARD_OPERATIONS	Standard operations (See page 3 – 40)
BOM_STD_OP_RESOURCES	Standard operation resources (See page 3 – 43)

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

CRP_SIMULATION_SETS	Simulation set names (See page 3 – 46)
CST_ACTIVITIES	Activity definition associated with activity costing (See page 3 – 47)
CST_COMP_SNAPSHOT	Stores the assembly units completed at each operation step (See page 3 – 49)
CST_COMP_SNAP_INTERFACE	Stores the assembly units completed at each operation step to be interfaced through the transactions interface (See page 3 – 50)
CST_COMP_SNAP_TEMP	Stores the assembly units completed at each operation step to be interfaced through the transactions temporary table (See page 3 – 51)
CST_COST_ELEMENTS	Cost elements definition (See page 3 – 52)
CST_COST_GROUPS	Stores cost group definitions (See page 3 – 53)
CST_COST_TYPES	Stores cost type definitions (See page 3 – 55)
CST_COST_UPDATES	Cost update history (See page 3 – 57)
CST_DEPARTMENT_OVERHEADS	Department overhead cost definition (See page 3 – 59)
CST_ITEM_COSTS	Item cost summary (See page 3 – 61)
CST_PAC_PERIODS	Holds information about periodic costing open and closed periods for each legal entity. (See page 3 – 63)
CST_RESOURCE_COSTS	Resource and outside processing resource cost definition (See page 3 – 64)
CST_RESOURCE_OVERHEADS	Resource that an overhead is applied to (See page 3 – 66)
ENG_REVISSED_ITEMS	Pending and implemented revised items (See page 3 – 68)
FINANCIALS_SYSTEM_PARAMS_ALL	Oracle Financials system parameters and defaults (See page 3 – 71)
FND_ATTACHED_DOCUMENTS	Attached documents (no table description)
FND_CURRENCIES	Currencies enabled for use at your site (no table description)
FND_DATA_GROUP_UNITS	ORACLE accounts for applications assigned to various data groups (no table description)
FND_DESCR_FLEX_CONTEXTS	Structure names for descriptive flexfields (no table description)

**Oracle Proprietary, Confidential Information—Use Restricted by Contract**

FND_DUAL	Dummy base table used by a form block that does not have a real base table (for commit purposes) (no table description)
FND_PRODUCT_DEPENDENCIES	Dependencies of Oracle Applications products installed at your site (no table description)
FND_PRODUCT_INSTALLATIONS	Oracle Applications products installed at your site (no table description)
FND_RESPONSIBILITY	Responsibilities (no table description)
FND_TERRITORIES	Territories, also known as countries (no table description)
FND_USER	Application users (no table description)
GL_CODE_COMBINATIONS	Account combinations (See page 3 – 79)
GL_SETS_OF_BOOKS	Set of books definitions (See page 3 – 84)
MRP_DESIGNATORS	Plan names (See page 3 – 88)
MRP_PLANS	Settings for a specific plan name (See page 3 – 90)
MRP_RECOMMENDATIONS	MRP plan recommendations (See page 3 – 96)
MRP_RELIEF_INTERFACE	Interface table to relieve the master schedule tables (See page 3 – 103)
MRP_SCHEDULE_DESIGNATORS	Schedule names (See page 3 – 106)
MRP_SYSTEM_ITEMS	MRP item master (See page 3 – 108)
MTL_CATEGORIES_B	Code combinations table for item categories (See page 3 – 113)
MTL_DEMAND	Sales order demand and reservations (See page 3 – 115)
MTL_INTERFACE_PROC_CONTROLS	Interface Processes Control Parameters (See page 3 – 121)
MTL_ITEM_LOCATIONS	Definitions for stock locators (See page 3 – 123)
MTL_ITEM_REVISIONS	Item revisions (See page 3 – 126)
MTL_ITEM_STATUS	Material status definitions (See page 3 – 128)
MTL_ITEM_SUB_INVENTORIES	Item–subinventory assignments (See page 3 – 129)
MTL_KANBAN_CARDS	Kanban Cards (See page 3 – 131)
MTL_LOT_NUMBERS	Lot number definitions (See page 3 – 134)

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

MTL_MATERIAL_TRANSACTIONS	Material transaction table (See page 3 – 136)
MTL_MATERIAL_TRANSACTIONS_TEMP	Temporary table for processing material transactions (See page 3 – 143)
MTL_MATERIAL_TXN_ALLOCATIONS	Unit allocations among repetitive schedules (See page 3 – 149)
MTL_ONHAND_QUANTITIES	FIFO quantities by control level and receipt (See page 3 – 150)
MTL_PARAMETERS	Inventory control options and defaults (See page 3 – 152)
MTL_PLANNERS	Planner code definitions (See page 3 – 159)
MTL_RTG_ITEM_REVISIONS	Routing revisions (See page 3 – 160)
MTL_SALES_ORDERS	Local definitions of sales orders (See page 3 – 162)
MTL_SECONDARY_INVENTORIES	Subinventory definitions (See page 3 – 164)
MTL_SECONDARY_LOCATORS	Item–subinventory–locator assignments (See page 3 – 168)
MTL_SERIAL_NUMBERS	Serial number definitions (See page 3 – 169)
MTL_SERIAL_NUMBERS_TEMP	Temporary serial number holding table (See page 3 – 172)
MTL_SYSTEM_ITEMS_B	Inventory item definitions (See page 3 – 173)
MTL_TRANSACTIONS_INTERFACE	Gateway for externally generated material transactions (See page 3 – 193)
MTL_TRANSACTION_ACCOUNTS	Material transaction distributions (See page 3 – 202)
MTL_TRANSACTION_LOTS_TEMP	Temporary lot numbers holding table (See page 3 – 205)
MTL_TRANSACTION_LOT_NUMBERS	Transaction lot numbers (See page 3 – 207)
MTL_TRANSACTION_REASONS	Inventory Transaction Reasons Table (See page 3 – 208)
MTL_TRANSACTION_TYPES	Inventory Transaction Types Table (See page 3 – 209)
MTL_UNITS_OF_MEASURE_TL	Unit of measure definitions (See page 3 – 211)
MTL_UNIT_TRANSACTIONS	Serial number transactions (See page 3 – 213)
MTL_UOM_CLASSES_TL	Unit of measure classes (See page 3 – 215)
MTL_UOM_CLASS_CONVERSIONS	Conversions between base units of two different classes (See page 3 – 216)

MTL_UOM_CONVERSIONS	Unit of measure conversion table for both default and item specific conversions (See page 3 – 218)
ORG_ACCT_PERIODS	Organization accounting period definition table (See page 3 – 220)
ORG_GL_BATCHES	General Ledger transfer information for each batch (See page 3 – 222)
PJM_UNIT_NUMBERS	End Item Model/Unit Numbers (See page 3 – 223)
PO_DISTRIBUTIONS_ALL	Purchase order distributions (See page 3 – 225)
PO_HEADERS_ALL	Document headers (for purchase orders, purchase agreements, quotations, RFQs) (See page 3 – 232)
PO_LINES_ALL	Purchase document lines (for purchase orders, purchase agreements, quotations, RFQs) (See page 3 – 240)
PO_LINE_LOCATIONS_ALL	Document shipment schedules (for purchase orders, purchase agreements, quotations, RFQs) (See page 3 – 246)
PO_REQUISITIONS_INTERFACE_ALL	Requisition Import interface table (See page 3 – 254)
PO_REQUISITION_LINES_ALL	Requisition lines (See page 3 – 262)
PO_VENDORS	Suppliers (See page 3 – 269)
RCV_TRANSACTIONS	Receiving transactions (See page 3 – 276)
WIP_ACCOUNTING_CLASSES	Accounting classes (See page 3 – 282)
WIP_BIS_PERF_TO_PLAN	Scheduled production and actual production (See page 3 – 285)
WIP_BIS_PROD_ASSY_YIELD	Production assembly yield (See page 3 – 286)
WIP_BIS_PROD_DEPT_YIELD	Yield by department (See page 3 – 288)
WIP_BIS_PROD_INDICATORS	Productivity, utilization, and yield, by job, assembly, department, and resource (See page 3 – 290)
WIP_COST_TXN_INTERFACE	Requests to process cost transactions (See page 3 – 293)
WIP_DEF_CAT_ACC_CLASSES	Default accounting classes (See page 3 – 298)
WIP_DISCRETE_JOBS	Discrete jobs (See page 3 – 299)
WIP_DJ_CLOSE_TEMP	Temporary information on jobs being closed (See page 3 – 305)

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

WIP_EMPLOYEE_LABOR_RATES	Employee hourly labor rates (See page 3 – 306)
WIP_ENTITIES	Information common to jobs and schedules (See page 3 – 308)
WIP_FLOW_SCHEDULES	Work order-less flow schedules (See page 3 – 310)
WIP_INDICATORS_TEMP	Temporary table used for calculating the production indicators from the transaction information (See page 3 – 314)
WIP_INTERFACE_ERRORS	Errors encountered while processing open interface requests (See page 3 – 316)
WIP_JOB_DTLS_INTERFACE	Requests to add/delete/ modify material/resource requirements for jobs and schedules (See page 3 – 317)
WIP_JOB_SCHEDULE_INTERFACE	Requests to create or modify jobs and schedules (See page 3 – 320)
WIP_LINES	Production lines (See page 3 – 324)
WIP_MOVE_TRANSACTIONS	Shop floor move transactions (See page 3 – 326)
WIP_MOVE_TXN_ALLOCATIONS	Move transaction allocations for repetitive schedules (See page 3 – 329)
WIP_MOVE_TXN_INTERFACE	Requests to process shop floor move transactions (See page 3 – 330)
WIP_OPERATIONS	Operations necessary for jobs and schedules (See page 3 – 334)
WIP_OPERATION_OVERHEADS	Overheads for operations in an average costing organization (See page 3 – 337)
WIP_OPERATION_RESOURCES	Resources necessary for operations (See page 3 – 339)
WIP_OPERATION_RESOURCE_USAGE	Resource usage in an operation resource according to the shift and calendar information (See page 3 – 342)
WIP_PAC_ACTUAL_COST_DETAILS	Stores the cost of each resource, overhead, outside processing and job close transaction by entity, period, cost group (See page 3 – 343)
WIP_PAC_PERIOD_BALANCES	Stores periodic balance of all WIP entities within a cost group by period (See page 3 – 345)

WIP_PARAMETERS	WIP specific organization level parameters (See page 3 – 348)
WIP_PERIOD_BALANCES	Job and schedule charges, by accounting period (See page 3 – 352)
WIP_PURGE_TEMP	Temporary information on jobs and schedules being purged (See page 3 – 355)
WIP_REPETITIVE_ITEMS	Line/assembly associations (See page 3 – 356)
WIP_REPETITIVE_SCHEDULES	Repetitive schedules (See page 3 – 359)
WIP_REQUIREMENT_OPERATIONS	Components required by jobs and schedules (See page 3 – 362)
WIP_REQ_OPERATION_COST_DETAILS	Costs for material requirements in an average costing organization (See page 3 – 365)
WIP_SCHEDULE_GROUPS	Discrete job schedule groups (See page 3 – 366)
WIP_SCHEDULING_INTERFACE	Requests to schedule operations and resources (See page 3 – 367)
WIP_SCRAP_VALUES	Cost information for assembly scrap transactions (See page 3 – 368)
WIP_SHOP_FLOOR_STATUSES	Statuses assigned to particular jobs and schedules (See page 3 – 370)
WIP_SHOP_FLOOR_STATUS_CODES	Statuses that a job or schedule may assume (See page 3 – 372)
WIP_SO_ALLOCATIONS	Allocations of job assemblies to sales orders (See page 3 – 374)
WIP_SO_ALLOCATIONS_TEMP	Temporary sales order allocation information (See page 3 – 375)
WIP_TEMP_REPORTS	Temporary information used while generating reports (See page 3 – 376)
WIP_TRANSACTIONS	WIP resource transactions (See page 3 – 380)
WIP_TRANSACTION_ACCOUNTS	Debits and credits due to resource transactions (See page 3 – 383)
WIP_TXN_ALLOCATIONS	Resource transaction allocations for repetitive schedules (See page 3 – 388)

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

WIP\_TXN\_INTERFACE\_ERRORS

Errors encountered during resource and move transaction processing (See page 3 – 384)

WIP\_VALID\_INTRAOPERATION\_STEPS

Types of intraoperation steps possible in an organization (See page 3 – 385)

## Public View List

This section lists each public database view that Work in Process uses and provides a brief description of each of the views. These views may be useful for your custom reporting or other data requirements.

Work in Process uses the following public views:

<b>View Name</b>	<b>Description</b>
MFG_LOOKUPS	(No view description)
WIP_BIS_LATE_PROD_COMP_V	Discrete jobs or repetitive schedules that completed late
WIP_BIS_PERF_TO_PLAN_V	Number of items produced/scheduled
WIP_BIS_PERIOD_BALANCE_V	Value of WIP for discrete jobs and repetitive schdules
WIP_BIS_PRODUCTIVITIES_V	Efficiency for hour-based resources
WIP_BIS_PROD_ASSY_YIELD_V	Total/Scrapped quantity at specific organization/date
WIP_BIS_PROD_DEPT_YIELD_V	Completed/Scrapped quantity for department/ operation/date
WIP_BIS_PROD_VAL_EMP_V	Average production per employee in an inventory organization
WIP_BIS_SCRAP_REASONS_V	Information about scrapped assemblies on a given date
WIP_BIS_UTZ_CATNOITEM_V	Resource Utilization including Product Category without Inventory Item

## Forms and Table View List

This section lists supplementary views that are not essential to the Release 11i data model, but simplify coding or improve performance of Developer/2000. For example, many of these views are used as base tables in Work in Process forms.

**Warning:** We do not recommend that you query or alter data using these views. Furthermore, these views may change dramatically in subsequent minor or major releases of Work in Process.

Work in Process uses the following Forms and Table views:

## Single Organization View List

Multi–Organization Support is a feature that allows you to implement multiple sets of books within a single installation of Oracle Payables, Oracle Receivables, Oracle Purchasing, Oracle Order Management, and Oracle Shipping. Instead of using multiple installations to provide data security, data is secured by operating unit.

