This Technical Reference Manual (TRM) in any form, software or printed matter, contains proprietary information of Oracle Corporation; it is provided under an Oracle Corporation agreement containing restrictions on use and disclosure and is also protected by copyright, patent, and other intellectual property law. Restrictions applicable to this TRM include, but are not limited to: (a) exercising either the same degree of care to safeguard the confidentiality of this TRM as you exercise to safeguard the confidentiality of your own most important Confidential Information or a reasonable degree of care, whichever is greater; (b) maintaining agreements with your employees and agents that protect the Confidential Information of third parties such as Oracle Corporation and instructing such employees and agents of these requirements for this TRM; (c) restricting disclosure of this TRM to those of your employees who have a "need to know" consistent with the purposes for which this TRM was disclosed to you; (d) maintaining this TRM at all times on your premises; (e) not removing or destroying any proprietary or confidential legends or markings placed upon this TRM in whatever form, software or printed matter; and (f) not reproducing or transmitting this TRM in any form or by any means, electronic or mechanical, for any purpose, without the express written permission of Oracle Corporation. You should not use this TRM in any form, software or printed matter, to create software that performs the same or similar functions as any Oracle Corporation products.

The information in this TRM is subject to change without notice. If you find any problems in the TRM in any form, software or printed matter, please report them to us in writing. Oracle Corporation does not warrant that this TRM is error-free. This TRM is provided to customer "as-is" with no warranty of any kind. This TRM does not constitute Documentation as that term is defined in Oracle's agreements.

Reverse engineering of the Programs (software and documentation) associated with this TRM are prohibited. The Programs associated with this TRM are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be licensee's responsibility to take all appropriate fail–safe, back–up, redundancy and other measures to ensure the safe use of such applications if the Programs are used for such purposes, and Oracle disclaims liability for any damages caused by such use of the Programs.

#### Restricted Rights Legend

This TRM and the Programs associated with this TRM delivered subject to the DOD FAR Supplement are 'commercial computer software' and use, duplication and disclosure of the TRM and the Programs associated with this TRM shall be subject to the licensing restrictions set forth in the applicable Oracle license agreement. Otherwise, this TRM and the Programs associated with this TRM delivered subject to the Federal Acquisition Regulations are 'restricted computer software' and use, duplication and disclosure of the TRM and the Programs associated with this TRM shall be subject to the restrictions in FAR 52.227–14, Rights in Data — General, including Alternate III (June 1987). # Introduction

he *Oracle Purchasing Applications Technical Reference Manual* provides the information you need to understand the underlying structure of Oracle Purchasing and Oracle Public Sector Purchasing. After reading this manual, you should be able to convert your existing applications data, integrate your existing applications with your Oracle Purchasing application, and write custom reports for your Oracle Purchasing application, as well as read data that you need to perform other tasks.

This chapter introduces you to the *Oracle Purchasing Applications Technical Reference Manual*, and explains how to use it.

## Introduction

At Oracle, we design and build applications using Oracle Designer, our systems design technology that provides a complete environment to support developers through all stages of a systems life cycle. Because we use a repository–based design toolset, all the information regarding the underlying structure and processing of our applications is available to us online. Using Oracle Designer, we can present this information to you in the form of a technical reference manual.

This Oracle Purchasing Applications Technical Reference Manual contains detailed, up-to-date information about the underlying structure of Oracle Purchasing and Oracle Public Sector Purchasing. As we design and build new releases of Oracle Purchasing applications, we update our Oracle Designer repository to reflect our enhancements. As a result, we can always provide you with an Oracle Purchasing Applications Technical Reference Manual that contains the latest technical information as of the publication date. Note that after the publication date we may have added new indexes to Oracle Purchasing and Oracle Public Sector Purchasing to improve performance.

#### **About this Manual**

This manual describes the Oracle Applications Release 11*i* data model, as used by Oracle Purchasing; it discusses the database we include with a fresh install of Oracle Applications Release 11*i*. If you have not yet upgraded to Release 11, your database may differ from the database we document in this book.

If you have upgraded from a previous release, you might find it helpful to use this manual with the appropriate *Oracle Applications Product Update Notes* manual. The product update notes list database changes and seed data changes in Oracle Purchasing and Oracle Public Sector Purchasing between releases. The *Oracle Applications Product Update Notes Release 11* manual describes the changes between release 10.7 and release 11, and the *Oracle Applications Product Update Notes Release 11i* manual describes the changes between release 11 and release 11i.

You can contact your Oracle representative to confirm that you have the latest technical information for Oracle Purchasing. You can also use Oracle MetaLink which is accessible through Oracle's Support Web Center (http://www.oracle.com/support/elec\_sup).

## **Finding the Latest Information**

The Oracle Purchasing Applications Technical Reference Manual contains the latest information as of the publication date. For the latest information we encourage you to use OracleMetaLink which is accessible through Oracle's Support Web Center (
<a href="http://www.oracle.com/support/elec\_sup">http://www.oracle.com/support/elec\_sup</a>).

#### Audience

The Oracle Purchasing Applications Technical Reference Manual provides useful guidance and assistance to:

- Technical End Users
- Consultants
- Systems Analysts
- System Administrators
- Other MIS professionals

This manual assumes that you have a basic understanding of structured analysis and design, and of relational databases. It also assumes that you are familiar with Oracle Application Object Library and your Oracle Purchasing application. If you are not familiar with the above products, we suggest that you attend one or more of the training classes available through Oracle Education (see: Other Information Sources: page 1-8).

## Public Sector and other industry-specific products

For certain products, including Oracle Purchasing, Oracle provides several distinct software versions tailored for a specific industry or vertical, containing additional functionality not present in the base or non-vertical-specific product.

The data model for Oracle Purchasing supports a superset of all the functionality used by a vertical–specific version of Oracle Purchasing, including the Oracle Public Sector Financials version of Oracle Purchasing. Therefore, you can use this manual in conjunction with Oracle Public Sector General Ledger, Oracle Public Sector Payables, Oracle Public Sector Purchasing, or Oracle Public Sector Receivables.

## How This Manual is Organized

This manual contains two major sections, High-Level Design and Detailed Design.

#### **High-Level Design**

This section, Chapter 2, contains database diagrams, and lists each database table and view that Oracle Purchasing uses. This chapter also has a list of modules.

#### **Detailed Design**

This section, Chapter 3, contains a detailed description of the Oracle Purchasing database design, including information about each database table and view you might need for your custom reporting or other data requirements.

#### How to Use This Manual

The *Oracle Purchasing Applications Technical Reference Manual* is a single, centralized source for all the information you need to know about the underlying structure and processing of your Oracle Purchasing application. For example, you can use this manual when you need to:

- Convert existing application data
- Integrate your Oracle Purchasing application with your other applications systems
- Write custom reports
- Define alerts against Oracle Applications tables
- Configure your Oracle Self-Service Web Applications
- Create views for decision support queries using query tools
- Create business views for Oracle Discoverer

You need not read this manual cover to cover. Use the table of contents and index to quickly locate the information you need.

Here is an example of how you might use the *Oracle Purchasing Applications Technical Reference Manual*:

Suppose you are designing a program to load information from your existing system into the Oracle Purchasing suppliers table (PO\_VENDORS). The first step is to examine the database diagram in Chapter 2. Locate the supplier entity in the diagram to determine which other tables include references to suppliers. Once you locate the table PO\_VENDORS, then you should examine the description and columns of that table to ensure that your conversion program uses the correct column names and fills each column with the appropriate type of data. Be sure to examine the descriptions of the related tables as well, to ensure that your conversion maintains database integrity.

#### How Not To Use This Manual

## Do not use this manual to plan modifications

You should not use this manual to plan modifications to your Oracle Purchasing application. Modifying Oracle Purchasing and Oracle Public Sector Purchasing limits your ability to upgrade to future releases of your Oracle Purchasing application. In addition, it

Oracle Proprietary, Confidential Information--Use Restricted by Contract

interferes with our ability to give you the high-quality support you deserve.

We have constructed your Oracle Purchasing application so that you can customize it to fit your needs without programming, and you can integrate it with your existing applications through interface tables. However, should you require program modifications, you should contact our support team (see: Other Information Sources: page 1-8). They can put you in touch with Oracle Services, the professional consulting organization of Oracle. Their team of experienced applications professionals can make the modifications you need while ensuring upward compatibility with future product releases.

#### Do not write data into non-interface tables

Oracle reserves the right to change the structure of Oracle Applications tables, and to change the meaning of, add, or delete lookup codes and data in future releases. Do not write data directly into or change data in non–interface tables using SQL\*Plus or other programming tools because you risk corrupting your database and interfering with our ability to support you.

Moreover, this version of the *Oracle Purchasing Applications Technical Reference Manual* does not contain complete information about the dependencies between Oracle Purchasing applications tables. Therefore, you should write data into only those tables we identify as interface tables. If you write data into other non–interface tables, you risk violating your data integrity since you might not fulfill all the data dependencies in your Oracle Purchasing application.