In Release 10.7, we added a column, `ORG_ID`, to each base table that requires “partitioning” by operating unit, including all transaction tables and many reference tables, and renamed these tables to end with the suffix `_ALL`. Then, to take the place of the renamed table, we created a view (named like the Release 10.6 or earlier table) containing a `WHERE` clause that automatically restricts data to a single operating unit. The `WHERE` clause relies upon the value of an Oracle global variable to indicate the current organization.

If you want to retrieve all information, regardless of operating unit, query the `_ALL` table. For example, if you are running a cross–organization report, you probably want to query the `_ALL` table. However, if you want to report against only a single organization or operating unit, query the corresponding cross–organizational view, using the familiar 10.6–style table name. The view definition will automatically retrieve only data for your current operating unit.

**Additional Information:** *Multiple Organizations in Oracle Applications*

Work in Process uses the following Single Organization views:

- `PO_REQUISITIONS_INTERFACE`

### Forms

INVTMSG	Start Managers
INVTTELT	Lot Number Entry
INVTTESR	Serial Number Entry
WIPDJMDF	Define, Simulate, Close, Purge, or View Discrete Jobs
WIPJSINT	Pending Jobs and Schedules
WIPMRMDF	Material Requirements
WIPMRQAW	View Material Requirements
WIPOPMDF	Operations
WIPOPQAW	View Operations
WIPPURGE	Purge Discrete Jobs or Repetitive Schedules
WIPREMAL	Associate Lines and Assemblies
WIPREMDF	Repetitive Schedules
WIPREMLN	Production Lines
WIPRRQAW	View Resource Requirements
WIPSGMDF	Schedule Groups
WIPSTMSC	Assign Shop Floor Statuses
WIPSUMCL	WIP Accounting Classes
WIPSUMLR	Employee Labor Rates
WIPSUMPM	Work in Process Parameters
WIPSUMST	Shop Floor Statuses
WIPTICOM	Components Common to WIPTIRSC and WIPTISFM
WIPTIRSC	Find Pending Resource Transactions
WIPTISFM	Pending Move Transactions
WIPTQJLC	Job Lot Compositions
WIPTQRSC	View Resource Transactions
WIPTQSFM	View Move Transactions

## Concurrent Programs

BMCLT	Roll up cumulative leadtimes
CMCTM	Resource Cost Transaction Manager
CMCTW	Resource Cost Transaction Worker
INCTCM	Process transaction interface
INCTSN	Initialize serial numbers for inventory items
WICDCL	Close discrete jobs
WICDOL	Create final assembly work orders
WICMEX	Load discrete jobs concurrently
WICMLX	Process WIP Open Job and Schedule Interface requests

# Detailed Design

**T**his chapter presents a detailed design for implementing Oracle Work in Process. It contains detailed definitions of tables and views that you may need to reference to write custom reports or use for other data extraction.

---

## Overview of Detailed Design

During Detailed Design, we specify in detail how each applications component should work. We prepare detailed definitions of tables and views.

You can refer to this Detailed Design chapter to gain a detailed understanding of the underlying structure and processing of Oracle Work in Process that enables you to:

- Convert existing application data
- Integrate your Work in Process application with your other applications systems
- Write custom reports
- Define alerts against Oracle Applications tables
- Create views for decision support queries using query tools
- Configure your Oracle Self-Service Web Applications

---

## Table and View Definitions

The Table and View Definitions section contains a detailed definition of Work in Process applications tables. For each table, it provides information about primary keys, foreign keys, QuickCodes, indexes, triggers, and sequences. It also gives you a detailed description of each column and its characteristics. In addition, it provides the SQL statement that defines each view. Review this section to get a detailed understanding of what tables your Work in Process application contains, and how it uses them to hold and access the information it needs.

---

## Table and View Definitions

This section contains a detailed description of each Oracle Work in Process table and view that you may need to reference. For each table, it presents detailed information about:

- Primary keys
- Foreign keys
- Column descriptions
- Indexes
- Oracle sequences
- Triggers
- View derivations

Because Oracle does not support customization of Oracle Application Object Library tables, we do not provide you with detailed information about them. Consequently, this section does not document all the FND\_% tables Oracle Work in Process uses.

The following sections appear in each table or view description:

---

### Foreign Keys

To help you understand the relationships between tables, we list each foreign key contained in a table. For each foreign key in a table, we list the primary key table name (the table to which a foreign key refers), its corresponding primary key columns, and the foreign key columns that refer to those primary key columns.

When the primary key table has a composite primary key, we list each column of the composite key sequentially.

If a table contains two or more distinct foreign keys that refer to the same primary key table, we repeat the primary key table name and list each of the distinct foreign keys separately.

---

### QuickCodes Columns

When a database column contains a QuickCodes value, which we implement using a foreign key to FND\_LOOKUPS, MFG\_LOOKUPS, or to some other lookup table, we list the QuickCodes type (lookup

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

type) to which the QuickCodes value must belong and a complete list of QuickCodes values and meanings. Some QuickCodes can be defined by you in the application. These values are designated as User-defined.

---

## Column Descriptions

We list the important characteristics of each column in a table or view. These characteristics include whether the column is part of the table's primary key, whether Oracle8i requires a value for this column, and the data type of the column. We also give you a brief description of how Oracle Work in Process uses the column.

When a column is part of a table's primary key, we append the notation (PK) to the name of that column.

To help you understand which columns Oracle Work in Process uses and which columns it does not use, we alert you to any unused column. When no module uses a database column, we show one of the following legends in the Description column:

<b>Not currently used</b>	Oracle Work in Process does not use this column, although the column might be used in a future release.
<b>No longer used</b>	Oracle Work in Process no longer uses this column. AutoInstall installs this column. Subsequent versions of Oracle Work in Process might not include this column.
<b>No longer installed</b>	Oracle Work in Process no longer uses this column. If you <i>upgraded</i> your software from an earlier version, you may still have this column, depending upon whether you chose to delete it during an upgrade process. If you <i>install</i> Oracle Work in Process, you do not have this column.

### Standard Who Columns

---

Most Oracle Work in Process tables contain standard columns to support \ **Row Who**. When your program or SQL\*Plus command selects a row from a table, use these columns to determine who last updated the row. If your program or SQL\*Plus command updates or

inserts a row in an interface table, you must populate each of the five standard Who columns:

<b>LAST_UPDATE_DATE</b>	Date when a user last updated this row
<b>LAST_UPDATED_BY</b>	User who last updated this row (foreign key to FND_USER.USER_ID)
<b>CREATION_DATE</b>	Date when this row was created
<b>CREATED_BY</b>	User who created this row (foreign key to FND_USER.USER_ID)
<b>LAST_UPDATE_LOGIN</b>	Operating system login of user who last updated this row (foreign key to FND_LOGINS.LOGIN_ID). You should set this to NULL, or to 0 if NULL is not allowed

Since every table containing Who columns has several foreign keys to the tables FND\_USER and FND\_LOGINS, we do not include the foreign key columns LAST\_UPDATED\_BY, CREATED\_BY, or LAST\_UPDATE\_LOGIN in a table's list of foreign keys.

### **Additional Who Columns for Concurrent Programs**

---

Some Oracle Work in Process tables also contain several additional Who columns to distinguish between changes a user makes with a form and changes a concurrent program makes. When a concurrent program updates or inserts a row in a table, the concurrent program populates the following additional Who columns:

<b>REQUEST_ID</b>	Concurrent request ID of program that last updated this row (foreign key to FND_CONCURRENT_REQUESTS.REQUEST_ID)
<b>PROGRAM_APPLICATION_ID</b>	Application ID of program that last updated this row (foreign key to FND_APPLICATION.APPLICATION_ID)
<b>PROGRAM_ID</b>	Program ID of program that last updated this row (foreign key to FND_CONCURRENT_PROGRAM.CONCURRENT_PROGRAM_ID)
<b>PROGRAM_UPDATE_DATE</b>	Date when a program last updated this row

Since every table containing these additional Who columns has several foreign keys to the tables FND\_CONCURRENT\_REQUESTS, FND\_APPLICATION, and FND\_CONCURRENT\_PROGRAM, we do not include the foreign key columns REQUEST\_ID, PROGRAM\_APPLICATION\_ID, or PROGRAM\_ID in a table's list of foreign keys.

---

## Indexes

If an Oracle Work in Process table uses an Oracle8i index, we list the database columns that comprise that index, in sequential order.

**Note:** The indexes we document in this manual correspond to unique keys we specified during product development and testing. In some cases, we may add additional indexes during the porting process to fine-tune performance on specific platforms; therefore, there may be minor differences between the indexes documented in this book and the indexes for production versions of Work in Process.

---

## Sequences

Oracle Work in Process uses Oracle8i sequence generators to generate unique integers. If any table column gets its value from an Oracle8i sequence generator, we list the name of the corresponding sequence generator and the name of the column that stores the unique integer.

---

## Database Triggers

If a table has one or more active database triggers, we provide a brief explanation of each database trigger and when it fires.

---

## View Derivation

For each Oracle Work in Process view you may need to reference, we include important elements from the SQL statement that defines or creates a view. By studying this view definition, you can understand exactly how a view derives its contents.

## BOM\_ALTERNATE\_DESIGNATORS

BOM\_ALTERNATE\_DESIGNATORS stores the alternate designators that you use to define alternate bills of material and routings.

You cannot use the alternate designator to define an alternate bill or routing after its DISABLE\_DATE.

## BOM\_BILL\_OF\_MATERIALS

BOM\_BILL\_OF\_MATERIALS stores information about manufacturing and engineering bills of material. Each row in this table represents a unique manufacturing or engineering bill and is identified by BILL\_SEQUENCE\_ID.

Oracle Bills of Material stores planning bills, model/option structures and standard bills in this table. The item's BOM\_ITEM\_TYPE attribute dictates the type of bill of material defined in this table. There is no identifier in this table that differentiates planning, model, option class, standard bills or product families.

If a bill shares its structure with another bill in the same or a different organization, COMMON\_BILL\_SEQUENCE\_ID refers to that common bill. This is a mandatory column that equals BILL\_SEQUENCE\_ID if there is no common bill reference.

If an engineering change order creates a new bill of material for an item, PENDING\_FROM\_ECN stores the ECO number that originates this new bill.

### *Database Triggers*

Trigger Name : BOMTBOMX  
Trigger Time : AFTER  
Trigger Level : ROW  
Trigger Event : INSERT, UPDATE, DELETE

This trigger updates the REXPLODE\_FLAG in the BOM\_EXPLOSIONS table for the INSERT, UPDATE or DELETE of a row. For a product family this trigger nulls out the PRODUCT\_FAMILY\_ITEM\_ID column in the MTL\_SYSTEM\_ITEMS table for DELETES.

## BOM\_CALENDAR\_DATES

BOM\_CALENDAR\_DATES stores data compiled by the workday calendar for the base calendar. This table stores every date between the calendar start date and calendar end date for the given calendar using a specified exception set.

The workday calendar program sequences each work day for the calendar, starting with 1. Non-working days have NULL values for SEQ\_NUM. PRIOR\_SEQ\_NUM and NEXT\_SEQ\_NUM point to the previous and next workdays. For rows that represent workdays, prior equals next. For non-working days prior points to previous workday and next points to next workday.

## BOM\_DEPARTMENT\_RESOURCES

BOM\_DEPARTMENT\_RESOURCES stores information about resources that you assign to a department. You then use these resources on routing operations. You can define multiple resources for a department.

SHARE\_CAPACITY\_FLAG determines if the current department shares its capacity with other departments. SHARE\_FROM\_DEPT\_ID indicates the department which shares the capacity shares of a resource with your department.

You can use RESOURCE\_GROUP\_NAME to group resource assignments to departments. Oracle Capacity uses this information when performing resource rollups.

# BOM\_INVENTORY\_COMPONENTS

BOM\_INVENTORY\_COMPONENTS stores information about bills of material components. This table only stores single-level components. COMPONENT\_SEQUENCE\_ID uniquely identifies each row. There is one row per component on an operation within a given date range.

This table is the main child table of BOM\_BILL\_OF\_MATERIALS and references the parent using BILL\_SEQUENCE\_ID. It uses EFFECTIVITY\_DATE and DISABLE\_DATE to time phase components into a bill of material. The Bill of Material window enforces that only one row for a component in an operation is effective at a given time.

REVISED\_ITEM\_SEQUENCE\_ID points to the revised item on an ECO that affects a particular component row. If IMPLEMENTATION\_DATE is null, the component is pending on an engineering change that has not yet been implemented. IMPLEMENTATION\_DATE is either NULL (pending on ECO) or equals EFFECTIVITY\_DATE (implemented). OLD\_COMPONENT\_SEQUENCE\_ID points to the original component row affected by this component row through an engineering change.

This table also contains certain columns relating to shipping, billing and accounting for revenue on a customer order through Oracle Order Management. CHECK\_ATP determines if an ATP check is required for this item when placing an order and overrides the Item level ATP flag. LOW\_QUANTITY and HIGH\_QUANTITY define minimum and maximum quantities of this component item that can be placed on an order if the customer chooses to override COMPONENT\_QUANTITY. OPTIONAL decides if a component is a required option class you have to choose from (for Option Class items) or a required item (for Standard items) when taking an order. For Option Class items, MUTUALLY\_EXCLUSIVE\_OPTIONS decides if one or more of its components can be placed on an order when you pick this option class.

OPERATION\_LEAD\_TIME\_PERCENT is denormalized for performance from BOM\_OPERATION\_SEQUENCES when rolling up cumulative lead times.

The ORGANIZATION\_ID for the component can be derived from the BOM\_BILL\_OF\_MATERIALS table using BILL\_SEQUENCE\_ID.

## Database Triggers

Trigger Name : BOMTBICX  
 Trigger Time : AFTER  
 Trigger Level : ROW  
 Trigger Event : INSERT, UPDATE, DELETE

This trigger marks the preexploded data in BOM\_EXPLOSIONS for re-explosion. It sets the REXPLODE\_FLAG = 1 for the records that reference the bill in which the component record is being changed.

## BOM\_OPERATIONAL\_ROUTINGS

BOM\_OPERATIONAL\_ROUTINGS stores information about manufacturing and engineering routings.

If a routing shares its operation steps with another routing in the same organization, COMMON\_ROUTING\_SEQUENCE\_ID is a reference to that common routing. This is a mandatory column that equals ROUTING\_SEQUENCE\_ID if there is no common reference. If the routing references a common routing, Oracle Bills of Materials populates the INVENTORY\_ITEM\_ID of the common into COMMON\_ASSEMBLY\_ITEM\_ID.

## BOM\_OPERATION\_RESOURCES

BOM\_OPERATION\_RESOURCES stores information about resources that you require to complete operations on routings. You may assign multiple resources or assign the same resource multiple times at any operation.

The manufacturing lead time process calculates RESOURCE\_OFFSET\_PERCENT. You may override the value in the Define Routing window. CRP will use this value to calculate resource availability. If you re-run the manufacturing lead time process, it will recalculate and update RESOURCE\_OFFSET\_PERCENT for scheduling.

## BOM\_OPERATION\_SEQUENCES

BOM\_OPERATION\_SEQUENCES stores information about routing operations. You may define multiple operations for a routing. You must specify the department in which every operation will occur.

Oracle Bills of Material stores the STANDARD\_OPERATION\_ID if you use a standard operation to define your operation.

You cannot have overlapping effective dates for the same operation. The Define Routing window will prevent you from doing that. For example, you cannot define operations as follows:

Op Seq	Effective Date	Disable Date
---	-----	-----
10	10-SEP-93	10-DEC-93
10	20-OCT-93

## BOM\_RESOURCES

BOM\_RESOURCES stores information about resources, overheads, material overheads, and material sub-elements. COST\_ELEMENT\_ID determines the type of the resource. Resources are additionally classified as either material resources or outside processing resources

If the resource represents a currency unit, UNIT\_OF\_MEASURE stores the currency code associated with the set of books the organization points to.

## BOM\_RESOURCE\_SHIFTS

BOM\_RESOURCE\_SHIFTS stores information about shifts that you assign to resources. This table is a child of BOM\_DEPARTMENT\_RESOURCES. You can assign multiple shifts to a resource in a department if the resource is not a 24 hour resource.

## BOM\_SHIFT\_DATES

BOM\_SHIFT\_DATES stores information about compiled data for shift calendars. This table stores every date between the calendar start date and calendar end date for a calendar name and exception set. The workday calendar program assigns a sequence number starting at 1, to each date. The program generates the prior sequence number and next sequence number for every calendar date that is stored in this table. This table stores values for sequence number, prior sequence number and next sequence number for a non-working day. The values for these columns are equal to a working day. The workday calendar program generates a shift calendar for each shift you define for your calendar.

## BOM\_STANDARD\_OPERATIONS

BOM\_STANDARD\_OPERATIONS stores information about the standard operations, events, processes, and line operations that you define. Events/processes/line operations are for Flow Manufacturing.

You can use these standard operations/events/processes/line operations when you define routing steps to build your assembly. The Define Routing window defaults all data for the standard operation/events/processes/line operation into the routing step.

BOM\_OPERATION\_SEQUENCES and BOM\_STANDARD\_OPERATIONS share the descriptive flex definition. Therefore, the Define Routing window will also copy the descriptive flex information into the routing step.

Trigger Time : BEFORE  
Trigger Level : ROW  
Trigger Event : UPDATE

When you update a standard operation that is referenced by routing operations, this trigger updates all the corresponding rows that reference routing operations in the BOM\_OPERATION\_SEQUENCES table.

## BOM\_STD\_OP\_RESOURCES

BOM\_STD\_OP\_RESOURCES stores information about resources you assign to standard operations. You may assign multiple resources to your standard operations.

When you use a standard operation to define your routing step, the Define Routing window copies the standard operation resources as operation resources. Since BOM\_STD\_OP\_RESOURCES shares descriptive flex definition with BOM\_OPERATION\_RESOURCES, the window will also copy the descriptive flex information.

Trigger Name : BOM\_STD\_OP\_RESOURCES\_T1  
 Trigger Time : BEFORE  
 Trigger Level : ROW  
 Trigger Event : INSERT

When you create a standard resource for a standard operation, then this trigger creates a corresponding row in the BOM\_OPERATION\_RESOURCES table for every routing operation that references this standard operation.

Trigger Name : BOM\_STD\_OP\_RESOURCES\_T2  
 Trigger Time : BEFORE  
 Trigger Level : ROW  
 Trigger Event : UPDATE

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

When you update a standard resource for a standard operation, then this trigger updates every corresponding row in the BOM\_OPERATION\_RESOURCES table for all the routing operations that reference this standard operation.

Trigger Name : BOM\_STD\_OP\_RESOURCES\_T3  
Trigger Time : BEFORE  
Trigger Level : ROW  
Trigger Event : DELETE

When you delete a standard resource for a standard operation, then this trigger deletes every corresponding row in the BOM\_OPERATION\_RESOURCES table for all the routing operations that reference this standard operation.

## CRP\_SIMULATION\_SETS

CRP\_SIMULATION\_SETS stores the names of the simulation sets. Simulation sets are used to group multiple resource changes. Each resource change defined in BOM\_RESOURCE\_CHANGES can be associated with a simulation set. The USE\_IN\_WIP flag determines if the resource change associated with a particular simulation set is used by the WIP scheduler. The RCCP and CRP reports and inquiries can be run for a particular simulation set.

## CST\_COMP\_SNAPSHOT

CST\_COMP\_SNAPSHOT contains snapshot information from WIP\_OPERATIONS. When the user performs a WIP assembly completion, assembly return, or scrap transaction, operation information such as assembly units completed at each operation step and other details from WIP\_OPERATIONS are inserted into this table.

In an average costing organization, when the user completes assemblies and chooses the "Use Actual Resources" system option, the information in CST\_COMP\_SNAPSHOT is used by the Actual Cost Worker (CMCACW) to calculate the cost of WIP assembly completion, assembly return, and scrap transactions.

## CST\_COST\_GROUPS

Stores cost group definitions. Cost groups are used in average costing and project manufacturing. A cost group can be associated with a specific average costing organization or can be a multiple organization cost group. A cost group that is associated with a project that spans multiple inventory organizations must be a multiple organization cost group. A multiple organization 'common' cost group is seeded in the table. Multiple projects can share a cost group. In addition, cost groups can also be used as organization cost groups for periodic costing. Identified by cost group type, the organization cost group is used for periodic costing to calculate costs for a collection of one or more inventory organizations within a legal entity.

## CST\_COST\_TYPES

CST\_COST\_TYPES stores cost type definitions. The table is seeded with three cost types: Frozen, Average, and Pending. The Frozen cost type is used in standard costing organizations. The average cost type is used in average costing organizations. All costs reference a cost type.

PL\_ELEMENT\_FLAG, PL\_RESOURCE\_FLAG, PL\_OPERATION\_FLAG, PL\_ACTIVITY\_FLAG values are used by the Cost Rollup to determine whether to group rollup costs by cost element, sub element, operation sequence number, or activity.

BOM\_SNAPSHOT\_FLAG is used by the Cost Rollup to determine whether to save the bill structure when rolling up costs for a cost type.

## CST\_ITEM\_COSTS

CST\_ITEM\_COSTS stores item cost control information by cost type.

For standard costing organizations, the item cost control information for the Frozen cost type is created when you enter a new item. For average cost organizations, item cost control information is created when you transact the item for the first time.

You can use the Item Costs window to enter cost control information.

## CST\_RESOURCE\_OVERHEADS

CST\_RESOURCE\_OVERHEADS stores information about resource overheads. When the Cost Manager invokes the proper cost worker, based on whether the organization is using average or standard costing, the information in this table is used to determine the resource overhead that should be applied. To earn overhead based on resources, the overhead must be associated with the resource being transacted and a rate must be defined for the resource for the department in which the resource is transacted.

## ENG\_REVISSED\_ITEMS

ENG\_REVISSED\_ITEMS stores information about the revised items on an engineering change order. It is a child table of ENG\_ENGINEERING\_CHANGES. Since each ECO may have more than one revised item that refers to the same bill, the column REVISED\_ITEM\_SEQUENCE\_ID is used to differentiate between multiple occurrences of the same item on an ECO.

## FINANCIALS\_SYSTEM\_PARAMS\_ALL

FINANCIALS\_SYSTEM\_PARAMETERS\_ALL contains options and defaults you share between your Oracle Payables application, and your Oracle Purchasing and Oracle Assets applications. You can define these options and defaults according to the way you run your business. This table corresponds to the Financials Options window. There is only one row in this table. There is no primary key for this table.

## FND\_CURRENCIES

FND\_CURRENCIES stores information about currencies. Each row includes the currency code (CURRENCY\_CODE) established by ISO (International Standards Organization) standard, the name of the currency (NAME), a flag to indicate whether the currency is enabled for use at your site (ENABLED\_FLAG), a flag to indicate if this is a currency or a statistical unit (CURRENCY\_FLAG), and the territory code of the issuing country (ISSUING\_TERRITORY\_CODE). Each row also includes the number of digits to the right of the decimal point (PRECISION), the extended precision (EXTENDED\_PRECISION), the symbol denoting the currency, a description of the currency, and descriptive flexfield attribute columns. There is also information on when the currency becomes active and inactive, and the minimum accountable unit for the currency. You need one row for each currency defined with Oracle Application Object Library. Oracle Application Object Library uses this information to display dynamic currency values. You can also use this information to assign a currency to a set of books.

# FND\_DUAL

FND\_DUAL stores a dummy constant value. You always need at least one row in this table. Oracle Application Object Library provides this table as a base table for forms that only submit concurrent requests (such as reporting forms) and therefore need to perform a commit cycle without updating an application database table. Such forms generally insert a record into this table (usually the value 1). You should delete rows from this table occasionally, but you should always leave at least one row in this table (for a form that may update a record instead of inserting one).

Column Descriptions

Name	Null?	Type	Description
DUMMY	NULL	NUMBER(2)	Dummy column

## GL\_CODE\_COMBINATIONS

GL\_CODE\_COMBINATIONS stores valid account combinations for each Accounting Flexfield structure within your Oracle General Ledger application. Associated with each account are certain codes and flags, including whether the account is enabled, whether detail posting or detail budgeting is allowed, and others.

Segment values are stored in the SEGMENT columns. Note that each Accounting Flexfield structure may use different SEGMENT columns within the table to store the flexfield value combination. Moreover, the SEGMENT columns that are used are not guaranteed to be in any order.

The Oracle Application Object Library table FND\_ID\_FLEX\_SEGMENTS stores information about which column in this table is used for each segment of each Accounting Flexfield structure. Summary accounts have SUMMARY\_FLAG = 'Y' and TEMPLATE\_ID not NULL. Detail accounts have SUMMARY\_FLAG = 'N' and TEMPLATE\_ID NULL.

## GL\_SETS\_OF\_BOOKS

GL\_SETS\_OF\_BOOKS stores information about the sets of books you define in your Oracle General Ledger application. Each row includes the set of books name, description, functional currency, and other information. This table corresponds to the Set of Books form.

## MRP\_PLANS

MRP\_PLANS stores the settings that determine the behavior of the planning process for a given plan name. Each row stores information for a particular plan name.

There are two sets of columns for a given setting. The columns that begin with "CURR" store the current value for that setting, or the value that will be used the next time the plan is run. The corresponding columns that do not begin with "CURR" store the setting that was used the last time the plan was run. The values are copied from the first set of columns to the second set during the Snapshot and Planner processes.

The columns CURRENT\_PLANNER\_LEVEL and PLANNER\_BATCH\_NUMBER are used by the Planner to coordinate the planning of items by the Planner Workers running in parallel.

This table is populated by the Launch Planning Process form.

## MRP\_RECOMMENDATIONS

MRP\_RECOMMENDATIONS stores Oracle Master Scheduling/MRP's suggestions for a given plan. Each purchase order, purchase requisition, purchase order in receiving, discrete job, nonstandard job, intransit shipment, intransit receipt, planned order and suggested repetitive schedule will have a corresponding row in MRP\_RECOMMENDATIONS. The NEW\_ORDER\_QUANTITY and NEW\_SCHEDULE\_DATE store Oracle Master Scheduling/MRP's recommended quantities and dates for an order. OLD\_ORDER\_QUANTITY and OLD\_SCHEDULE\_DATE store the current quantity and date for discrete jobs, purchase orders, purchase requisitions, nonstandard jobs, intransit shipments and intransit receipts. These columns will store null values for planned orders and recommended repetitive schedules. The difference between OLD\_SCHEDULE\_DATE and NEW\_SCHEDULE\_DATE represents the planning process's reschedule recommendation. In the current version, the planning process does not recommend quantity changes. Thus OLD\_ORDER\_QUANTITY and NEW\_ORDER\_QUANTITY will be equal.

For suggested repetitive schedules, NEW\_SCHEDULE\_DATE will store the first unit completion date. The last unit completion date will be stored in LAST\_UNIT\_COMPLETION\_DATE. FIRST\_UNIT\_START\_DATE and LAST\_UNIT\_START\_DATE will hold the first unit start date and last unit start date, respectively. NEW\_PROCESSING\_DAYS will be equal to the number of workdays between LAST\_UNIT\_COMPLETION\_DATE and NEW\_SCHEDULE\_DATE plus one (for example, if LAST\_UNIT\_COMPLETION\_DATE equals August 14 and NEW\_SCHEDULE\_DATE equals August 12, and there are no holidays between those dates, NEW\_PROCESSING\_DAYS will equal 3). NEW\_ORDER\_QUANTITY will store the daily rate for the suggested repetitive schedule. OLD\_SCHEDULE\_DATE and OLD\_ORDER\_QUANTITY will be null.

FIRM\_DATE and FIRM\_QUANTITY will store the firm dates and quantities of planned orders. Both of these columns will be populated only for planned orders with a FIRM\_PLANNED\_TYPE of Yes. When the planner first creates a planned order, it is set to non-firm, and will have null values in FIRM\_DATE and FIRM\_QUANTITY. FIRM\_DATE and FIRM\_QUANTITY can be updated using the Planner Workbench form.

QUANTITY\_IN\_PROCESS will store that portion of a planned order or recommended repetitive schedule that was loaded into WIP or PO via

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

the Planner's Workbench for creation of a Discrete Job, a Purchase Requisition or a WIP repetitive schedule. `QUANTITY_IN_PROCESS` will be populated by the implementation process of the Planner Workbench. `IMPLEMENTED_QUANTITY` will store the quantity of the portion of the planned order that was implemented into a Discrete Job or a Purchase Requisition. It will be updated by the feedback process of the Planning Manager. The feedback process will increment the `IMPLEMENTED_QUANTITY` and decrement the `QUANTITY_IN_PROCESS` based on the quantity of the Discrete Job or Purchase Requisition.