You are responsible for the support and upgrade of the logic within the procedures that you write, which may be affected by changes between releases of Oracle Applications.

### Do not rely on upward compatibility of the data model

Oracle reserves the right to change the structure of Oracle Purchasing applications tables, and to change the meaning of, add, or delete lookup codes and other data in future releases. We do not guarantee the upward compatibility of the Oracle Purchasing applications data model. For example, if you write a report that identifies concurrent requests that end in Error status by selecting directly from Oracle Application Object Library tables, we do not guarantee that your report will work properly after an upgrade.

#### Oracle Proprietary, Confidential Information-Use Restricted by Contract

1 - 6

## **About Oracle Application Object Library**

The Oracle Purchasing Applications Technical Reference Manual may contain references to tables that belong to Oracle Application Object Library. Oracle Application Object Library is a collection of pre-built application components and facilities for building Oracle Applications and extensions to Oracle Applications. Oracle Application Coding Standards use the Oracle Application Object Library and contains shared components including but not limited to — forms, subroutines, concurrent programs and reports, database tables and objects, messages, menus, responsibilities, flexfield definitions and online help.

**Attention:** Oracle does not support *any* customization of Oracle Application Object Library tables or modules, not even by Oracle consultants. (Oracle Application Object Library tables generally have names beginning with FND\_%.)

Accordingly, this manual does not contain detailed information about most Oracle Application Object Library tables used by your Oracle Purchasing application.

## A Few Words About Terminology

The following list provides you with definitions for terms that we use throughout this manual:

## Relationship

A relationship describes any significant way in which two tables may be associated. For example, rows in the Journal Headers table may have a one-to-many relationship with rows in the Journal Lines table.

## **Database Diagram**

A database diagram is a graphic representation of application tables and the relationships between them.

## **Summary Database Diagram**

A summary database diagram shows the most important application tables and the relationships between them. It omits tables and relationships that contribute little to the understanding of the application data model. Typically, a summary database diagram shows tables that contain key reference and transaction data.

Oracle Proprietary, Confidential Information--Use Restricted by Contract

#### Module

A module is a program or procedure that implements one or more business functions, or parts of a business function, within an application. Modules include forms, concurrent programs and reports, and subroutines.

#### **Application Building Block**

An application building block is a set of tables and modules (forms, reports, and concurrent programs) that implement closely–related database objects and their associated processing. Said another way, an application building block is a logical unit of an application.

#### QuickCodes

QuickCodes let you define general purpose, static lists of values for window fields. QuickCodes allow you to base your program logic on lookup codes while displaying user–friendly names in a list of values window. QuickCodes simplify name and language changes by letting you change the names your end users see, while the codes in your underlying programs remain the same.

#### Form

A form is a module comprised of closely related windows that are used together to perform a task. For example, the Enter Journals form in Oracle General Ledger includes the Enter Journals window, the Batch window, and the More Actions window among others. The Enter Journals window is the main window, and from it, you can use buttons to navigate to other windows in the form. The form name usually corresponds to the main window in the form, and is frequently a window you open directly from the Navigator.

#### **Other Information Sources**

There are additional information sources, including other documentation, training and support services, that you can use to increase your knowledge and understanding of Oracle Designer, Oracle Application Object Library, and your Oracle Purchasing application. We want to make these products easy for you and your staff to understand and use.

#### Oracle Proprietary, Confidential Information-Use Restricted by Contract

#### **Oracle Designer Online Documentation**

The online help for Oracle Designer describes how you can use Oracle Designer for your development needs.

#### Oracle Applications Developer's Guide

This guide contains the coding standards followed by the Oracle Applications development staff. It describes the Oracle Application Object Library components needed to implement the Oracle Applications user interface described in the *Oracle Applications User Interface Standards*. It also provides information to help you build your custom Developer forms so that they integrate with Oracle Applications.

#### Oracle Applications User Interface Standards

This manual contains the user interface (UI) standards followed by the Oracle Applications development staff. It describes the UI for the Oracle Applications products and how to apply this UI to the design of an application built using Oracle Forms 6.

### Oracle Purchasing User Guide Oracle Public Sector Purchasing User Guide

Your user guide provides you with all the information you need to use your Release 11*i* Oracle Purchasing application. Each user guide is organized for fast, easy access to detailed information in a functionand task-oriented organization.

## **Oracle Self-Service Web Applications Online Documentation**

This documentation describes how Oracle Self–Service Web Applications enable companies to provide a self–service and secure Web interface for employees, customers, and suppliers. Employees can change their personal status, submit expense reports, or request supplies. Customers can check on their orders, and suppliers can share production schedules with their trading partners. This documentation is available in HTML only.

## **Oracle Configurator User Guide**

This guide describes how to improve order taking and fulfillment productivity by eliminating errors in new sales orders and bills of materials. You can use Oracle Configurator to verify product

#### Oracle Proprietary, Confidential Information-Use Restricted by Contract

configurations, automatically select configuration options, and generate manufacturing bills of materials according to configuration constraints.

#### **Oracle Applications Flexfields Guide**

This guide provides flexfields planning, setup and reference information for the Oracle Purchasing implementation team, as well as for users responsible for the ongoing maintenance of Oracle Applications product data. This manual also provides information on creating custom reports on flexfields data.

#### **Oracle Workflow Guide**

This manual explains how to define new workflow business processes as well as customize existing Oracle Applications-embedded workflow processes. You also use this guide to complete the setup steps necessary for any Oracle Applications product that includes workflow-enabled processes.

#### **Oracle Alert User Guide**

This manual explains how to define periodic and event alerts to monitor the status of your Oracle Applications data.

### **Multiple Reporting Currencies in Oracle Applications**

If you use the Multiple Reporting Currencies feature to report and maintain accounting records in more than one currency, use this manual before implementing Oracle Purchasing. This manual details additional steps and setup considerations for implementing Oracle Purchasing with this feature.

## Multiple Organizations in Oracle Applications

If you use the Oracle Applications Multiple Organization Support feature to use multiple sets of books for one Oracle Purchasing installation, use this guide to learn about setting up and using Oracle Purchasing with this feature. This book describes the Oracle Applications organization model, which defines business units and the relationships between them in an arbitrarily complex enterprise. Functional and technical overviews of multiple organizations are presented, as well as information about how to set up and implement this feature set in the relevant Oracle Applications products.

# Oracle Manufacturing, Distribution, Sales and Service Open Interfaces Manual

This manual contains up-to-date information about integrating with other Oracle Manufacturing applications and with your other systems. This documentation includes open interfaces found in Oracle Manufacturing.

#### **Oracle Applications Messages Manual**

The Oracle Applications Messages Manual contains the text of numbered error messages in Oracle Applications. (Oracle Applications messages begin with the prefix "APP-".) It also provides information on the actions you take if you get a message. Note: This manual is available only in HTML format.

#### **Oracle Public Sector Financials Messages Manual**

This manual contains the text of numbered error messages in Oracle Public Sector Financials and related Oracle Applications products. (Oracle Applications messages begin with the prefix "APP-".) It also provides information on the actions you take if you get a message. Note: This manual is available only in HTML format.

### **Installation and System Administration**

## **Oracle Applications Installation Release Notes**

This manual contains a road map to the components of the release, including instructions about where to access the Release 11*i* documentation set.

## **Oracle Applications Concepts**

Designed to be the first book the user reads to prepare for an installation of Oracle Applications. It explains the technology stack, architecture, features and terminology for Oracle Applications Release 11*i*. This book also introduces the concepts behind and major uses of Applications—wide features such as MRC, BIS, languages and character sets (NLS, MLS), BIS, Self–Service Web Applications and so on.

#### **Installing Oracle Applications**

Describes the One–Hour Install process, the method by which Release 11*i* will be installed. This manual includes all how–to steps, screen shots and information about Applications–wide post–install tasks.

#### Using the AD Utilities

This manual contains how-to steps, screen shots and other information required to run the various AD utilities such as AutoInstall, AutoPatch, AD Administration, AD Controller, Relink and so on. It also contains information about when and why you should use these utilities.

#### **Upgrading Oracle Applications**

This manual contains all the product specific pre and post-upgrade steps that are required to upgrade products from Release 10.7 (NCA, SC and character-mode) or Release 11 of Oracle Applications. This manual also contains an overview chapter that describes all the tasks necessary to prepare and complete a upgrade of Oracle Applications.

#### Oracle Applications System Administrator's Guide

This manual provides planning and reference information for the Oracle Applications System Administrator. It contains information on how to define security, customize menus and manage concurrent processing.

## **Oracle Applications Product Update Notes**

This book contains a summary of each new feature we added since Release 11, as well as information about database changes and seed data changes that may affect your operations or any custom reports you have written. If you are upgrading from Release 10.7 you also need to read *Oracle Applications Product Update Notes Release 11*.

## Oracle Self-Service Web Applications Implementation Manual

This manual describes the setup steps for Oracle Self–Service Web Applications and the Web Applications Dictionary.

#### **Oracle Applications Implementation Wizard User Guide**

If you are implementing more than one Oracle product, you can use the Oracle Applications Implementation Wizard to coordinate your setup activities. This guide describes how to use the wizard.

#### Other Information

#### **Training**

Oracle Education offers a complete set of training courses to help you and your staff master Oracle Applications. We can help you develop a training plan that provides thorough training for both your project team and your end users. We will work with you to organize courses appropriate to your job or area of responsibility.

Training professionals can show you how to plan your training throughout the implementation process so that the right amount of information is delivered to key people when they need it the most. You can attend courses at any one of our many Educational Centers, or you can arrange for our trainers to teach at your facility. In addition, we can tailor standard courses or develop custom courses to meet your needs.

## **Support**

From on-site support to central support, our team of experienced professionals provides the help and information you need to keep your Oracle Purchasing application working for you. This team includes your Technical Representative, Account Manager, and Oracle's large staff of consultants and support specialists with expertise in your business area, managing an Oracle server, and your hardware and software environment.

#### **About Oracle**

Oracle Corporation develops and markets an integrated line of software products for database management, applications development, decision support, and office automation, as well as Oracle Applications, an integrated suite of more than 75 software modules for financial management, supply chain management, manufacturing, project systems, human resources, and sales and service management.

Oracle products are available for mainframes, minicomputers, personal computers, network computers, and personal digital assistants, allowing organizations to integrate different computers, different operating systems, different networks, and even different database management systems, into a single, unified computing and information resource.

Oracle is the world's leading supplier of software for information management, and the world's second largest software company. Oracle offers its database, tools, and applications products, along with related consulting, education, and support services, in over 145 countries around the world.

#### Thank You

Thanks for using Oracle Purchasing applications and this technical reference manual!

We appreciate your comments and feedback. At the back of this manual is a Reader's Comment Form that you can use to explain what you like or dislike about your Oracle Purchasing application or this technical reference manual. CHAPTER

2

# High-Level Design

his chapter presents a high-level design for Oracle Purchasing and Oracle Public Sector Purchasing that satisfies the business needs we specify during Strategy and Analysis. It contains database diagrams for Oracle Purchasing and Oracle Public Sector Purchasing application building blocks, lists of database tables and views, and a list of modules.

## Overview of High-Level Design

During High–Level Design, we define the application components (tables, views, and modules) we need to build our application. We specify what application components should do without specifying the details of *how* they should do it.

You can refer to this High-Level Design chapter to quickly acquaint yourself with the tables, views, and modules that comprise Oracle Purchasing applications. And, you can prepare yourself to understand the detailed design and implementation of Oracle Purchasing and Oracle Public Sector Purchasing.

## **Summary Database Diagram**

The Summary Database Diagram section graphically represents the most important application tables and the relationships between them. It omits tables and relationships that contribute little to the understanding of the application data model. Typically, a summary database diagram shows tables that contain key reference and transaction data.

We prepare a summary database diagram to describe, at a conceptual level, the key information on which our business depends. Later, we refine this summary database diagram, breaking it into multiple database diagrams (generally, one per application building block) to represent all the tables and relationships we need to implement our application in the database.

Review the Summary Database Diagram section to see at a glance the major tables and relationships on which your Oracle Purchasing application depends.

## **Database Diagrams**

The Database Diagrams section graphically represents all Oracle Purchasing applications tables and the relationships between them, organized by building block.

Use this section to quickly learn what tables each Oracle Purchasing application building block uses, and how those tables interrelate. Then, you can refer to the Table and View Definitions sections of Chapter 3 for more detailed information about each of those tables.

#### Oracle Proprietary, Confidential Information-Use Restricted by Contract

#### **Table Lists**

The Table List sections list the Oracle Purchasing applications tables. Because a product might not include at least one table for each type, this Technical Reference Manual might not include each of the following sections.

#### **Public Tables**

Use the Public Table List section to quickly identify the tables you are most interested in. Then, you can refer to the Table and View Definitions sections of Chapter 3 for more detailed information about those tables.

In addition, this manual may contain full documentation for one or more of the following Application Object Library tables: FND\_DUAL, FND\_CURRENCIES, and FND\_COMMON\_LOOKUPS.

#### **Internal Tables**

This section includes a list of private, internal tables used by Oracle Purchasing; we do not provide additional documentation for these tables.

#### View Lists

The View List sections list the Oracle Purchasing views, with one section for each type of view. Because a product might not include at least one view for each type, this Technical Reference Manual might not include each of the following sections.

Use this section to quickly identify the views you are most interested in. Then, you can refer to the Table and View Definitions sections of Chapter 3 for more detailed information about those views.

#### **Public Views**

This section lists views that may be useful for your custom reporting or other data requirements. The list includes a description of the view, and the page in Chapter 3 that gives detailed information about the public view.

#### Web Views

This section lists views that you may need to configure your Self–Service Web applications. The list includes a description of the view, and the page in Chapter 3 that gives detailed information about the web view.

#### Forms and Table Views

This section lists supplementary views that are not essential to the Release 11i data model, but simplify coding or improve performance for Oracle Developer.

#### **Internal Views**

This section includes each private, internal view that Oracle Purchasing uses.

#### **Single-Organization Views**

This section lists the Oracle Purchasing views that we added to take the place of various tables that are now partitioned by operating unit, to support multiple sets of books within a single installation of Oracle Purchasing.

### **Multiple Reporting Currency Views**

This list includes views that were created to support the Multiple Reporting Currencies feature.

#### **Module List**

The Module List section briefly describes each of the Oracle Purchasing applications modules. This section lists forms, reports, and concurrent programs.

A form is a module comprised of closely related windows that are used together to perform a task. For example, the Enter Journals form in Oracle General Ledger includes the Enter Journals window, the Batch window, and the More Actions window. The Enter Journals window is the main window, and from it, you can use buttons to navigate to other windows in the form. The form name usually corresponds to the main window in the form, and is frequently a window you can open directly from the Navigator.

#### Oracle Proprietary, Confidential Information--Use Restricted by Contract

The Reports and Concurrent Programs lists include processes you can submit from the Submit Requests window or other windows, as well as processes that are submitted automatically by Oracle Purchasing. Use your user's guide to learn more about reports and concurrent processes.

## **Summary Database Diagram**

This Summary Database Diagram graphically represents the most important Oracle Purchasing applications tables and the relationships between them. It describes, at a conceptual level, the key information on which your Oracle Purchasing application depends.

This diagram does not represent the complete database implementation of Oracle Purchasing applications tables. It shows tables that contain key reference and transaction data, and omits tables and relationships that contribute little to the understanding of the Oracle Purchasing applications data model. For example, a foreign key relationship shown between two tables may actually be implemented by an intervening table, not shown in this diagram.

For more detailed graphical representations of Oracle Purchasing applications tables and the relationships between them, see the Database Diagrams section in this chapter.

## **Database Diagramming Conventions**

We use the following notational conventions in our database diagrams:

Figure 2 – 1 Database Diagram Conventions

**Tables** – are the basic unit of storage in the database. A hand symbol preceding the title in the table's title bar indicates that the table is not owned by this application but shared with another.

Foreign key constraint – is a type of referential integrity constraint for checking the integrity of data entered in a specific column or set of columns. This specified column or set of columns is known as the foreign key.

**Delete rule indicator** – determines the action to be taken when an attempt is made to delete a related row in a join table. A line through the foreign key constraint, as shown on the above diagram, indicates that this action is restricted.

Arcs - specify that, for any given row in a table, a value must be entered in one of the arc columns. The remaining columns within the arc must be null.

# **Oracle Purchasing Applications Summary Database Diagram**

Oracle Proprietary, Confidential Information-Use Restricted by Contract

## **Database Diagrams**

This section graphically represents all Oracle Purchasing applications tables and the relationships between them, organized by building block. Use this section to quickly learn what tables each Oracle Purchasing application building block uses, and how these tables interrelate. Then, you can refer to the Table and View Definitions sections of Chapter 3 for more detailed information about each of those tables.

This section contains a database diagram for each of the following Oracle Purchasing application building blocks:

• Diagram 1: Requisitions

• Diagram 2: Purchase Orders, Requests for Quotations,

and Quotations

Diagram 3: Sourcing

• Diagram 4: Receiving

• Diagram 5: Suppliers

• Diagram 6: Items

• Diagram 7: Options

Some tables, especially important reference tables, appear in more than one database diagram. When several building blocks use a table, we show that table in each appropriate database diagram.

#### Requisitions

Diagram 1 shows the tables and relationships associated with creating and maintaining requisitions in your Oracle Purchasing application. Related functions include importing requisitions from other systems, checking funds, and approving requisitions. The tables store preparer names, item types and categories, source details, currency information, and destination information.