`DISPOSITION_ID` is a foreign key to `MRP_ITEM_WIP_ENTITIES` for discrete jobs. For nonstandard jobs, it references `MRP_WIP_COMPONENTS`. For purchase orders, purchase requisitions, purchase orders in receiving, intransit shipments, and intransit receipts, `DISPOSITION_ID` will be a foreign key to `MRP_ITEM_PURCHASE_ORDERS`. `DISPOSITION_ID` will be equal to `MRP_RECOMMENDATIONS.TRANSACTION_ID` for planned orders and suggested repetitive schedules.

For purchased items, `OLD_DOCK_DATE` and `NEW_DOCK_DATE` represent the date purchase orders and purchase requisitions are due to arrive on the dock, and will match the promise dates in the purchasing system. For manufactured parts, `OLD_DOCK_DATE` and `NEW_DOCK_DATE` represent the dates work orders are due to be completed.

`NEW_WIP_START_DATE` represents the date the discrete job must be started in order for it to be completed on time. For discrete entries, it will be set to the dock date minus the processing lead time of the item (in workdays). Its value will have no meaning for repetitive entries.

An order may have some processing time necessary before the order begins. `NEW_ORDER_PLACEMENT_DATE` and `OLD_ORDER_PLACEMENT_DATE` represent the dates such activity must begin for the order to be started on time. They will be the WIP start date minus the preprocessing lead time (in workdays). Its value will have no meaning for repetitive entries.

If the planning process recommends that an order be cancelled, `DISPOSITION_STATUS_TYPE` will be set to 2 (Cancel order).

The implement columns hold the implementation details for planned orders, purchase requisitions, and discrete jobs and are populated by the Planner Workbench.

This information is used to insert records into the  
WIP\_JOB\_SCHEDULE\_INTERFACE or  
PO\_REQUISITIONS\_INTERFACE.

MRP\_RECOMMENDATIONS is populated by the Planner.

## MRP\_RELIEF\_INTERFACE

MRP\_RELIEF\_INTERFACE is a table which stores information used for master schedule relief. Each entry represents a transaction that affects either a master production or master demand schedule.

Entries are created by WIP and PO via database triggers on the tables WIP\_DISCRETE\_JOBS and MTL\_SUPPLY, respectively. A row is created every time a discrete job, purchase order or purchase requisition is created, closed, or modified.

When rows are inserted to MRP\_RELIEF\_INTERFACE the process\_status is set to 2 (waiting to be processed). Relief is performed by MRLSCC, a subroutine of the Planning Manger Worker. This program looks for all rows with a PROCESS\_STATUS of 2, a null ERROR\_MESSAGE and a null REQUEST\_ID. It changes the PROCESS\_STATUS of these rows to 3 (in process). The appropriate routine is then called to consume the rows flagged. If schedule consumption fails for a row the PROCESS\_STATUS will be changed to 4 (processing error) and an error message will be written to the ERROR\_MESSAGE field of the row. If schedule consumption succeeds for a row, the PROCESS\_STATUS will be changed to 5.

The SOURCE\_CODE column can be used to identify third party software for loading the MRP\_RELIEF\_INTERFACE table. The SOURCE\_LINE\_ID can be used to show where the imported data came from within the third party software (for example, table\_name, field\_name).

## MRP\_SCHEDULE\_DESIGNATORS

MRP\_SCHEDULE\_DESIGNATORS stores MPS and MDS schedule names. A schedule name uniquely identifies a master schedule.

MPS\_RELIEF indicates whether or not the Planning Manager should consume this master demand or master production schedule.

INVENTORY\_ATP\_FLAG indicates whether or not inventory can consider this master production schedule as a source of supply as defined by ATP rules. It will always be No for master demand schedules.

This table is populated by the Define Master Schedule Names form.

## MRP\_SYSTEM\_ITEMS

MRP\_SYSTEM\_ITEMS stores a copy of items planned by the planning process. Most of the columns in MRP\_SYSTEM\_ITEMS correspond to columns from the Oracle Inventory item master table, MTL\_SYSTEM\_ITEMS.

LOW\_LEVEL\_CODE stores the low level code of the item. This is used to determine the order in which items are planned during the planning process (see MRP\_LOW\_LEVEL\_CODES for details).

Lead time is stored in several columns. The static lead time, which is based upon the lead time lot size and calculated by the lead time rollup, is stored in the columns PREPROCESSING\_LEAD\_TIME, POSTPROCESSING\_LEAD\_TIME and FULL\_LEAD\_TIME. The lead time rollup also calculates CUMULATIVE\_TOTAL\_LEAD\_TIME and CUM\_MANUFACTURING\_LEAD\_TIME.

PLAN\_MAKE\_BUY\_CODE determines whether the planning process will plan this item as a purchased item or a manufactured item.

The columns PLAN\_START\_DATE, PLAN\_COMPLETION\_DATE, PLANNER\_BATCH\_NUMBER and PLANNER\_STATUS\_FLAG are used internally by the Planner to coordinate the planning of items done by multiple Planner Workers running in parallel.

The column INVENTORY\_USE\_UP\_DATE is the date that the planning process will exhaust current nettable inventories, based on projected gross requirements.

This table is populated by the Snapshot, and is used by the Planner. This table is derived mainly from MTL\_SYSTEM\_ITEMS.

## MTL\_CATEGORIES\_B

MTL\_CATEGORIES\_B is the code combinations table for item categories. Items are grouped into categories within the context of a category set to provide flexible grouping schemes.

The item category is a key flexfield with a flex code of MCAT. The flexfield structure identifier is also stored in this table to support the ability to define more than one flexfield structure (multi-flex).

Item categories now support multilingual category description. MLS is implemented with a pair of tables: MTL\_CATEGORIES\_B and MTL\_CATEGORIES\_TL. MTL\_CATEGORIES\_TL table holds translated Description for Categories.

## MTL\_DEMAND

This table stores demand and reservation information used in Available To Promise, Planning and other Manufacturing functions. There are three major row types stored in the table: Summary Demand rows, Open Demand Rows, and Reservation Rows.

Summary Demand is direct demand for an item within an organization on a particular date, which originated from a particular source. For hard reservations there are several columns which further define what the reservation is for, and where it is being placed. Currently, four sources of demand are supported, Sales Order, Account, Account Alias, and User Defined transaction sources. Five different types of demand, denoted by DEMAND\_TYPE column are used. These five types are Model, Option Class, Option Item, Configuration Item and Derived. Derived demand rows are inserted by BOM Demand exploder when demanded item has ATPable components. Each Summary Demand row may be associated with one or more Reservation rows. Reservation may be placed against a particular inventory control (such as a specific subinventory, locator, revision and lot) against any sources (such as Account Number, Account Alias, Sales Order or even User-Defined sources). Each Summary Demand row may be associated with one or more detailed rows. The detailed rows consist of reservations and open demand. A reservation row represents a firm promise of a supply source. Currently, two types of reservation are supported, reservations to on-hand, and reservations to WIP jobs. Each summary demand row may be associated with one and only one open demand row. Open Demand rows represent the un-reserved portion of the the Summary Demand.

EXTERNAL_SOURCE_CODE	NULL	VARCHAR2(30)	Used to document external sourced demand
EXTERNAL_SOURCE_LINE_ID	NULL	NUMBER	Used to document external sourced demand
USER_LINE_NUM	NULL	VARCHAR2(30)	User identifier of demand source. For sales order demand this is SO_LINES.LINE_NUMBER
USER_DELIVERY	NULL	VARCHAR2(30)	User identifier of demand source. For sales order demand it is taken from SO_LINES.LINE_NUMBER of the schedule line, used for display only
SCHEDULE_ID	NULL	NUMBER	(not currently used)
AUTODETAIL_GROUP_ID	NULL	NUMBER	ID used when calling the Autodetail process, not null if autodetail process is successful, only populated for hard reservation rows
SUPPLY_SOURCE_TYPE	NULL	NUMBER	Source of supply for reservation, only populated if reservation is not to on hand
SUPPLY_SOURCE_HEADER_ID	NULL	NUMBER	Header id of reservation supply source, for example if supply source is WIP then it is WIP_DISCRETE_JOBS.WIP_ENTITY_ID
SUPPLY_GROUP_ID	NULL	NUMBER	Used to group demand rows for automatic WIP job creation via the Load Final Assembly Orders program, reset to null after program completes
UPDATED_FLAG	NULL	NUMBER	Flag to indicate if row requires processing by MRP Forecast Consumption program, reset to 2 (No) after MRP processing

Column Descriptions (Continued)

Name	Null?	Type	Description
REVISION	NULL	VARCHAR2(3)	The item revision reserved, only populated for reservation rows that reference a specific revision
LOT_NUMBER	NULL	VARCHAR2(30)	The specific lot number reserved, only populated for reservation rows for a specific lot number
SERIAL_NUMBER	NULL	VARCHAR2(30)	(not currently used)
SUBINVENTORY	NULL	VARCHAR2(10)	Subinventory demanded or reserved, can be populated for summary demand
LOCATOR_ID	NULL	NUMBER	Location identifier for reserved item
COMPONENT_SEQUENCE_ID (PK)	NULL	NUMBER	Id of BOM structure for demand associated with ATO Models. If DEMAND_TYPE is 1 (Model) then is BOM_BILL_OF_MATERIALS.BILL_SEQUENCE_ID if DEMAND_TYPE != 1 (Model) then is BOM_INVENTORY_COMPONENTS.COMPONENT_SEQUENCE_ID
PARENT_COMPONENT_SEQ_ID	NULL	NUMBER	MTL_DEMAND.COMPONENT_SEQUENCE_ID of parent in BOM structure
RTO_MODEL_SOURCE_LINE	NULL	VARCHAR2(30)	DEMAND_SOURCE_LINE of the Model demand row for all demand and reservation rows associated with an ATO Model demand row
RTO_PREVIOUS_QTY	NULL	NUMBER	The PRIMARY_UOM_QUANTITY the last time that the ATO Order Change "report" ran
CONFIG_STATUS	NULL	NUMBER	Code to indicate status of Configured item creation for ATO Model demand
AVAILABLE_TO_MRP	NULL	NUMBER	Flag to indicate if demand should be visible to MRP
AVAILABLE_TO_ATP	NULL	NUMBER	Flag to indicate if demand should be visible to ATP
ESTIMATED_RELEASE_DATE	NULL	DATE	Requirement date - Assembly Lead time. This column is only populated for Configuration Items created by Link Configuration Item to Order (bmlcpb).
DEMAND_CLASS	NULL	VARCHAR2(30)	Demand class of the demand row
ROW_STATUS_FLAG	NULL	NUMBER(2)	used by the demand management functions to indicate the status of a row; 1 - Active; 2 - Complete
ORDER_CHANGE_REPORT_FLAG	NULL	NUMBER	Flag to indicate rows for ATO items that have changed after a configuration item has been created. The ATO Model Order Change report will select these rows and update to 2 (No)
ATP_LEAD_TIME	NULL	NUMBER(22)	Number of days earlier than the parent requirement data that a component must be available to allow for assembly of the parent.
EXPLOSION_EFFECTIVITY_DATE	NULL	DATE	Date used by BOM exploder when a fixed BOM structure as of a certain date is required

## MTL\_INTERFACE\_PROC\_CONTROLS

MTL\_INTERFACE\_PROC\_CONTROLS is seeded with the list of background transaction processes Oracle Manufacturing supports. These background processes can have user- determined process intervals and for some you may decide the number of transaction rows each worker processes at a time. The PROCESS\_STATUS column tells if the corresponding background process is active.

## MTL\_ITEM\_LOCATIONS

MTL\_ITEM\_LOCATIONS is the definition table for stock locators. The associated attributes describe which subinventory this locator belongs to, what the locator physical capacity is, etc.

The locator is a key flexfield. The Flexfield Code is MTLL.

#### Database Triggers

Trigger Name : MTL\_ITEM\_LOCATIONS\_T  
Trigger Time : BEFORE  
Trigger Level : ROW  
Trigger Event : INSERT

This trigger is executed during creation of a new locator. The values in SEGMENT19 and SEGMENT20 are copied into PROJECT\_ID and TASK\_ID columns respectively. SEGMENT19 and SEGMENT20 are reserved for Oracle Project Manufacturing to store the project and task segment values in the locator flexfield.

## MTL\_ITEM\_REVISIONS

MTL\_ITEM\_REVISIONS stores revision levels for an inventory item. When an item is defined a starting revision record is written out to this table, so every item will at least have one starting revision.

The presence of an engineering change notice code in this table indicates that the engineering system issued the revision through the implementation process. Along with the engineering change order, an implementation date and initiation date will be stored.

## MTL\_ITEM\_STATUS

MTL\_ITEM\_STATUS is the definition table for material status codes. Status code is a required item attribute. It indicates the status of an item, i.e., Active, Pending, Obsolete.

The status optionally controls several 'function controlling' item attributes (status attributes) and can be used to disable the item from being used by the various application products.

The values of the individual status attributes associated with an item status are stored in MTL\_STATUS\_ATTRIBUTE\_VALUES.

## MTL\_ITEM\_SUB\_INVENTORIES

MTL\_ITEM\_SUB\_INVENTORIES maintains a listing of subinventories assigned to an inventory or engineering item.

These subinventories make up the list of valid subinventories when transacting this specific item and the user has specified (in the master window) that the item must use subinventories restricted to a pre-defined list.

## MTL\_LOT\_NUMBERS

MTL\_LOT\_NUMBERS stores the definition and expiration date of all lot numbers in inventory.

Since the primary key consists of LOT\_NUMBER, ORGANIZATION\_ID, and INVENTORY\_ITEM\_ID, a lot number could exist in more than one organization or for different items.

## MTL\_MATERIAL\_TRANSACTIONS

MTL\_MATERIAL\_TRANSACTIONS stores a record of every material transaction or cost update performed in Inventory.

Records are inserted into this table either through the transaction processor or by the standard cost update program. The columns TRANSACTION\_TYPE\_ID, TRANSACTION\_ACTION\_ID, TRANSACTION\_SOURCE\_TYPE\_ID, TRANSACTION\_SOURCE\_ID and TRANSACTION\_SOURCE\_NAME describe what the transaction is and against what entity it was performed.