## Purchase Orders, Requests for Quotations, and Quotations

Diagram 2 shows the tables and relationships associated with creating and maintaining purchase orders, requests for quotations (RFQs), and quotations. Related functions include entering blanket and contract purchase agreements, as well as automatically creating purchasing documents. The tables store purchase order headers, lines, shipments

and distributions, and other information related to purchasing goods or services from a supplier.

#### Sourcing

Diagram 4 shows the tables and relationships that store item sourcing information. This information includes approved supplier lists, the inventory sourcing hierarchy, RFQs, quotations, and MRP sourcing rules.

#### Receiving

Diagram 3 shows the tables and relationships that record the receipt of supplier shipments and inventory transfers, quality inspections for these receipts, the final delivery of the items received, and other information related to receiving goods or services from suppliers or inventory organizations.

#### **Suppliers**

Diagram 5 shows the tables and relationships that store supplier information. This information includes supplier names, sites, contacts, and other supplier defaults that you define.

#### **Items**

Diagram 6 shows the tables and relationships associated with items. This information includes items, substitute items, units of measure, item price and purchase history, hazardous materials, and approved supplier lists.

#### **Options**

Diagram 7 shows the tables and relationships associated with system operations. This information includes default information such as line type, encumbrance type, currency conversion type, numbering conventions, and document reports.

## **How to Use These Database Diagrams**

Here is an example of how you might use these database diagrams:

Suppose you want to write a custom report that summarizes the requisitions made for delivery to each of your seventeen factory and office locations. You turn to Diagram 1 to see the table structure for the Requisitions building block. You learn that each line of a requisition stored in PO\_REQUISITION\_LINES\_ALL is requested for delivery to a location defined in HR\_LOCATIONS. You also see that you can identify the requisition in PO\_REQUISITION\_HEADERS\_ALL and the requesting employee using HR\_EMPLOYEES.

Next, you turn to the Table and View Definitions section in Chapter 3 to learn about the columns in each of these tables and determine which columns are required for matching. Using this information, you write a report that shows, for each delivery location, a summary of the requisitioned items to be delivered to that location.

### **Public Table List**

This section lists each public database table that Oracle Purchasing uses and provides a brief description of each of those tables. The page reference is to the table description in Chapter 3.

Note that "public" tables are not necessarily intended for write access by custom code; Oracle Corporation supports write access using only standard Oracle Applications forms, reports, and programs, or any SQL write access to tables explicitly documented as API tables. For more information, see the How Not To Use This Manual section of this book's Introduction.

Oracle Purchasing uses the following Public tables:

Table Name	Description
AP_CHECKS_ALL	Supplier payment data (See page 3 – 8)
AP_DISTRIBUTION_SETS_ALL	Invoice Distribution Set definitions (See page 3 – 16)
AP_HOLDS_ALL	Invoice hold information (See page 3 – 18)
AP_INCOME_TAX_TYPES	1099 supplier types (See page 3 – 24)
AP_INVOICES_ALL	Detailed invoice records (See page 3 – 25)
AP_INVOICE_DISTRIBUTIONS_ALL	Invoice distribution line information (See page 3 – 33)
AP_INVOICE_PAYMENTS_ALL	Invoice payment records (See page 3 – 46)
AP_TAX_CODES_ALL	Tax code information (See page 3 – 51)
AP_TERMS_TL	Payment term definitions (See page 3 – 54)
BOM_CALENDAR_DATES	Workday calendar dates (See page 3 – 56)
BOM_DEPARTMENTS	Departments (See page 3 – 58)
BOM_RESOURCES	Resources, overheads, material cost codes, and material overheads (See page 3 – 60)
BOM_STANDARD_OPERATIONS	Standard operations (See page 3 – 63)
CST_ITEM_COSTS	Item cost summary (See page 3 – 66)
FA_CATEGORIES_B	Default financial information for asset categories (base MLS table) (See page $3$ – $68$ )

### **Public View List**

This section lists each public database view that Oracle Purchasing uses and provides a brief description of each of those views. These views may be useful for your custom reporting or other data requirements. The page reference is to the detailed view description in Chapter 3.

Oracle Purchasing uses the following public views:

View Name		Description
MTL_COUNTRY_	_ASSIGNMENTS_V	Joins territories and country assignments
MTL_ECONOMIC	Z_ZONES_VL	Joins the base economic zone table and translated economic zone table
MTL_LE_ECONO	OMIC_ZONES_V	Joins the table MTL_LE_ECONOMIC_ZONES, the view MTL_ECONOMIC_ZONES_VL and HR_LEGAL_ENTITIES
MTL_STAT_TYP	PE_USAGES_V	Joins STAT_TYPE_USAGES, HR Legal Entities, Category Sets, Economic Zones View, and HR Locations
PER_ORGANIZA	ATION_UNITS	Lists information about Organization Units (See page 3 – 267)
POA_BIS_SAVI	NGS_V	This view resolves the foreign key references in the POA_BIS_SAVINGS table. Please refer to the base table for further information. (See page 3 – 275)
POA_BIS_SUPP	PLIER_PERFORMANCE_V	This view is based on the POA_BIS_SUPPLIER_PERFORMANCE table. Please refer to the base view for further information. (See page 3 – 280)
POA_PURCHASE	_SALES_V	This view shows purchases and sales amounts for Operating Units (See page 3 – 282)

### Forms and Table View List

# **Single Organization View List**

Multi-Organization Support is a feature that allows you to implement multiple sets of books within a single installation of Oracle Payables, Oracle Receivables, Oracle Purchasing, and Oracle Order Entry/Shipping. Instead of using multiple installations to provide data security, data is secured by operating unit.

In Release 10.7, we added a column, ORG\_ID, to each base table that requires "partitioning" by operating unit, including all transaction tables and many reference tables, then renamed these tables to end with the suffix \_ALL. Then, to take the place of the renamed table, we create a view (named like the Release 10.6 or earlier table) containing a WHERE clause that automatically restricts data to a single operating unit. The WHERE clause relies upon the value of an Oracle global variable to indicate the current organization.

If you want to retrieve all information, regardless of operating unit, query the \_ALL table. For example, if you are running a cross-organization report, you probably want to query the \_ALL table.

However, if you want to report against only a single organization or operating unit, query the corresponding cross-organizational view, using the familiar 10.6-style table name. The view definition will automatically retrieve only data for your current operating unit.

**Additional Information:** Multiple Organizations in Oracle Applications

Oracle Purchasing uses the following Single Organization views:

# **Multiple Reporting Currencies View List**

This section lists each view that Oracle Purchasing uses to support the Multiple Reporting Currencies (MRC) feature. These views, under certain circumstances, replace the corresponding transaction tables but retrieve currency–sensitive information expressed in the reporting currency rather than in the functional currency for the associated set of books. That is, when you access a transaction table from the APPS\_MRC schema, an MRC synonym redirects your query to the corresponding MRC view; this MRC view ensures you retrieve currency amounts expressed in the currency associated with the reporting set of books, as indicated by the userenv variable.

If you have not installed Multiple Reporting Currencies, you do not need to use these views. If you do use MRC, standard product forms and reports automatically access data using these views whenever you sign on using a reporting currency responsibility.

Additional Information: Multiple Reporting Currencies, Oracle Applications Installation Manual, Volume 1: Architecture and Concepts; and Multiple Reporting Currencies in Oracle Applications

Oracle Purchasing uses the following Multiple Reporting Currencies views:

CHAPTER

3

# **Detailed Design**

his chapter presents a detailed design for implementing Oracle Purchasing and Oracle Public Sector Purchasing. It contains detailed definitions of tables and views that you may need to reference to write custom reports or use for other data extraction.

### Overview of Detailed Design

During Detailed Design, we specify in detail how each applications component should work. We prepare detailed definitions of tables and views.

You can refer to this Detailed Design chapter to gain a detailed understanding of the underlying structure and processing of Oracle Purchasing and Oracle Public Sector Purchasing that enables you to:

- · Convert existing application data
- Integrate your Oracle Purchasing application with your other applications systems
- Write custom reports
- Define alerts against Oracle Applications tables
- Create views for decision support queries using query tools
- Configure your Oracle Self–Service Web Applications

### **Table and View Definitions**

The Table and View Definitions section contains a detailed definition of Oracle Purchasing applications tables. For each table, it provides information about primary keys, foreign keys, QuickCodes, indexes, triggers, and sequences. It also gives you a detailed description of each column and its characteristics. In addition, it provides the SQL statement that defines each view. Review this section to get a detailed understanding of what tables your Oracle Purchasing application contains, and how it uses them to hold and access the information it needs.

### Table and View Definitions

This section contains a detailed description of each Oracle Purchasing and Oracle Public Sector Purchasing table and view that you may need to reference. For each table, it presents detailed information about:

- · Primary keys
- Foreign keys
- Column descriptions
- Indexes
- Oracle sequences
- Triggers
- View derivations

Because Oracle does not support customization of Oracle Application Object Library tables, we do not provide you with detailed information about them. Consequently, this section does not document all the FND\_% tables your Oracle Purchasing application uses.