All accounting journal entries for a given transaction are stored in MTL\_TRANSACTION\_ACCOUNTS, joined by the column TRANSACTION\_ID.

If the item is under lot control then the lot records are stored in MTL\_TRANSACTION\_LOT\_NUMBERS, joined by the column TRANSACTION\_ID. If the item is under serial control then the serial records are stored in MTL\_UNIT\_TRANSACTIONS, joined by the column TRANSACTION\_ID. The Item revision and locator control are stored in the columns REVISION and LOCATOR\_ID respectively.

Transfer transactions are represented as two single records in the table. They are related through the column TRANSFER\_TRANSACTION\_ID, which contains the TRANSACTION\_ID of the other transaction in the transfer.

The index MTL\_MATERIAL\_TRANSACTIONS\_UPGD is used only during install and upgrade, and will be dropped during the course thereof, but is included here for completeness.

## Database Triggers

Trigger Name : AX\_MTL\_MAT\_TRANS\_ARI1  
Trigger Time : AFTER  
Trigger Level : ROW  
Trigger Event : INSERT

This trigger captures information needed to create subledger accounting events when Oracle Inventory and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger captures accounting events related to Oracle Inventory cost updates. It fires right after the cost update program create a cost update for an inventory transaction. This trigger populates the AX\_EVENTS table.

Trigger Name : AX\_MTL\_MAT\_TRANS\_BRU1  
Trigger Time : BEFORE  
Trigger Level : ROW  
Trigger Event : UPDATE

This trigger captures information needed to create subledger accounting events when Oracle Inventory and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger captures accounting events related to Oracle Inventory material transactions. It executes when the inventory transaction is processed by the cost processor. This trigger populates the AX\_EVENTS table.

Trigger Name : JA\_AU\_LOCAL\_ACCOUNTING  
Trigger Time : AFTER  
Trigger Level : ROW  
Trigger Event : UPDATE

This trigger is on the COSTED\_FLAG column of MTL\_MATERIAL\_TRANSACTIONS. It calls a PL/SQL package to update MTL\_TRANSACTION\_ACCOUNTS.REFERENCE\_ACCOUNT with the value in MTL\_MATERIAL\_TRANSACTIONS.DISTRIBUTION\_ACCOUNT\_ID. This trigger is installed and active only if you have installed Asia/Pacific Localizations (JA).

## MTL\_MATERIAL\_TRANSACTIONS\_TEMP

MTL\_MATERIAL\_TRANSACTIONS\_TEMP is the gateway for all material transactions.

Records are processed from this table into Inventory through the transaction processor. All Inventory transaction forms write directly to this table. Outside applications must write transaction records to MTL\_TRANSACTIONS\_INTERFACE to be processed through MTL\_MATERIAL\_TRANSACTIONS\_TEMP and the transaction processor by the Transaction Worker concurrent program.

Lots and serial numbers for a MTL\_MATERIAL\_TRANSACTIONS\_TEMP(MMTT) record are stored in the tables MTL\_TRANSACTION\_LOTS\_TEMP(MTLT) and MTL\_SERIAL\_NUMBERS\_TEMP(MSNT). If the item is under lot control, then MMTT.TRANSACTION\_TEMP\_ID joins to MTLT.TRANSACTION\_TEMP\_ID. If the item is also under serial number control, then MTLT.SERIAL\_TRANSACTION\_TEMP\_ID joins to MSNT.TRANSACTION\_TEMP\_ID. If the item is only under serial number control, then MMTT.TRANSACTION\_TEMP\_ID joins to MSNT.TRANSACTION\_TEMP\_ID.

Transfer transactions are stored in this table as a single record. The transaction processor creates two transactions from the single record.

## MTL\_MATERIAL\_TXN\_ALLOCATIONS

MTL\_MATERIAL\_TXN\_ALLOCATIONS stores the repetitive schedules charged by a material transaction. Each row contains the quantity transacted to each schedule for a given transaction. Oracle Work in Process uses this information to report the changes to individual schedules for multi-schedule material transactions.

## MTL\_ONHAND\_QUANTITIES

MTL\_ONHAND\_QUANTITIES stores quantity on hand information by control level and location.

MTL\_ONHAND\_QUANTITIES is maintained as a stack of receipt records, which are consumed by issue transactions in FIFO order. The quantity on hand of an item at any particular control level and location can be found by summing TRANSACTION\_QUANTITY for all records that match the criteria. Note that any transactions which are committed to the table MTL\_MATERIAL\_TRANSACTIONS\_TEMP are considered to be played out as far as quantity on hand is concerned in Inventory transaction forms. All our Inquiry forms and ABC compile are only based on MTL\_ONHAND\_QUANTITIES.

MTL\_ONHAND\_QUANTITIES has two columns, CREATE\_TRANSACTION\_ID and UPDATE\_TRANSACTION\_IDs to join to MTL\_MATERIAL\_TRANSACTIONS.TRANSACTION\_ID the transactions that created the row and the transaction that last updated a row.

# MTL\_PARAMETERS

MTL\_PARAMETERS maintains a set of default options like general ledger accounts; locator, lot, and serial controls; inter-organization options; costing method; etc. for each organization defined in Oracle Inventory.

Each organization's item master organization (MASTER\_ORGANIZATION\_ID) and costing organization (COST\_ORGANIZATION\_ID) are maintained here.

You specify which manufacturing calendar the organization will use (CALENDAR\_CODE), as well as the set of exceptions to this calendar (CALENDAR\_EXCEPTION\_SET\_ID).

NEGATIVE\_INV\_RECEIPT\_CODE indicates whether this organization will allow negative balances in inventory. It is used in the transaction system to ensure, for example, that you do not over-issue a particular item (if you have indicated that negative balances are not allowed).

For lot number and serial number auto-generation, you can specify whether you want the numbers generated from defaults defined at the organization level or the item level (LOT\_NUMBER\_GENERATION,SERIAL\_NUMBER\_GENERATION). You can also specify uniqueness constraints for lot numbers (LOT\_NUMBER\_UNIQUENESS) and serial numbers (SERIAL\_NUMBER\_TYPE).

Among the accounting defaults that can be defined here are valuation accounts, receiving accounts, profit and loss accounts, and inter-organization transfer accounts.

This trigger captures information needed to create subledger accounting events when Oracle Inventory and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger ensures that an INTRANS subinventory exists for every inventory organizations. If it does not exist, the subinventory will be created in the table, MTL\_SECONDARY\_INVENTORY.

## MTL\_RTG\_ITEM\_REVISIONS

MTL\_RTG\_ITEM\_REVISIONS stores revision levels for routings. When a routing is defined a revision must be inserted into this table, so that every routing has at least one valid revision.

This table is analagous to MTL\_ITEM\_REVISIONS, but for routings instead of items. However, since engineering changes don't yet act on routings, routing revisions will never come directly from an ECO as they do for items.

## MTL\_SALES\_ORDERS

MTL\_SALES\_ORDERS stores Inventory's local definition of sales orders.

Unlike account numbers which are stored as flexfields in GL\_CODE\_COMBINATIONS, or purchase orders which are stored in PO\_HEADERS, sales orders are not assumed to originate in any particular application. MTL\_SALES\_ORDERS exists for the purpose of mapping sales orders between other applications and Inventory. MTL\_SALES\_ORDERS is a key flexfield table with no structure defining column or set defining column. The flexfield code for this table is MKTS. Only one structure for the flexfield may be defined for any installation of Inventory. Inventory demand interface and demand manager will validate sales orders on segment values, and will create a new SALES\_ORDER\_ID when necessary.

## MTL\_SECONDARY\_INVENTORIES

MTL\_SECONDARY\_INVENTORIES is the definition table for the subinventory. A subinventory is a section of inventory, i.e., raw material, finished goods, etc. Subinventories are assigned to items (in a many to one relationship), indicating a list of valid places where this item will physically exist in inventory.

Other attributes include general ledger accounts, demand picking order, locator type, availability type, and reservable type.

You can also specify whether this subinventory is an expense or asset subinventory (ASSET\_INVENTORY), or whether quantities are tracked (QUANTITY\_TRACKED).

## Database Triggers

Trigger Name : AX\_MTL\_SEC\_INVENTORY\_ARDI1  
Trigger Time : AFTER  
Trigger Level : ROW  
Trigger Event : INSERT, DELETE

Oracle Proprietary, Confidential Information--Use Restricted by Contract

This trigger captures information needed to create subledger accounting events when Oracle Inventory and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger synchronizes the table MTL\_SECONDARY\_INVENTORIES and AX\_SECONDARY\_INVENTORIES. It ensure that a subinventory exists for every inventory organizations in AX\_SECONDARY\_INVENTORIES.

## MTL\_SECONDARY\_LOCATORS

MTL\_SECONDARY\_LOCATORS stores all locators within a subinventory for a specific item.

These locators make up the valid list of locators when transacting that specific item to/from the subinventory, and the user has specified (in the Master Item window) that the item must use locators restricted to a pre-defined list.

## MTL\_SERIAL\_NUMBERS

MTL\_SERIAL\_NUMBERS stores the definition and current status of all serial numbers in Oracle Inventory. These serial numbers are also used in other areas of Oracle Manufacturing.

A serial number can have one of four statuses:

- Defined but not used
- Resides in stores
- Issued out of stores
- Resides in intransit

The serial generation program populates this table, given the number of serial numbers to create and the starting number and prefix.

## MTL\_SERIAL\_NUMBERS\_TEMP

MTL\_SERIAL\_NUMBERS\_TEMP holds temporary serial number transaction records for a parent record in MTL\_MATERIAL\_TRANSACTIONS\_TEMP. Data in this table will eventually reside in MTL\_UNIT\_TRANSACTIONS after processing by the transaction processor. TRANSACTION\_TEMP\_ID joins to TRANSACTION\_TEMP\_ID in MTL\_MATERIAL\_TRANSACTIONS\_TEMP when under serial control. If also under lot control it joins to MTL\_TRANSACTION\_LOTS\_TEMP.SERIAL\_TRANSACTION\_TEMP\_ID.

It is possible to have child records in this table without a parent record due to the autocommit feature of the Serial Number Entry form. Periodic deletion of irrelevant data from this table is desired.

## MTL\_SYSTEM\_ITEMS\_B

MTL\_SYSTEM\_ITEMS\_B is the definition table for items. This table holds the definitions for inventory items, engineering items, and purchasing items. You can specify item-related information in fields such as: Bill of Material, Costing, Purchasing, Receiving, Inventory, Physical attributes, General Planning, MPS/MRP Planning, Lead times, Work in Process, Order Management, and Invoicing.

You can set up the item with multiple segments, since it is implemented as a flexfield. Use the standard 'System Items' flexfield that is shipped with the product to configure your item flexfield. The flexfield code is MSTK.

The primary key for an item is the INVENTORY\_ITEM\_ID and ORGANIZATION\_ID. Therefore, the same item can be defined in more than one organization.

Each item is initially defined in an item master organization. The user then assigns the item to other organizations that need to recognize this item; a row is inserted for each new organization the item is assigned to. Many columns such as MTL\_TRANSACTIONS\_ENABLED\_FLAG and BOM\_ENABLED\_FLAG correspond to item attributes defined in the MTL\_ITEM\_ATTRIBUTES table. The attributes that are available to the user depend on which Oracle applications are installed. The table MTL\_ATTR\_APPL\_DEPENDENCIES maintains the relationships between item attributes and Oracle applications.

Two unit of measure columns are stored in MTL\_SYSTEM\_ITEMS table. PRIMARY\_UOM\_CODE is the 3-character unit that is used throughout Oracle Manufacturing. PRIMARY\_UNIT\_OF\_MEASURE is the 25-character unit that is used throughout Oracle Purchasing.

Items now support multilingual description. MLS is implemented with a pair of tables: MTL\_SYSTEM\_ITEMS\_B and MTL\_SYSTEM\_ITEMS\_TL. Translations table (MTL\_SYSTEM\_ITEMS\_TL) holds item descriptions in multiple languages. DESCRIPTION column in the base table (MTL\_SYSTEM\_ITEMS\_B) is for backward compatibility and is maintained in the installation base language only.

## Database Triggers

Trigger Name : MTL\_SYSTEM\_ITEMS\_T6\_BOM  
Trigger Time : AFTER  
Trigger Level : ROW  
Trigger Event : INSERT

This trigger creates categories corresponding to product family items being created. It also assigns product family items to their corresponding categories. The trigger uses data that has been stored in the BOM\_PFI\_PVT package PL/SQL tables by the row level trigger.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T1\_BOM  
Trigger Time : BEFORE  
Trigger Level : ROW  
Trigger Event : INSERT

This trigger stores product family item identifier used later by the statement level trigger for creation of the corresponding category when a new product family item is defined. It makes calls to the BOM\_PFI\_PVT package procedures.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T2\_BOM  
Trigger Time : BEFORE  
Trigger Level : ROW  
Trigger Event : DELETE

This trigger stores corresponding category identifier that is used later by the statement level trigger for deletion of the category when the product family item is deleted. It makes calls to BOM\_PFI\_PVT package procedures.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T3\_BOM  
Trigger Time : BEFORE  
Trigger Level : ROW  
Trigger Event : UPDATE

This trigger performs the following functions depending on conditions: 1. Creates product family category when item attribute BOM\_ITEM\_TYPE is updated to 5. 2. When the item attribute BOM\_ITEM\_TYPE is changed from 5 to any other value, the trigger stores corresponding category identifier for later deletion of the category by the statement level trigger. 3. Removes an item assignment to the corresponding product family category when the PRODUCT\_FAMILY\_ITEM\_ID column of that item is changed. 4. When the PRODUCT\_FAMILY\_ITEM\_ID column is changed to non-null, stores category ID in the BOM\_PFI\_PVT package PL/SQL table for an item assignment to that category later by the statement-level trigger.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T4\_BOM  
Trigger Time : AFTER  
Trigger Level : STATEMENT  
Trigger Event : UPDATE

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

This trigger performs the following functions depending on updates of the BOM\_ITEM\_TYPE and PRODUCT\_FAMILY\_ITEM\_ID columns: 1. Creates categories corresponding to product family items. 2. Assigns new product family items to their corresponding categories. 3. Deletes product family categories. The trigger uses data that has been stored in the BOM\_PFI\_PVT package PL/SQL tables by the row level trigger.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T5\_BOM  
Trigger Time : AFTER  
Trigger Level : ROW  
Trigger Event : DELETE

This trigger deletes categories corresponding to product family items being deleted. The trigger uses data that has been stored in the BOM\_PFI\_PVT package PL/SQL tables by the row level trigger.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T2\_VEH  
Trigger Time : AFTER  
Trigger Level : ROW  
Trigger Event : UPDATE

This trigger exports Automotive specific Item data to CARaS to maintain data consistency whenever data in Oracle is changed. It calls the Automotive export launcher procedure which validates the Automotive specific data before it exports it to CARaS.