The following sections appear in each table or view description:

### **Foreign Keys**

To help you understand the relationships between tables, we list each foreign key contained in a table. For each foreign key in a table, we list the primary key table name (the table to which a foreign key refers), its corresponding primary key columns, and the foreign key columns that refer to those primary key columns.

When the primary key table has a composite primary key, we list each column of the composite key sequentially.

If a table contains two or more distinct foreign keys that refer to the same primary key table, we repeat the primary key table name and list each of the distinct foreign keys separately.

### **QuickCodes Columns**

When a database column contains a QuickCodes value, which we implement using a foreign key to FND\_LOOKUPS, MFG\_LOOKUPS, or to some other lookup table, we list the QuickCodes type (lookup

type) to which the QuickCodes value must belong and a complete list of QuickCodes values and meanings. Some QuickCodes can be defined by you in the application. These values are designated as User-defined.

### **Column Descriptions**

We list the important characteristics of each column in a table or view. These characteristics include whether the column is part of the table's primary key, whether Oracle8i requires a value for this column, and the data type of the column. We also give you a brief description of how your Oracle Purchasing application uses the column.

When a column is part of a table's primary key, we append the notation (PK) to the name of that column.

To help you understand which columns your Oracle Purchasing application uses and which columns it does not use, we alert you to any unused column. When no module uses a database column, we show one of the following legends in the Description column:

Not	currently
used	1

Your Oracle Purchasing application does not use this column, although the column might be used in a future release.

No longer used

Your Oracle Purchasing application no longer uses this column. AutoInstall installs this column. Subsequent versions of your Oracle Purchasing application might not include this column.

## No longer installed

Your Oracle Purchasing application no longer uses this column. If you *upgraded* your software from an earlier version, you may still have this column, depending upon whether you chose to delete it during an upgrade process. If you *install* your Oracle Purchasing application, you do not have this column.

#### Standard Who Columns

Most Oracle Purchasing applications tables contain standard columns to support \ Row Who. When your program or SQL\*Plus command selects a row from a table, use these columns to determine who last updated the row. If your program or SQL\*Plus command updates or

inserts a row in an interface table, you must populate each of the five standard Who columns:

LAST\_UPDATE\_DATE Date when a user last updated this row

LAST\_UPDATED\_BY

User who last updated this row (foreign

key to FND\_USER.USER\_ID)

CREATION DATE

Date when this row was created

CREATED\_BY

User who created this row (foreign key to

FND\_USER.USER\_ID)

LAST\_UPDATE\_LOGIN Operating system login of user who last

updated this row (foreign key to

FND\_LOGINS.LOGIN\_ID). You should set this to NULL, or to 0 if NULL is not

allowed

Since every table containing Who columns has several foreign keys to the tables FND\_USER and FND\_LOGINS, we do not include the foreign key columns LAST\_UPDATED\_BY, CREATED\_BY, or LAST\_UPDATE\_LOGIN in a table's list of foreign keys.

### **Additional Who Columns for Concurrent Programs**

Some Oracle Purchasing applications tables also contain several additional Who columns to distinguish between changes a user makes with a form and changes a concurrent program makes. When a concurrent program updates or inserts a row in a table, the concurrent program populates the following additional Who columns:

REQUEST\_ID Concurrent request ID of program that last

updated this row (foreign key to

FND\_CONCURRENT\_REQUESTS.RE-

QUEST\_ID)

PROGRAM\_APPLICATION\_ID Application ID of program that last

updated this row (foreign key to

FND APPLICATION.APPLICATION ID)

PROGRAM ID Program ID of program that last updated

this row (foreign key to FND\_CONCUR-RENT\_PROGRAM.CONCURRENT\_PRO-

GRAM\_ID)

PROGRAM\_UPDATE\_DATE Date when a program last updated this

row

Since every table containing these additional Who columns has several foreign keys to the tables FND\_CONCURRENT\_REQUESTS, FND\_APPLICATION, and FND\_CONCURRENT\_PROGRAM, we do not include the foreign key columns REQUEST\_ID, PROGRAM\_APPLICATION\_ID, or PROGRAM\_ID in a table's list of foreign keys.

### **Indexes**

If an Oracle Purchasing applications table uses an Oracle8i index, we list the database columns that comprise that index, in sequential order.

**Note:** The indexes we document in this manual correspond to unique keys we specified during product development and testing. In some cases, we may add additional indexes during the porting process to fine–tune performance on specific platforms; therefore, there may be minor differences between the indexes documented in this book and the indexes for production versions of Oracle Purchasing.

### **Sequences**

Your Oracle Purchasing application uses Oracle8i sequence generators to generate unique integers. If any table column gets its value from an Oracle8i sequence generator, we list the name of the corresponding sequence generator and the name of the column that stores the unique integer.

### **Database Triggers**

If a table has one or more active database triggers, we provide a brief explanation of each database trigger and when it fires.

### View Derivation

For each Oracle Purchasing applications view you may need to reference, we include important elements from the SQL statement that

	defines or creates a view. By studying this view definition, you can understand exactly how a view derives its contents.

### AP\_CHECKS\_ALL

AP\_CHECKS ALL stores information about payments issued to suppliers or refunds received from suppliers. You need one row for each payment you issue to a supplier or refund received from a supplier. Your Oracle Payables application uses this information to record payments you make to suppliers or refunds you receive from suppliers. Your Oracle Payables application stores the supplier name and bank account name for auditing purposes, in case either one is changed after you create the payment. Your Oracle Payables application stores address information for all payments. If you allow changes to the supplier payment address on manual payments or Quick payments. your Oracle Payables application maintains the new address information in this table. Your Oracle Payables application uses BANK ACCOUNT NUM, BANK NUM, and BANK ACCOUNT TYPE for the supplier's bank information when you use the Electronic payment method. Your Oracle Payables application stores a dummy value for CHECK STOCK ID for refunds, thus, CHECK\_STOCK\_ID should not be treated as a foreign key to AP CHECK STOCKS ALL in the case of refunds.

#### Database Triggers

Trigger Name : AX\_AP\_CHECKS\_BRI1

Trigger Time : BEFORE
Trigger Level : ROW
Trigger Event : INSERT

This trigger captures information needed to create subledger accounting events when Oracle Payables and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger may insert/update/delete rows in the AX\_DOCUMENT\_STATUSES and AX\_EVENTS tables. This trigger captures accounting events for Oracle Payables payment transactions. It fires right before a payment is created.

Trigger Name : AX\_AP\_CHECKS\_ARU1

Trigger Time : AFTER
Trigger Level : ROW
Trigger Event : UPDATE

This trigger captures information needed to create subledger accounting events when Oracle Payables and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger may insert/update/delete rows in the AX\_DOCUMENT\_STATUSES and AX\_EVENTS tables. This trigger captures accounting events for Oracle Payables payment transactions. It fires after a row is updated.

Trigger Name : AX\_AP\_CHECKS\_ARU2

Trigger Time : AFTER
Trigger Level : ROW
Trigger Event : UPDATE

This trigger captures information needed to create subledger accounting events when Oracle Payables and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger may insert/update/delete rows in the AX\_DOCUMENT\_STATUSES and AX\_EVENTS tables. This trigger captures accounting events for Oracle Payables payment transactions. It fires after a not null document sequence is assigned to the payment.

Trigger Name : AP\_MRC\_CHECKS\_BIUD

Trigger Time : BEFORE Trigger Level : ROW

Trigger Event : INSERT, UPDATE, DELETE

This MRC trigger exists only when you install the Multiple Reporting Currencies feature. It is executed when you perform an insert, update, or delete statement on the table AP\_CHECKS\_ALL. For each record being inserted/updated/deleted in AP\_CHECKS\_ALL, this trigger inserts/updates/deletes corresponding reporting currency records in the MRC subtable, AP\_MC\_CHECKS. In addition, this trigger also populates the MRC VARCHAR2 columns in AP\_CHECKS\_ALL.

### AP\_DISTRIBUTION\_SETS\_ALL

AP\_DISTRIBUTION\_SETS\_ALL contains information about Distribution Sets you define to distribute invoices automatically. You need one row for each Distribution Set you use in your Oracle Payables application. When you enter an invoice, you can select a Distribution Set that you define in this table. When you select a Distribution Set for an invoice, your Oracle Payables application automatically creates invoice distribution lines according to the lines you define for the Distribution Set you select. A Distribution Set must have one or more Distribution Set lines.

This table corresponds to the Distribution Sets window.

### AP\_HOLDS\_ALL

AP\_HOLDS\_ALL contains information about holds that you or your Oracle Payables application place on an invoice. For non-matching holds, there is one row for each hold placed on an invoice. For matching holds, there is one row for each hold placed on an invoice–shipment match. An invoice may have one or more corresponding rows in this table. Your Oracle Payables application does not pay invoices that have one or more unreleased holds recorded in this table.

This table holds information referenced by the Invoice Holds window.