Item data comes from the following tables

ECE\_TP\_GROUP  
ECE\_TP\_DETAILS  
MTL\_SYSTEM\_ITEMS  
MTL\_CUSTOMER\_ITEMS  
MTL\_CUSTOMER\_ITEM\_XREFS  
VEH\_MTL\_CUSTOMER\_ITEMS  
WSH\_CONTAINER\_LOAD

The above tables have triggers to export Item data to CARaS.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T1  
Trigger Time : BEFORE  
Trigger Level : ROW  
Trigger Event : UPDATE

The trigger is executed when the COSTING\_ENABLED\_FLAG field in the MTL\_SYSTEM\_ITEMS table is modified from Yes to No or vice versa. Before updating COSTING\_ENABLED\_FLAG field, the trigger performs the following tasks for each record that is modified:

- Insert a record into CST\_ITEM\_COSTS table if COSTING\_ENABLED\_FLAG field is changed from No to Yes.
- Delete a record from CST\_ITEM\_COSTS table if COSTING\_ENABLED\_FLAG field is changed from Yes to No.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T6\_ICX  
Trigger Time : AFTER  
Trigger Level : ROW  
Trigger Event : INSERT

This trigger places a re-index request on the ConText queue. The trigger is installed via a post-install step for Web Requisitions and is required only if this module is used. There is a prerequisite that ConText be installed.

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

Trigger Name : MTL\_SYSTEM\_ITEMS\_T7\_ICX  
Trigger Time : AFTER  
Trigger Level : ROW  
Trigger Event : UPDATE

This trigger places a re-index request on the ConText queue. The trigger is installed via a post-install step for Web Requisitions and is required only if this module is used. There is a prerequisite that ConText be installed.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T8\_ICX  
Trigger Time : AFTER  
Trigger Level : ROW  
Trigger Event : DELETE

This trigger places a re-index request on the ConText queue. The trigger is installed via a post-install step for Web Requisitions and is required only if this module is used. There is a prerequisite that ConText be installed.

## MTL\_TRANSACTIONS\_INTERFACE

MTL\_TRANSACTIONS\_INTERFACE is the interface point between non- Inventory applications and the Inventory transaction module.

Transaction Manager concurrent program polls this table at a user-specified process interval, and submits the Transaction Workers to process them. Processing consists of data derivation, validation, and transfer of records from MTL\_TRANSACTIONS\_INTERFACE, MTL\_TRANSACTION\_LOTS\_INTERFACE, and MTL\_SERIAL\_NUMBERS\_INTERFACE into their respective TEMP tables, from where they are processed by the transaction processor.

MTL\_TRANSACTIONS\_INTERFACE follows the Inventory standard for interfacing flexfields. Any parameters which are represented by flexfields may be entered in the interface table either as code combination identifiers or as flexfield segment combinations. The Transaction Worker will validate that any given identifiers are valid and enabled. If no identifier is given, then the Transaction Worker will validate and decode the flexfield segment values, and where appropriate, create new flexfield combinations in the database.

The Transaction Manager picks up the rows to process based on the LOCK\_FLAG, TRANSACTION\_MODE, PROCESS\_FLAG to manipulate the records in the table. Only records with TRANSACTION\_MODE of 3, LOCK\_FLAG of '2', and PROCESS\_FLAG of '1' will be picked up by the Transaction Manager and assigned to a Transaction Worker. If a record fails to process completely, then PROCESS\_FLAG will be set to '3' and ERROR\_CODE and ERROR\_EXPLANATION will be populated with the cause for the error.

## Column Descriptions

Name	Null?	Type	Description
TRANSACTION_INTERFACE_ID	NULL	NUMBER	Transaction interface line identifier
TRANSACTION_HEADER_ID	NULL	NUMBER	Transaction group identifier and Workers, only user-specified values will be ignored
SOURCE_CODE	NOT NULL	VARCHAR2(30)	Transaction source identifier; Used for auditing and process control
SOURCE_LINE_ID	NOT NULL	NUMBER	Transaction source line identifier; Used for auditing only
SOURCE_HEADER_ID	NOT NULL	NUMBER	Transaction source group identifier; Used for process control by user-submitted Transaction Workers
PROCESS_FLAG	NOT NULL	NUMBER(1)	Flag indicating whether transaction is ready to be processed by the Transaction Manager or Worker ('1' for ready, '2' for not ready); if the transaction fails for some reason, the Transaction Worker sets the value of PROCESS_FLAG to '3'
VALIDATION_REQUIRED	NULL	NUMBER	Full validation required flag
TRANSACTION_MODE	NOT NULL	NUMBER	Code that indicates whether the transaction is to be processed in immediate concurrent processing mode (2) or background processing mode (3)
LOCK_FLAG	NULL	NUMBER(1)	Flag indicating whether the transaction is locked by the Transaction Manager or Workers ('1' for locked, '2' or NULL for not locked); this prevents two different Workers from processing the same transaction; You should always specify '2'

# MTL\_TRANSACTION\_ACCOUNTS

MTL\_TRANSACTION\_ACCOUNTS holds the accounting information for each material transaction in MTL\_MATERIAL\_TRANSACTIONS. Oracle Inventory uses this information to track the financial impact of your quantity moves.

The two tables are joined by the TRANSACTION\_ID, and in most instances, there are at least two account rows for every material transaction. For some transactions, such as expense items or expense subinventories, you may not have any accounting. You should not join these two tables by ORGANIZATION\_ID because inter-organizations transfers occur across organizations.

Each row in this table represents a debit or credit accounting entry, and the sum of all rows for a given transaction identifier should be zero. Each row includes the account, transaction date, transaction value, purpose (ACCOUNTING\_LINE\_TYPE), and the source of the charges (TRANSACTION\_SOURCE\_TYPE\_ID).

The TRANSACTION\_VALUES and BASE\_TRANSACTION\_VALUES are transferred to the GL\_INTERFACE\_TABLE through the period close or GL transfer process, and until this process is run, the GL\_BATCH\_ID is -1.

The index MTL\_TRANSACTION\_ACCOUNTS\_N2 is used only during install and upgrade, and will be dropped during the course thereof, but is included here for completeness. The index is named such to coincide with the equivalent index in R9.

## Database Triggers

Trigger Name : AX\_MTL\_TRANS\_ACCOUNTS\_BRI1  
 Trigger Time : BEFORE  
 Trigger Level : ROW  
 Trigger Event : INSERT

This trigger captures information needed to create subledger accounting events when Oracle Inventory and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger prevents an inventory transaction from being posted twice to GL, once in Global Accounting Engine and again by Oracle Inventory.

## MTL\_TRANSACTION\_LOTS\_TEMP

MTL\_TRANSACTION\_LOTS\_TEMP stores lot number information for transactions in the MTL\_MATERIAL\_TRANSACTIONS\_TEMP table.

Many lot number records may be specified for a given transaction record. TRANSACTION\_TEMP\_ID joins to TRANSACTION\_TEMP\_ID in MTL\_MATERIAL\_TRANSACTIONS\_TEMP.

SERIAL\_TRANSACTION\_TEMP\_ID joins to TRANSACTION\_TEMP\_ID in MTL\_SERIAL\_NUMBERS\_TEMP when also under serial control

It is possible to have child records in this table without a parent record due to the autocommit feature of the Lot Entry window. Periodic deletion of irrelevant data from this table is desired.

## MTL\_UNITS\_OF\_MEASURE\_TL

MTL\_UNITS\_OF\_MEASURE\_TL is the definition table for both the 25-character and the 3-character units of measure. The base\_uom\_flag indicates if the unit of measure is the primary unit of measure for the uom\_class. Oracle Inventory uses this table to keep track of the units of measure used to transact an item. This table is also used by Oracle Purchasing, Oracle Order Management and Oracle Shipping Execution.

## MTL\_UNIT\_TRANSACTIONS

MTL\_UNIT\_TRANSACTIONS stores a record of every material transaction of a serialized unit in Inventory. Records are inserted into this table through the transaction processor.

Many serial numbers may be specified for a given transaction record. TRANSACTION\_ID joins to MTL\_MATERIAL\_TRANSACTIONS.TRANSACTION\_ID when only under serial control. TRANSACTION\_ID joins to MTL\_TRANSACTION\_LOT\_NUMBERS.SERIAL\_TRANSACTION\_ID when also under lot control.

## MTL\_UOM\_CONVERSIONS

MTL\_UOM\_CONVERSIONS stores conversion rates between non-base units of measure and their base unit. The non-base units of measure are stored in the table.

The default\_conversion\_flag indicates that the conversion being defined is 1) associated with a specific item and 2) the conversion between units of measure has already been defined as a standard conversion with the same conversion rate.

## ORG\_ACCT\_PERIODS

ORG\_ACCT\_PERIODS holds the open and closed financial periods for organizations. When a period is opened, the period open form (INVTGPO) pulls in the next available period from the GL table GL\_PERIODS. ORG\_ACCT\_PERIODS holds the relevant data, such as period start, end and close dates. Note that only postable periods will be brought over. You may create non-postable periods in Oracle General Ledger or in the GL forms provided with Oracle Inventory. If data exists in the PERIOD\_CLOSE\_DATE column, then the period has been closed and no more transactions can be made against the closed period. The combination of the PERIOD\_CLOSE\_DATE and OPEN\_FLAG columns reflects the status of a period. When OPEN\_FLAG = 'P', it means the period close is processing. When it equals 'N', the period close process is completed. When OPEN\_FLAG is 'Y' and PERIOD\_CLOSE\_DATE is null, it means the period is open. Otherwise, it implies the period close process has failed.

## ORG\_GL\_BATCHES

ORG\_GL\_BATCHES holds history rows for every batch of transactions that have been interfaced to the GL\_INTERFACE table. When you run the GL Transfer or Period Close function, a new row will be inserted into this table, using the next GL\_BATCH\_ID number. This row contains the transfer date and the ACCT\_PERIOD\_ID from ORG\_ACCT\_PERIODS. The GL\_BATCH\_ID column in the accounting transaction tables is updated with this GL\_BATCH\_ID, and this id prevents the accounting transaction from being interfaced twice to the GL\_INTERFACE table. Upon launching the GL Transfer function, the GL\_BATCH\_ID is set to 0 which represents "Processing" status. The GL\_BATCH\_ID is set to a positive number when successfully completed and to a negative number when failure occurs. For Oracle Inventory, the accounting table is MTL\_TRANSACTION\_ACCOUNTS; for Oracle Work In Process, the accounting table is WIP\_TRANSACTION\_ACCOUNTS.

## PJM\_UNIT\_NUMBERS

PJM\_UNIT\_NUMBERS holds unique End Item Model/Unit Numbers for model/unit number effectivity controlled end items. The End Item Model/Unit Number is an alphanumeric string that typically includes a prefix and a number in sequence; for example, FAN-0001. The unit numbers defined for end items must be unique across organizations and across items. This table corresponds to the Maintain Model/Unit Numbers window.

## PO\_DISTRIBUTIONS\_ALL

PO\_DISTRIBUTIONS\_ALL contains accounting distribution information for a purchase order shipment line. You need one row for each distribution line you attach to a purchase order shipment. There are four types of documents using distributions in Oracle Purchasing:

- Standard Purchase Orders
- Planned Purchase Orders
- Planned Purchase Order Releases
- Blanket Purchase Order Releases

Each row includes the destination type, requestor ID, quantity ordered and deliver-to location for the distribution.

Oracle Purchasing uses this information to record accounting and requisition information for purchase orders and releases.

PO\_DISTRIBUTIONS\_ALL is one of five tables storing purchase order and release information.

Some columns in PO\_DISTRIBUTIONS\_ALL contain information only if certain conditions exist:

- If you autocreate this accounting distribution from a requisition, REQ\_DISTRIBUTION\_ID corresponds to the ID of the requisition distribution you copy on the purchase order.
- If you use a foreign currency on your purchase order, Oracle Purchasing stores currency conversion information in RATE and RATE\_DATE.

- If you use encumbrance, GL\_ENCUMBERED\_DATE and GL\_ENCUMBERED\_PERIOD\_NAME contain encumbrance information Oracle Purchasing uses to create journal entries in Oracle General Ledger.
- If you do not autcreate the purchase order from online requisitions, REQ\_LINE\_REFERENCE\_NUM and REQ\_HEADER\_REFERENCE\_NUM contain the requisition number and requisition line number of the corresponding paper requisition. These two columns are not foreign keys to another table.
- If the distribution corresponds to a blanket purchase order release, PO\_RELEASE\_ID identifies this release.
- If SOURCE\_DISTRIBUTION\_ID has a value, the distribution is part of a planned purchase order release.
- If you cancel the distribution, Oracle Purchasing automatically updates QUANTITY\_CANCELLED or GL\_CANCELLED\_DATE. Oracle Purchasing also enters UNENCUMBERED\_AMOUNT if you use encumbrance.

You enter distribution information in the Distributions window, accessible through the Purchase Orders and Releases windows.

## Database Triggers

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

Trigger Name : PO\_MRC\_DISTRIBUTIONS\_BIUD  
Trigger Time : BEFORE  
Trigger Level : ROW  
Trigger Event : INSERT, UPDATE, DELETE

This MRC trigger only exists when you install the Multiple Reporting Currencies feature. It is executed when you perform an insert, update, or delete statement on the table PO\_DISTRIBUTIONS\_ALL. For each record being inserted/updated/deleted in PO\_DISTRIBUTIONS\_ALL, this trigger inserts/updates/deletes corresponding reporting currency records in the MRC subtable, PO\_MC\_DISTRIBUTIONS. In addition, this trigger also populates the MRC VARCHAR2 columns in PO\_DISTRIBUTIONS\_ALL.

---

## PO\_HEADERS\_ALL

PO\_HEADERS\_ALL contains header information for your purchasing documents. You need one row for each document you create. There are six types of documents that use PO\_HEADERS\_ALL:

- RFQs
- Quotations
- Standard purchase orders
- Planned purchase orders
- Blanket purchase orders
- Contracts

Each row contains buyer information, supplier information, brief notes, foreign currency information, terms and conditions information, and the status of the document.

Oracle Purchasing uses this information to record information that is related to a complete document.

PO\_HEADER\_ID is the unique system-generated primary key and is invisible to the user. SEGMENT1 is the system-assigned number you use to identify the document in forms and reports. Oracle Purchasing generates SEGMENT1 using the PO\_UNIQUE\_IDENTIFIER\_CONT\_ALL table if you choose to let Oracle Purchasing generate document numbers for you. SEGMENT1 is not unique for the entire table. Different document types can share the same numbers. You can uniquely identify a row in PO\_HEADERS\_ALL using SEGMENT1 and TYPE\_LOOKUP\_CODE or using

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

## PO\_HEADER\_ID.

If APPROVED\_FLAG is 'Y', the purchase order is approved. If your document type is a blanket purchase order, contract purchase order, RFQ, or quotation, Oracle Purchasing uses START\_DATE and END\_DATE to store the valid date range for the document. Oracle Purchasing only uses BLANKET\_TOTAL\_AMOUNT for blanket purchase orders or contract purchase orders.

If you autcreate a quotation from an RFQ using the Copy Document window, Oracle Purchasing stores the foreign key to your original RFQ in FROM\_HEADER\_ID. Oracle Purchasing also uses FROM\_TYPE\_LOOKUP\_CODE to indicate that you copied the quotation from an RFQ.

Oracle Purchasing does not use SUMMARY\_FLAG and ENABLED\_FLAG. Because future versions of Oracle Purchasing will use them, SUMMARY\_FLAG and ENABLED\_FLAG should always be 'N' and 'Y' respectively.

You enter document header information in the Header region of the Purchase Orders, RFQs, and Quotations windows.

## *Database Triggers*

Trigger Name : PO\_MRC\_HEADERS\_BIUD  
Trigger Time : BEFORE  
Trigger Level : ROW  
Trigger Event : INSERT, UPDATE, DELETE

This MRC trigger only exists when you install the Multiple Reporting Currencies feature. It is executed when you perform an insert, update, or delete statement on the table PO\_HEADERS\_ALL. For each record being inserted/updated/deleted in PO\_HEADERS\_ALL, this trigger inserts/updates/deletes corresponding reporting currency records in the MRC subtable, PO\_MC\_HEADERS. In addition, this trigger also populates the MRC VARCHAR2 columns in PO\_HEADERS\_ALL.

# PO\_LINES\_ALL

PO\_LINES\_ALL stores current information about each purchase order line. You need one row for each line you attach to a document. There are five document types that use lines:

- RFQs
- Quotations
- Standard purchase orders
- Blanket purchase orders
- Planned purchase orders

Each row includes the line number, the item number and category, unit, price, tax information, matching information, and quantity ordered for the line. Oracle Purchasing uses this information to record and update item and price information for purchase orders, quotations, and RFQs.

PO\_LINE\_ID is the unique system-generated line number invisible to the user. LINE\_NUM is the number of the line on the purchase order. Oracle Purchasing uses CONTRACT\_NUM to reference a contract purchase order from a standard purchase order line. Oracle Purchasing uses ALLOW\_PRICE\_OVERRIDE\_FLAG, COMMITTED\_AMOUNT, QUANTITY\_COMMITTED, MIN\_RELEASE\_AMOUNT only for blanket and planned purchase order lines.

The QUANTITY field stores the total quantity of all purchase order shipment lines (found in PO\_LINE\_LOCATIONS\_ALL).

## PO\_LINE\_LOCATIONS\_ALL

PO\_LINE\_LOCATIONS\_ALL contains information about purchase order shipment schedules and blanket agreement price breaks. You need one row for each schedule or price break you attach to a document line. There are seven types of documents that use shipment schedules:

- RFQs
- Quotations
- Standard purchase orders
- Planned purchase orders
- Planned purchase order releases
- Blanket purchase orders
- Blanket purchase order releases

Each row includes the location, quantity, and dates for each shipment schedule. Oracle Purchasing uses this information to record delivery schedule information for purchase orders, and price break information for blanket purchase orders, quotations and RFQs.

PO\_RELEASE\_ID applies only to blanket purchase order release shipments. PO\_RELEASE\_ID identifies the release on which you placed this shipment.

SOURCE\_SHIPMENT\_ID applies only to planned purchase order

**Oracle Proprietary, Confidential Information--Use Restricted by Contract**

release shipments. It identifies the planned purchase order shipment you chose to release from.

PRICE\_OVERRIDE always equals the purchase order line price for standard purchase order shipments. For blanket and planned purchase orders, PRICE\_OVERRIDE depends on the values of the ALLOW\_PRICE\_OVERRIDE\_FLAG and NOT\_TO\_EXCEED\_PRICE in the corresponding row in PO\_LINES\_ALL:

- If ALLOW\_PRICE\_OVERRIDE\_FLAG is 'N', then PRICE\_OVERRIDE equals UNIT\_PRICE in PO\_LINES\_ALL.
- If ALLOW\_PRICE\_OVERRIDE\_FLAG is 'Y', the PRICE\_OVERRIDE can take any value that is smaller than NOT\_TO\_EXCEED\_PRICE in PO\_LINES\_ALL.

The QUANTITY field corresponds to the total quantity ordered on all purchase order distribution lines (found in PO\_DISTRIBUTIONS\_ALL).

Oracle Purchasing automatically updates QUANTITY\_RECEIVED, QUANTITY\_ACCEPTED, and QUANTITY\_REJECTED when you receive, return, or inspect goods or services. Oracle Payables automatically updates QUANTITY\_BILLED when you match an invoice with a purchase order shipment. Oracle Purchasing automatically updates QUANTITY\_CANCELLED when you cancel a purchase order shipment.

Oracle Purchasing sets APPROVED\_FLAG to 'Y' when you approve the corresponding purchase order if there are no problems associated with the shipment and its related distributions.

Oracle Purchasing sets ENCUMBERED\_FLAG to 'Y' and enters the ENCUMBERED\_DATE when you approve a purchase order if you use encumbrance.

## PO\_REQUISITIONS\_INTERFACE\_ALL

PO\_REQUISITIONS\_INTERFACE\_ALL contains requisition information from other applications. Each row includes all the information necessary to create approved or unapproved requisitions in Oracle Purchasing. The Oracle Purchasing Requisition Import feature uses this information to create new requisition headers, lines and distributions.

You use the Submit Request window to launch the Requisition Import program for any set of rows. You identify the set of rows you want to import by setting the INTERFACE\_SOURCE\_CODE and BATCH\_ID columns appropriately in the interface table.

The Requisition Import program validates your data, derives or defaults additional information and writes an error message for every validation that fails into the PO\_INTERFACE\_ERRORS table. Then the program groups and numbers requisition lines according to the criteria you specify in the GROUP\_CODE and REQ\_NUMBER\_SEGMENT1 columns, and creates new requisitions.

Most of the columns in the PO\_REQUISITIONS\_INTERFACE\_ALL table are identical to the corresponding columns in the PO\_REQUISITIONS\_HEADERS\_ALL, PO\_REQUISITION\_LINES\_ALL and PO\_REQ\_DISTRIBUTIONS\_ALL tables. You can additionally enter reference information in the INTERFACE\_SOURCE\_LINE\_ID column.

## PO\_REQUISITION\_LINES\_ALL

PO\_REQUISITION\_LINES stores information about requisition lines. You need one row for each requisition line you create. Each row contains the line number, item number, item category, item description, need-by date, deliver-to location, item quantities, units, prices, requestor, notes, and suggested supplier information for the requisition line.

LINE\_LOCATION\_ID identifies the purchase order shipment line on which you placed the requisition. LINE\_LOCATION\_ID is null if you have not placed the requisition line on a purchase order. BLANKET\_PO\_HEADER\_ID and BLANKET\_PO\_LINE\_NUM store the suggested blanket purchase agreement or catalog quotation line information for the requisition line. PARENT\_REQ\_LINE\_ID contains the REQUISITION\_LINE\_ID from the original requisition line if you exploded or multisourced this requisition line.

PO\_REQUISITION\_LINES is one of three tables storing requisition information. This table corresponds to the Lines region of the Requisitions window.

### Database Triggers

Trigger Name : JL\_BR\_PO\_IMPORT\_REQUISITIONS  
 Trigger Time : BEFORE  
 Trigger Level : ROW  
 Trigger Event : INSERT

This trigger is executed on insert of a row in PO\_REQUISITION\_LINES\_ALL when TRANSACTION\_REASON\_CODE is null. TRANSACTION\_REASON\_CODE is populated from the inventory item, if available, or from PO\_SYSTEM\_PARAMETERS. This is done only if the country is Brazil (country\_code = 'BR') and the Latin America Localizations for Brazil (product\_code = 'JL') is installed. For Brazilian PO localizations, TRANSACTION\_REASON\_CODE is a required field. In all other cases, this trigger does nothing. new.transaction\_reason\_code is null

## PO\_VENDORS

PO\_VENDORS stores information about your suppliers. You need one row for each supplier you define. Each row includes the supplier name as well as purchasing, receiving, payment, accounting, tax, classification, and general information. Oracle Purchasing uses this information to determine active suppliers. VENDOR\_ID is the unique system-generated receipt header number invisible to the user. SEGMENT1 is the system-generated or manually assigned number you use to identify the supplier in forms and reports. Oracle Purchasing generates SEGMENT1 using the PO\_UNIQUE\_IDENTIFIER\_CONTROL table if you choose to let Oracle Purchasing generate supplier numbers for you. This table is one of three tables that store supplier information. PO\_VENDORS corresponds to the Suppliers window.

## RCV\_TRANSACTIONS

RCV\_TRANSACTIONS stores historical information about receiving transactions that you have performed. When you enter a receiving transaction and the receiving transaction processor processes your transaction, the transaction is recorded in this table.

Once a row has been inserted into this table, it will never be updated. When you correct a transaction, the net transaction quantity is maintained in RCV\_SUPPLY. The original transaction quantity does not get updated. You can only delete rows from this table using the Purge feature of Oracle Purchasing.

 AND NEW.destination\_type\_code != 'EXPENSE' This trigger captures accounting events  
 information for the Global Accounting Engine when Oracle Inventory and the set of books used  
 is defined as a subledger in the Global Accounting Engine application The information  
 is used to create Global Accounting Engine accounting events. This trigger may populate  
 the AX\_EVENTS table.

This trigger captures accounting events  
 related to Oracle Purchasing receiving transactions created by the transaction  
 processor. It executes when the transaction type is 'RECEIVE', 'CORRECT', or 'RETURN TO  
 VENDOR', and the source document code is not 'INVENTORY' and the destination type  
 code is not 'EXPENSE' or 'INVENTORY'. Purpose: Capture  
 accounting events related to a PO receiving transaction when it is created

Trigger Name : RCV\_MRC\_TRANSACTIONS\_BIUD  
 Trigger Time : BEFORE  
 Trigger Level : ROW  
 Trigger Event : INSERT, UPDATE, DELETE

This MRC trigger only exists when you install the Multiple Reporting Currencies feature. It is  
 executed when you perform an insert, update, or delete statement on the table RCV\_TRANSACTIONS.  
 For each record being inserted/updated/deleted in RCV\_TRANSACTIONS, this trigger  
 inserts/updates/deletes corresponding reporting currency records in the MRC subtable,  
 RCV\_MC\_TRANSACTIONS. In addition, this trigger also populates the MRC VARCHAR2 columns in  
 RCV\_TRANSACTIONS.

## WIP\_ACCOUNTING\_CLASSES

WIP\_ACCOUNTING\_CLASSES stores accounting flexfield information for standard discrete jobs, non-standard asset jobs, non-standard expense jobs, and repetitive assemblies. Oracle Work in Process stores a General Ledger account for each cost element associated with a class. The CLASS\_CODE column uniquely identifies each class. Oracle Work in Process uses this information to create the journal entries that post cost transactions.

## WIP\_COST\_TXN\_INTERFACE

WIP\_COST\_TXN\_INTERFACE contains information about cost transactions that Oracle Work in Process needs to process. Each row represents either a resource transaction, an overhead transaction, an outside processing transaction, a cost update transaction, a period close variance transaction, or a job close variance transaction. Each row contains the transaction date, the job or repetitive schedule to charge, the resource to charge, the primary unit of measure transaction quantity, and the actual unit of measure transaction quantity. Each row also has foreign key references to move and receiving transaction tables. Oracle Work in Process uses this table to support all resource cost transactions including transactions loaded from other systems through the Oracle Work in Process Open Resource Transaction Interface.

## WIP\_DISCRETE\_JOBS

WIP\_DISCRETE\_JOBS stores discrete job information. Each row represents a discrete job, and contains information about the assembly being built, the revision of the assembly, the job quantity, the status of the job, the material control method, accounting information, and job schedule dates. Oracle Work in Process uses this information to control discrete production.

## Database Triggers

Trigger Name : WIP\_DISCRETE\_JOBS\_T5  
 Trigger Time : BEFORE  
 Trigger Level : ROW  
 Trigger Event : UPDATE

WIP\_DISCRETE\_JOBS\_T5 calls PJM\_PROJECT\_LOCATOR.GET\_JOB\_PROJECTSUPPLY in order to update the locator for the project, if any, that is associated with the job being updated.

Trigger Name : WIP\_DISCRETE\_JOBS\_BRU  
 Trigger Time : BEFORE  
 Trigger Level : ROW  
 Trigger Event : UPDATE

WIP\_DISCRETE\_JOBS\_BRU calls the procedure WIP\_MRP\_RELIEF.WIP\_DISCRETE\_JOBS\_PROC if the status\_type of the job is (or was) < 7 and the job is a standard discrete job. This procedure inserts rows into the table MRP\_RELIEF\_INTERFACE to do MPS relief.

Trigger Name : WIP\_DISCRETE\_JOBS\_BRD  
 Trigger Time : BEFORE  
 Trigger Level : ROW  
 Trigger Event : DELETE

WIP\_DISCRETE\_JOBS\_BRD calls the procedure WIP\_MRP\_RELIEF.WIP\_DISCRETE\_JOBS\_PROC if the status\_type of the job was < 7 and the job is a standard discrete job. This procedure inserts rows into the table MRP\_RELIEF\_INTERFACE to do MPS relief.