In the strictest sense, AP\_HOLDS\_ALL has no primary key. It is possible for your Oracle Payables application to place a certain type of hold on an invoice, then release it, then place another hold of the same type (if data changes before each submission of Approval), which would result in a duplicate primary key. But for practical purposes, the primary key is a concatenation of INVOICE\_ID, LINE\_LOCATION\_ID, and HOLD\_LOOKUP\_CODE.

### AP\_INCOME\_TAX\_TYPES

AP\_INCOME\_TAX\_TYPES stores the 1099–MISC types that you can assign to a supplier for 1099 reporting. There is one row for each type you use to identify a supplier as a 1099 supplier. When you enter a supplier, you can select a 1099–MISC type if you define the supplier as Federal Reportable.

### AP\_INVOICES\_ALL

AP\_INVOICES\_ALL contains records for invoices you enter. There is one row for each invoice you enter. An invoice can have one or more invoice distribution lines. An invoice can also have one or more scheduled payments.

An invoice of type EXPENSE REPORT must relate to a row in AP\_EXPENSE\_REPORT\_HEADERS\_ALL unless the record has been purged from AP\_EXPENSE\_REPORT\_HEADERS\_ALL. Your Oracle Payables application uses the INTEREST type invoice for interest that it calculates on invoices that are overdue. Your Oracle Payables application links the interest invoice to the original invoice by inserting the INVOICE\_ID in the AP\_INVOICE\_RELATIONSHIPS table.

This table corresponds to the Invoices window.

#### Database Triggers

Trigger Name : AX\_AP\_INVOICES\_ARU1

Trigger Time : AFTER Trigger Level : ROW Trigger Event : UPDATE

This trigger captures information needed to create subledger accounting events when Oracle Payables and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger may insert/update/delete rows in the AX\_DOCUMENT\_STATUSES and AX\_EVENTS tables. This trigger captures accounting events for Oracle Payables invoices. It fires right after the invoice is canceled.

Trigger Name : AX\_AP\_INVOICES\_ARU2

Trigger Time : AFTER
Trigger Level : ROW
Trigger Event : UPDATE

This trigger captures information needed to create subledger accounting events when Oracle Payables and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger may insert/update/delete rows in the AX\_DOCUMENT\_STATUSES and AX\_EVENTS tables. This trigger captures accounting events for Oracle Payables invoices. It fires right after a document sequence is assigned to the invoice.

Trigger Name : AX\_AP\_INVOICES\_ARU3

Trigger Time : AFTER
Trigger Level : ROW
Trigger Event : UPDATE

This trigger captures information needed to create subledger accounting events when Oracle Payables and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger may insert/update/delete rows in the AX\_DOCUMENT\_STATUSES and AX\_EVENTS tables. This trigger captures accounting events for Oracle Payables invoices. It fires right after the vendor on the invoice is changed.

Trigger Name : AX\_AP\_INVOICES\_BRDI1

Trigger Time : BEFORE
Trigger Level : ROW

Trigger Event : INSERT, DELETE

This trigger captures information needed to create subledger accounting events when Oracle Payables and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger may insert/update/delete rows in the AX\_DOCUMENT\_STATUSES and AX\_EVENTS tables. This trigger captures accounting events for Oracle Payables invoices. It fires right before the invoice is created or deleted.

Trigger Name : AP\_MRC\_INVOICES\_BIUD

Trigger Time : BEFORE Trigger Level : ROW

Trigger Event : INSERT, UPDATE, DELETE

This MRC trigger exists only when you install the Multiple Reporting Currencies feature. It is executed when you perform an insert, update, or delete statement on the table AP\_INVOICES\_ALL.

For each record being inserted/updated/deleted in AP\_INVOICES\_ALL, this trigger inserts/updates/deletes corresponding reporting currency records in the MRC subtable, AP\_MC\_INVOICES. In addition, this trigger also populates the MRC VARCHAR2 columns in AP\_INVOICES\_ALL.

### AP INVOICE DISTRIBUTIONS ALL

AP\_INVOICE\_DISTRIBUTIONS\_ALL holds the distribution line information that you enter for invoices. There is a row for each invoice distribution. A distribution line must be associated with aninvoice. An invoice can have multiple distribution lines. Your Oracle Payables application automatically creates rows in this table when: 1) you choose a distribution set at the invoice level 2) you import expense reports 3) you match an invoice to a purchase order or receipt;it uses information from the matched purchase order or receipt4) you import invoices via the Open Interface Import process5) you select to automatically calculate tax 6) you select to automatically do withholding.

Each invoice distribution line has its own accounting date. When you account for an invoice, your Oracle Payables application creates accounting events, accounting entry headers and accounting entry lines for those distribution lines that have accounting dates included in the selected accounting date range for the Payables Accounting Process. The accounting entries can then be transferred over to General Ledger by running the Transfer to General Ledger process which creates journal entries.

Values for POSTED\_FLAG may be Y for accounted distributions or N for distributions that have not been accounted. Values for ACCRUAL\_POSTED\_FLAG may be Y if the distribution has been accounted and the system is set up for accrual basis accounting or N if either distribution has not been accounted or accrual basis accounting is not used.

Values for CASH\_POSTED\_FLAG may be Y if distribution has been accounted and system is set up for cash basis accounting, N if either distribution has not been accounted or system is not setup for cash basis accounting or P if distribution has been partially accounted in the cash set of books.

The MATCH\_STATUS\_FLAG indicates the approval status for the distribution. Values for the MATCH\_STATUS\_FLAG can be null or N for invoice distributions that Approval has not tested or T for distributions that have been tested or A for distributions that have been tested and approved.

Invoice distributions may be interfaced over/from Oracle Assets or Oracle Projects. Your Oracle Payables application sets the ASSETS\_ADDITION\_FLAG to U for distributions not tested by Oracle Assets; Oracle Assets then adjusts this flag after it tests a distribution for assignment as an asset. To avoid the same invoice distribution being interfaced to both Oracle Projects and Oracle Assets, you must interface

any project-related invoice distribution to Oracle Projects before you can interface it to Oracle Assets. If the project-related invoice distribution is charged to a capital project in Oracle Projects, Oracle Projects sets the ASSET\_ADDITION\_FLAG to P when the PA\_ADDITION\_FLAG is set to Y, Z or T. Oracle Assets only picks up invoice distributions with the ASSET ADDITION FLAG set to U and if project-related, with the PA ADDITION FLAG set to Y, Z, or T. PA ADDITION FLAG tracks the status of project-related supplier invoice distribution lines and expense report distribution lines. For supplier invoice distributions entered via Oracle Payables, the PA ADDITION FLAG is set to N if the distribution is project-related, otherwise it is set to E and it is updated by Oracle Projects when the distribution is processed by the Oracle Projects Interface Supplier Invoice process. Oracle Projects sets the PA ADDITION FLAG to Y or Z after the item is successfully processed, or may be set to a rejection code if the line is rejected during transfer to Oracle Projects; see QuickCodes listing for all the errors. You must correct the rejection reason and try to retransfer the line. For supplier invoice adjustment lines interfaced from Oracle Projects to Oracle Payables (which must net to zero with another line), the value for the PA\_ADDITION\_FLAG is set to T. For expense report distributions interfaced from Oracle Projects to Oracle Payables via Invoice Import, this value is set to N. This row is never picked up by the Interface Supplier Invoices process based on the

AP\_INVOICES.INVOICE\_TYPE\_LOOKUP\_CODE = EXPENSE REPORT. For expense report adjustment lines interfaced from Oracle Projects to Oracle Payables which net to zero with another line, this value is set to T. Both lines are associated with the original invoice by the Oracle Projects Interface Expense Reports to AP process.

Values for the ENCUMBERED\_FLAG are as follows: Y indicates a regular distribution that has been successfully encumbered by Payables; W indicates a regular distribution that has been encumbered in advisory mode even though insufficient funds existed; H indicates a regular distribution that has not been encumbered because it was put on hold; N or null indicates a regular line that has not been encumbered because it has not been looked at yet; D is the same as Y for a reversal distribution line; X is the same as W for a reversal distribution line; P is the same as H for a reversal distribution line; R indicates a line to be ignored by encumbrance and approval code because neither the original nor the reversal distributions were looked at and they offset each other, so they can be ignored.

This table corresponds to the Distributions window.

#### Database Triggers

Trigger Name : AX\_AP\_INVOICE\_DIST\_ARU1

Trigger Time : AFTER
Trigger Level : ROW
Trigger Event : UPDATE

This trigger captures information needed to create subledger accounting events when Oracle Payables and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger may insert/update/delete rows in the AX\_DOCUMENT\_STATUSES and AX\_EVENTS tables. This trigger captures accounting events related to Oracle Payables invoices. It fires right after each invoice distribution line's matching status, accrual posting flag, or accounting date is changed.

Trigger Name : AX\_AP\_INVOICE\_DIST\_ARDI1

Trigger Time : AFTER
Trigger Level : ROW

Trigger Event : INSERT, DELETE

This trigger captures information needed to create subledger accounting events when Oracle Payables and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger may insert/update/delete rows in the AX\_DOCUMENT\_STATUSES and AX\_EVENTS tables. This trigger captures accounting events related to Oracle Payables invoices. It fires right after each invoice distribution line is created or deleted.

Trigger Name : AP\_MRC\_INVOICE\_DISTS\_BIUD

Trigger Time : BEFORE Trigger Level : ROW

Trigger Event : INSERT, UPDATE, DELETE

This MRC trigger exists only when you install the Multiple Reporting Currencies feature. It is executed when you perform an insert, update, or delete statement on the table AP\_INVOICE\_DISTRIBUTIONS\_ALL.

For each record being inserted/updated/deleted in AP\_INVOICE\_DISTRIBUTIONS\_ALL, this trigger inserts/updates/deletes corresponding reporting currency records in the MRC subtable, AP\_MC\_INVOICE\_DISTS. In addition, this trigger also populates the MRC VARCHAR2 columns in AP\_INVOICE\_DISTRIBUTIONS\_ALL.

Trigger Name : JL\_BR\_AP\_TAX\_HOLDS

Trigger Time : BEFORE Trigger Level : ROW Trigger Event : UPDATE

This trigger prevents Payables from automatically creating "Tax Variance" and "Tax Amount Range" holds when Brazilian taxes exist.

This trigger is installed and active only if Latin American Localizations have been installed.

The validation is performed when the current country is Brazil.

# AP\_INVOICE\_PAYMENTS\_ALL

AP\_INVOICE PAYMENTS\_ALL contains records of invoice payments that you made to suppliers. There is one row for each payment you make for each invoice. There is one payment and one invoice for each payment in this table. Your Oracle Payables application updates this table when you confirm an automatic payment batch, enter a manual payment, or process a Quick payment. When you void a payment, your Oracle Payables application inserts an additional payment line that is the negative of the original payment line.

Values for POSTED\_FLAG may be 'Y' for accounted payments or 'N' for unaccounted payments. Values for ACCRUAL\_POSTED\_FLAG may be 'Y' for accounted payments or 'N' for unaccounted payments under accrual basis accounting; values for CASH\_POSTED\_FLAG may be 'Y' for accounted payments or 'N' for unaccounted payments under cash basis accounting.

For manual payments and Quick payments, this table corresponds to the Select Invoices window in the Payment workbench.

#### Database Triggers

Trigger Name : AX\_AP\_INVOICE\_PAY\_ARU1

Trigger Time : AFTER
Trigger Level : ROW

Trigger Event : INSERT, DELETE

This trigger captures information needed to create subledger accounting events when Oracle Payables and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger updates the document in the table, AX\_DOCUMENT\_STATUSES. This trigger maintains the unposted line count in table AX\_DOCUMENT\_STATUSES for Oracle Payables invoice payments. It executes right after an invoice payment line is posted.

Trigger Name : AX\_AP\_INVOICE\_PAY\_ARDI1

Trigger Time : AFTER
Trigger Level : ROW

Trigger Event : INSERT, DELETE

This trigger captures information needed to create subledger accounting events when Oracle Payables and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger may insert/update/delete rows in the AX\_DOCUMENT\_STATUSES and AX\_EVENTS tables. This trigger captures accounting events related to Oracle Payables invoice payments. It fires right after a payment is made for an invoice, or when the payment is voided, or deleted.

Trigger Name : AP\_MRC\_INVOICE\_PAYMENTS\_BID

Trigger Time : BEFORE Trigger Level : ROW

Trigger Event : INSERT, DELETE

The MRC trigger exists only when you install the Multiple Reporting Currencies feature. It is executed when you perform an insert, update, or delete statement on the table AP\_INVOICE\_PAYMENTS\_ALL.

For each record being inserted/updated/deleted in AP\_INVOICE\_PAYMENTS\_ALL, this trigger inserts/updates/deletes corresponding reporting currency records in the MRC subtable, AP\_MC\_INVOICE\_PAYMENTS. In addition, this trigger also populates the MRC VARCHAR2 columns in AP\_INVOICE\_PAYMENTS\_ALL.

ATTRIBUTE4

ATTRIBUTE5

AP\_TAX\_CODES\_ALL contains information about the tax codes you define. You need one row for each tax code you want to use when entering invoices. When you enter invoices, you can use a list of values to select a tax code defined in this table. Your Oracle Payables application also uses TAX\_RATE to calculate use tax when you enter a taxable amount for an invoice.

This table corresponds to the Tax Names window.

## BOM\_CALENDAR\_DATES

BOM\_CALENDAR\_DATES stores data compiled by the workday calendar for the base calendar. This table stores every date between the calendar start date and calendar end date for the given calendar using a specified exception set.

The workday calendar program sequences each work day for the calendar, starting with 1. Non-working days have NULL values for SEQ\_NUM. PRIOR\_SEQ\_NUM and NEXT\_SEQ\_NUM point to the previous and next workdays. For rows that represent workdays, prior equals next. For non-working days prior points to previous workday and next points to next workday.

# **BOM\_DEPARTMENTS**

BOM\_DEPARTMENTS stores department information. You cannot use the department in an operation after its DISABLE\_DATE. DEPARTMENT\_ID uniquely identifies each row. You can assign a delivery location for each department if you use outside processing resources.

## **BOM\_RESOURCES**

BOM\_RESOURCES stores information about resources, overheads, material overheads, and material sub–elements. COST\_ELEMENT\_ID determines the type of the resource. Resources are additionally classified as either material resources or outside processing resources

If the resource represents a currency unit, UNIT\_OF\_MEASURE stores the currency code associated with the set of books the organization points to.

## BOM\_STANDARD\_OPERATIONS

BOM\_STANDARD\_OPERATIONS stores information about the standard operations, events, processes, and line operations that you define. Events/processes/line operations are for Flow Manufacturing.

You can use these standard operations/events/processes/line operations when you define routing steps to build your assembly. The Define Routing window defaults all data for the standard operation/events/processes/line operation into the routing step.

### BOM\_OPERATION\_SEQUENCES and

BOM\_STANDARD\_OPERATIONS share the descriptive flex definition. Therefore, the Define Routing window will also copy the descriptive flex information into the routing step.

Database Triggers

Trigger Name : BOM\_STANDARD\_OPERATIONS\_T

Trigger Time : BEFORE Trigger Level : ROW Trigger Event : UPDATE

When you update a standard operation that is referenced by routing operations, this trigger updates all the corresponding rows that reference routing operations in the BOM\_OPERATION\_SEQUENCES table.

## CST\_ITEM\_COSTS

CST\_ITEM\_COSTS stores item cost control information by cost type.

For standard costing organizations, the item cost control information for the Frozen cost type is created when you enter a new item. For average cost organizations, item cost control information is created when you transact the item for the first time.

You can use the Item Costs window to enter cost control information.

## FA\_CATEGORIES\_B

OuickCodes Columns

FA\_CATEGORIES\_B stores information about your asset categories. This table provides default information when you add an asset. The depreciation program does not use this information to calculate depreciation.

The Asset Categories form inserts one row in this table for each asset category you define.

The Application Object Library table FND\_ID\_FLEX\_SEGMENTS stores information about which column in this table is used for each segment.

#### FND\_CURRENCIES

Foreign Keys

FND\_CURRENCIES stores information about currencies. Each row includes the currency code (CURRENCY\_CODE) established by ISO (International Standards Organization) standard, the name of the currency (NAME), a flag to indicate whether the currency is enabled for use at your site (ENABLED\_FLAG), a flag to indicate if this is a currency or a statistical unit (CURRENCY\_FLAG), and the territory code of the issuing country (ISSUING\_TERRITORY\_CODE). Each row also includes the number of digits to the right of the decimal point (PRECISION), the extended precision (EXTENDED\_PRECISION), the symbol denoting the currency, a description of the currency, and descriptive flexfield attribute columns. There is also information on when the currency becomes active and inactive, and the minimum accountable unit for the currency. You need one row for each currency defined with Oracle Application Object Library. Oracle Application Object Library uses this information to display dynamic currency values. You can also use this information to assign a currency to a set of books.

## FND\_DUAL

FND\_DUAL stores a dummy constant value. You always need at least one row in this table. Oracle Application Object Library provides this table as a base table for forms that only submit concurrent requests (such as reporting forms) and therefore need to perform a commit cycle without updating an application database table. Such forms generally insert a record into this table (usually the value 1). You should delete rows from this table occasionally, but you should always leave at least one row in this table (for a form that may update a record instead of inserting one).