Trigger Name : WIP\_DISCRETE\_JOBS\_T4  
Trigger Time : BEFORE  
Trigger Level : ROW  
Trigger Event : INSERT

WIP\_DISCRETE\_JOBS\_T4 calls PJM\_PROJECT\_LOCATOR.GET\_JOB\_PROJECTSUPPLY in order to find a locator for the project, if any, that is associated with the job being created.

## WIP\_DJ\_CLOSE\_TEMP

WIP\_DJ\_CLOSE\_TEMP is a temporary table that holds information for discrete jobs that have a status of Pending Close. Oracle Work in Process inserts records into this table from the Close Discrete Jobs window and also the Discrete Job Close process. Records are deleted from this table once jobs are closed.

## WIP\_EMPLOYEE\_LABOR\_RATES

WIP\_EMPLOYEE\_LABOR\_RATES stores information about employee labor rates. Each row represents an employee's hourly labor rate as of a certain effective date. This information is used when you charge a resource at an actual labor rate rather than the standard cost of the resource. Information is entered into this table using the Employee Labor Rates window.

WIP\_FLOW\_SCHEDULES\_ARD deletes a corresponding row in WIP\_ENTITIES.

## WIP\_INDICATORS\_TEMP

WIP\_INDICATORS\_TEMP is the temporary table that is used to calculate production indicators, such as productivity, utilization, and yield, from transaction information. The table is used as a transient table by the Capture Production Indicators concurrent program for a given date range.

### Column Descriptions

Name	Null?	Type	Description
GROUP_ID	NOT NULL	NUMBER	Identifies the set of records created for and used by a particular report instance

# WIP\_INTERFACE\_ERRORS

WIP\_INTERFACE\_ERRORS stores the text of errors or warnings issued when loading information through the WIP Scheduling and Open Job and Schedule interfaces. It also stores information about the load requests that generate the errors. When the WIP Mass Load program loads records from the WIP Scheduling Interface, you can print a report showing these errors.

Column Descriptions

Name	Null?	Type	Description
INTERFACE_ID	NOT NULL	NUMBER	Uniquely identifies the request that produced the error
ERROR_TYPE	NOT NULL	NUMBER	Type of error

## WIP\_JOB\_DTLS\_INTERFACE

WIP\_JOB\_DTLS\_INTERFACE contains requests to add, delete, and modify material, resource, resource usage, and scheduling requirements for new or existing Discrete jobs. Third party Applications products place requests in this table in order to load material and resource requirement information into WIP. The API WIP\_JOB\_DETAILS.Load\_Job\_Details processes data in the table and loads them into WIP.

## WIP\_JOB\_SCHEDULE\_INTERFACE

WIP\_JOB\_SCHEDULE\_INTERFACE contains requests to create or modify Discrete jobs or to create pending Repetitive schedules. Several non-WIP Oracle Applications products place requests in this table in order to load job and schedule information into WIP. You can use this table to load data into WIP from external sources by following the guidelines laid out in the Oracle Work in Process Work Order Interface documentation. The concurrent program WICMLX processes rows in this table.

## WIP\_LINES

WIP\_LINES stores production line information. Each row includes a line name, maximum and minimum rate information, throughput for rate based lines (lead time), and the start and stop time information that determines the amount of time per day that the line is available. Oracle Work in Process uses this information when you associate a line with a repetitive assembly and when you define a repetitive schedule on the line. Production line information is optional for discrete jobs.

## WIP\_MOVE\_TRANSACTIONS

WIP\_MOVE\_TRANSACTIONS stores information about shop floor Move transactions. Each row represents a single Move transaction and includes a unique transaction identifier, the transaction date, the job or repetitive schedule in which the Move occurs, the Move quantity, as well as information about the From and To operation sequence numbers, operation codes, and intraoperation steps. Oracle Work in Process uses this information to track Move transactions.

## WIP\_MOVE\_TXN\_ALLOCATIONS

WIP\_MOVE\_TXN\_ALLOCATIONS stores Move quantity information for single shop floor Move transactions that transcend multiple repetitive schedules. Oracle Work in Process creates a row for each repetitive schedule it transacts along with the Move transaction identifier from WIP\_MOVE\_TRANSACTIONS and the primary and alternate units of measure quantities. Oracle Work in Process allocates shop floor Move quantities to repetitive schedules based on a FIFO algorithm, which records quantities against the oldest schedule first.

## WIP\_MOVE\_TXN\_INTERFACE

WIP\_MOVE\_TXN\_INTERFACE contains information about the shop floor Move transactions that need to be processed. Each row contains the transaction date, the job or repetitive schedule in which you are moving assemblies, the primary unit of measure, the actual unit of measure transaction quantities, the foreign keys necessary for WIP to process the Move transaction as well as information about the From and To operation sequence numbers, operation codes, and intraoperation steps. This table supports all shop floor Move transactions including transactions loaded from other systems, such as bar code readers, using the Oracle Work in Process Open Move Transaction Interface.

## WIP\_OPERATIONS

WIP\_OPERATIONS stores information about job and repetitive schedule operations. Each row represents a specific operation and includes an operation sequence number, which orders the operations for the job or repetitive schedule. Each row also includes the assembly quantity completed at an operation, the quantity at each intraoperation step, the department associated with an operation, the scheduled start and completion dates for an operation, the operation's count point and backflush types and other operation attributes. In general, Oracle Work in Process uses this information to control and monitor assembly production on the shop floor.

## WIP\_OPERATION\_OVERHEADS

WIP\_OPERATION\_OVERHEADS stores information about resource-based and departmental overhead costs for jobs in an average costing organization. For departmental overheads, each row represents overhead costs earned by and relieved from a job at each operation and that have a resource sequence number of -1. For resource based overheads, each row represents overhead costs earned by and relieved from a job for each resource and operation.

## WIP\_OPERATION\_RESOURCES

WIP\_OPERATION\_RESOURCES stores information about the resource requirements associated with job and repetitive schedule operations. Each row represents a resource requirement and contains a sequence number, the resource's unit of measure, its usage rate or amount, and several other attributes that control how it is scheduled and costed. Oracle Work in Process uses this information to schedule jobs and repetitive schedules and to charge resources to jobs and schedules.

## WIP\_OPERATION\_RESOURCE\_USAGE

WIP\_OPERATION\_RESOURCE\_USAGE stores information about the use of resources associated with job and repetitive schedule operations. Each row represents a resource usage in a valid shift for that particular resource. It also contains the assigned units in each of these shifts. Oracle Manufacturing Scheduling uses this information to schedule discrete jobs.

## WIP\_PAC\_ACTUAL\_COST\_DETAILS

Stores the actual cost of WIP transactions for each WIP entity in a cost group by period. Applicable transactions are resource, overhead, outside processing and job close. **COST\_ELEMENT\_ID** indicates the cost element involved in the transaction for resource, outside processing, or overhead. **BASIS\_RESOURCE\_ID** is populated for resource-based overhead charges and indicates the resource ID associated with the overhead charged. **BASIS\_UNITS** is also applicable only to resource-based overhead charges and indicates the units (value or quantity) of the basis resource that was used as the charge factor. **LEVEL\_TYPE** is the current level for all transactions other than job close transactions.

## WIP\_PAC\_PERIOD\_BALANCES

Stores the WIP balances for all entities within a cost group by period. Values are stored by WIP\_ENTITY\_ID, LINE\_ID and OPERATION\_SEQ\_NUM. The IN columns represent value charged to the entity by material issues, resource charges or overhead charges. The OUT columns represent the value relieved from the entity by scrap or completions. The VAR columns usually represent the difference between IN and OUT columns and are updated during period close for repetitive schedules and during job close for discrete jobs. For repetitive schedules, the values are stored at the repetitive line level by aggregating the charges by operation for every schedule.

OPERATION\_COMPLETED\_UNITS represents the quantity of assembly units that have moved past an operation.

RELIEVED\_ASSEMBLY\_UNITS represent the quantity of assembly units that are relieved from the operation due to completion or scrap.

## WIP\_PERIOD\_BALANCES

WIP\_PERIOD\_BALANCES stores summary accounting information for jobs and schedules. Each row represents job or schedule charges within a given accounting period, and contains the summary values for each cost element. Oracle Work in Process uses this information to report job and schedule values and to calculate job and period variances.

## WIP\_REPETITIVE\_ITEMS

WIP\_REPETITIVE\_ITEMS stores information about repetitive assemblies and the production lines on which they are built. Each row represents a particular assembly and line combination, and includes information such as the line priority, the accounting class associated with the line, the production rate, the supply type of the line, whether the line is used in calculating the assembly's lead time (PRIMARY\_LINE\_FLAG), the completion subinventory and locator for a line, and the alternate bill and/or routing used for a particular line. Oracle Work in Process uses this information when you define repetitive schedules. Oracle Master Scheduling/MRP and Oracle Supply Chain Planning, as well as Oracle Capacity, use this information when mass loading repetitive schedules and running capacity loads on repetitive schedules.

## WIP\_REPETITIVE\_SCHEDULES

WIP\_REPETITIVE\_SCHEDULES stores repetitive schedule information. Each row includes a repetitive schedule Identifier, information about the schedule's production line, start and end dates, rate, throughput, revision, status, and information on the General Ledger accounts to which charges for this schedule are written. Oracle Work in Process uses this information to control repetitive production.

## WIP\_REQUIREMENT\_OPERATIONS

WIP\_REQUIREMENT\_OPERATIONS stores information about the material requirements of jobs and schedules. Each row represents a material requirement and contains information about the component item, its usage quantities, the using department, requirement date, and the material control method. Oracle Work in Process uses this information to track the material usage of jobs and schedules.

## WIP\_REQ\_OPERATION\_COST\_DETAILS

WIP\_REQ\_OPERATION\_COST\_DETAILS stores material costs earned by and relieved from a job in an average costing organization. This table is a child table of WIP\_REQUIREMENT\_OPERATIONS. This table stores applied and relieved material costs by cost element for each row in WIP\_REQUIREMENT\_OPERATIONS.

## WIP\_SCRAP\_VALUES

WIP\_SCRAP\_VALUES stores assembly scrap transaction cost information for jobs and schedules. Oracle Work in Process calculates this information as part of scrap transaction processing and inserts the values in this table. Oracle Work in Process updates these values as necessary when you perform cost updates. This table is also used when printing scrap transaction information on the Discrete Job and Repetitive Schedule Value reports.

## WIP\_SHOP\_FLOOR\_STATUSES

WIP\_SHOP\_FLOOR\_STATUSES stores the status codes that you assign to a discrete job or repetitive schedule. Each row contains the operation sequence number and intraoperation step to which you assign the status. Oracle Work in Process uses this information to determine which operations and intraoperation steps you assigned statuses to in a job or repetitive schedule.

## WIP\_SHOP\_FLOOR\_STATUS\_CODES

WIP\_SHOP\_FLOOR\_STATUS\_CODES stores the status codes and descriptions defined in the Shop Floor Statuses window in Oracle Work in Process. Each row contains information such as the status name, description, and whether the status prevents you from moving assemblies out of an operation and interoperation step to which you assign the status.

## WIP\_TRANSACTIONS

WIP\_TRANSACTIONS stores information about WIP resource transactions. Each row represents a single resource transaction and includes a unique transaction Identifier, a transaction date, the job or repetitive schedule charged, the WIP operation and resource charges, and the number of units of measure applied. Oracle Work in Process uses this information to track resource charges and to calculate the values stored in WIP\_TRANSACTION\_ACCOUNTS.

#### *Database Triggers*

Trigger Name : AX\_WIP\_TRANSACTIONS\_ARI1  
Trigger Time : AFTER  
Trigger Level : ROW  
Trigger Event : INSERT

This trigger captures information needed to create subledger accounting events when Oracle Inventory and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger captures accounting events related to WIP resource transactions. It executes when an outside resource transaction is created and the source is from a receiving system. It populates the AX\_EVENTS table.

## WIP\_TRANSACTION\_ACCOUNTS

WIP\_TRANSACTION\_ACCOUNTS stores the accounting information for each resource transaction in WIP\_TRANSACTIONS. These two tables are joined by the column TRANSACTION\_ID, and contain at least two account rows for every resource transaction (unless the resource is not costed). Each row represents a debit or a credit accounting entry, and the sum of all rows for a given transaction Identifier should be zero. Each row includes the account, transaction date, transaction value, purpose (ACCOUNTING\_LINE\_TYPE), and the source of the charges (the job or repetitive schedule). The TRANSACTION\_VALUE and BASE\_TRANSACTION\_VALUE are transferred to the GL\_INTERFACE table through the period close or GL transfer (INTCGL) process. Until this process is run, the GL\_BATCH\_ID is set to -1. Oracle Work in Process uses the information in this table to track the financial impact of resource transactions.

## WIP\_TXN\_ALLOCATIONS

WIP\_TXN\_ALLOCATIONS stores resource transaction information for single resource cost transactions that transcend multiple repetitive schedules. Oracle Work in Process creates a row for each repetitive schedule it charges, along with the transaction Identifier from WIP\_TRANSACTIONS and the primary and alternate unit of measure quantities. Oracle Work in Process allocates resource charges to repetitive schedules based on a FIFO algorithm that charges the oldest schedule first.

## WIP\_TXN\_INTERFACE\_ERRORS

WIP\_TXN\_INTERFACE\_ERRORS contains information about errors encountered when Oracle Work in Process validates transaction information in the WIP\_COST\_TXN\_INTERFACE and WIP\_MOVE\_TXN\_INTERFACE tables. A single transaction can result in the creation of multiple error records. Each record contains the transaction Identifier, the message name, and the name of the column containing the error.

## WIP\_VALID\_INTRAOPERATION\_STEPS

WIP\_VALID\_INTRAOPERATION\_STEPS stores information about enabled intraoperation steps (Queue, Run, To move, Reject, and Scrap). Each enabled intraoperation step requires a row. Since the Queue intraoperation step is automatically enabled for all operations, there is always at least one row in this table. The value SYSTEM appears in the column RECORD\_CREATOR for the Queue step. User enabled intraoperation steps have the value USER. Oracle Work in Process uses this information to determine whether assemblies can be moved into or out of a particular intraoperation step.