Column Descriptions

Name	Null? Type	Description
DUMMY	NULL NUMBER(2)	Dummy column

#### **GL\_BALANCES**

GL\_BALANCES stores actual, budget, and encumbrance balances for detail and summary accounts. This table stores functional currency, foreign currency, and statistical balances for each accounting period that has ever been opened. ACTUAL\_FLAG is either 'A', 'B', or 'E' for actual, budget, or encumbrance balances, respectively. If ACTUAL\_FLAG is 'B', then BUDGET\_VERSION\_ID is required. If ACTUAL\_FLAG is 'E', then ENCUMBRANCE\_TYPE\_ID is required. GL\_BALANCES stores period activity for an account in the PERIOD\_NET\_DR and PERIOD\_NET\_CR columns. The table stores the period beginning balances in BEGIN\_BALANCE\_DR and BEGIN\_BALANCE\_CR. An account's year-to-date balance is calculated as BEGIN\_BALANCE\_DR - BEGIN\_BALANCE\_CR + PERIOD\_NET\_DR - PERIOD\_NET\_CR. Detail and summary foreign currency balances that are the result of posted foreign currency journal entries have TRANSLATED\_FLAG set to 'R', to indicate that the row is a candidate for revaluation.

For foreign currency rows, the begin balance and period net columns contain the foreign currency balance, while the begin balance and period net BEQ columns contain the converted functional currency balance. Detail foreign currency balances that are the result of foreign currency translation have TRANSLATED\_FLAG set to 'Y' or 'N'. 'N' indicates that the translation is out of date (i.e., the account needs to be re–translated). 'Y' indicates that the translation is current. Summary foreign currency balances that are the result of foreign currency translation have TRANSLATED\_FLAG set to NULL. All summary account balances have TEMPLATE\_ID not NULL. The columns that end in ADB are not used. Also, the REVALUATION\_STATUS column is not used.

## GL\_BC\_PACKETS

T----

GL\_BC\_PACKETS is Oracle General Ledger's main table for the Budgetary Control feature. This table stores the budgetary control packets that need to be approved before creating journal entries.

A budgetary control packet contains information about a set of transaction(s) you want to approve before entering it into the system. The Funds Checker program evaluates these packets and updates the RESULT\_CODE column in GL\_BC\_PACKETS with a lookup code signifying the result of the funds check.

Once a packet passes its funds check and a journal entry batch is created, the packet is removed from GL\_BC\_PACKETS.

# **GL\_BUDGET\_VERSIONS**

GL\_BUDGET\_VERSIONS stores information about budget versions. Oracle General Ledger does not support multiple versions of the same budget. Therefore, there is one row in this table for each row in the GL\_BUDGETS table. The column VERSION\_NUM is always set to 1.

## **GL\_CODE\_COMBINATIONS**

GL\_CODE\_COMBINATIONS stores valid account combinations for each Accounting Flexfield structure within your Oracle General Ledger application. Associated with each account are certain codes and flags, including whether the account is enabled, whether detail posting or detail budgeting is allowed, and others.

Segment values are stored in the SEGMENT columns. Note that each Accounting Flexfield structure may use different SEGMENT columns within the table to store the flexfield value combination. Moreover, the SEGMENT columns that are used are not guaranteed to be in any order.

The Oracle Application Object Library table FND\_ID\_FLEX\_SEGMENTS stores information about which column in this table is used for each segment of each Accounting Flexfield structure. Summary accounts have SUMMARY\_FLAG = 'Y' and TEMPLATE\_ID not NULL. Detail accounts have SUMMARY\_FLAG = 'N' and TEMPLATE\_ID NULL.

# **GL\_INTERFACE**

GL\_INTERFACE is the table you use to import journal entry batches through Journal Import. You insert rows in this table and then use the Import Journals form to create journal batches. You must supply values for all NOT NULL columns. For a complete description of how to load this table, see the Oracle General Ledger User Guide.

## **GL\_INTERFACE\_CONTROL**

GL\_INTERFACE\_CONTROL is used to control Journal Import execution. Whenever you start Journal Import from the Import Journals form, a row is inserted into this table for each source and group id that you specified. When Journal Import completes, it deletes these rows from the table.

## **GL\_JE\_BATCHES**

GL\_JE\_BATCHES stores journal entry batches. Each row includes the batch name, description, status, running total debits and credits, and other information. This table corresponds to the Batch window of the Enter Journals form. STATUS is 'U' for unposted, 'P' for posted, 'S' for selected, 'I' for in the process of being posted. Other values of status indicate an error condition. STATUS\_VERIFIED is 'N' when you create or modify an unposted journal entry batch. The posting program changes STATUS\_VERIFIED to 'I' when posting is in process and 'Y' after posting is complete.

# **GL\_JE\_CATEGORIES\_TL**

GL\_JE\_CATEGORIES\_TL stores journal entry categories. Each row includes the category name and description. Each journal entry in your Oracle General Ledger application is assigned a journal entry category to identify its purpose. This table corresponds to the Journal Categories form. This table has no foreign keys, other than the standard Who columns.

## **GL\_JE\_HEADERS**

GL\_JE\_HEADERS stores journal entries. There is a one-to-many relationship between journal entry batches and journal entries. Each row in this table includes the associated batch ID, the journal entry name and description, and other information about the journal entry. This table corresponds to the Journals window of the Enter Journals form. STATUS is 'U' for unposted, 'P' for posted. Other statuses indicate that an error condition was found. A complete list is below.

CONVERSION\_FLAG equal to 'N' indicates that you manually changed a converted amount in the Journal Entry Lines zone of a foreign currency journal entry. In this case, the posting program does not re-convert your foreign amounts. This can happen only if your user profile option MULTIPLE\_RATES\_PER\_JE is 'Yes'.

BALANCING\_SEGMENT\_VALUE is null if there is only one balancing segment value in your journal entry. If there is more than one.BALANCING\_SEGMENT\_VALUE is the greatest balancing

### **GL\_JE\_LINES**

GL\_JE\_LINES stores the journal entry lines that you enter in the Enter Journals form. There is a one-to-many relationship between journal entries and journal entry lines. Each row in this table stores the associated journal entry header ID, the line number, the associated code combination ID, and the debits or credits associated with the journal line. STATUS is 'U' for unposted or 'P' for posted.

### GL\_JE\_SOURCES\_TL

GL\_JE\_SOURCES\_TL stores journal entry source names and descriptions. Each journal entry in your Oracle General Ledger application is assigned a source name to indicate how it was created. This table corresponds to the Journal Sources form. This table has no foreign keys other than the standard Who columns.

### **GL\_PERIODS**

GL\_PERIODS stores information about the accounting periods you define using the Accounting Calendar form. Each row includes the start date and end date of the period, the period type, the fiscal year, the period number, and other information. There is a one-to-many relationship between a row in the GL\_PERIOD\_SETS table and rows in this table.

#### **GL\_PERIOD\_STATUSES**

GL\_PERIOD\_STATUSES stores the statuses of your accounting periods. Each row includes the accounting period name and status. Other applications maintain their calendars in this table, so each row also includes the relevant application identifier. CLOSING\_STATUS is either 'O' for open, 'F' for future enterable, 'C' for closed, 'P' for permanently closed, or 'N' for never opened. Note that you cannot successfully open a period in your Oracle General Ledger application by changing a period's status to 'O' if it has never been opened before. You must use the Open and Close Periods form to properly open a period.

#### Database Triggers

Trigger Name : GL\_MRC\_PERIOD\_STATUSES\_AU

Trigger Time : AFTER
Trigger Level : STATEMENT
Trigger Event : UPDATE

The GL\_MRC\_PERIOD\_STATUSES\_AU trigger maintains the subledger period statuses for reporting sets of books. Whenever a subledger period is opened, closed, or permanently closed for a primary set of books, this trigger opens, closes, or permanently closes the corresponding subledger period in the associated reporting sets of books.

Trigger Name : GL\_MRC\_PERIOD\_STATUSES\_BRU

Trigger Time : BEFORE
Trigger Level : ROW
Trigger Event : UPDATE

The GL\_MRC\_PERIOD\_STATUSES\_BRU trigger caches data necessary for the GL\_MRC\_PERIOD\_STATUSES\_AU trigger. It also does some maintenance of period statuses necessary for the Global Accounting Engine.

### **GL\_PERIOD\_TYPES**

GL\_PERIOD\_TYPES stores the period types you define using the Period Types form. Each row includes the period type name, the number of periods per fiscal year, and other information. YEAR\_TYPE\_IN\_NAME is 'C' for calendar or 'F' for fiscal. This determines the system—assigned name of your accounting period in the Accounting Calendar form.

### **GL\_SETS\_OF\_BOOKS**

GL\_SETS\_OF\_BOOKS stores information about the sets of books you define in your Oracle General Ledger application. Each row includes the set of books name, description, functional currency, and other information. This table corresponds to the Set of Books form.

#### Database Triggers

Trigger Name : HR\_LOCATIONS\_ALL\_OVN

Trigger Time : BEFORE Trigger Level : ROW

Trigger Event : INSERT, UPDATE

This trigger maintains the object\_version\_number column when a record is modified via an interface which does not support the object\_version\_number explicitly. This ensures the object\_version\_number is maintained consistently.

#### MRP\_SR\_ASSIGNMENTS

ATTRIBUTE3

MRP\_SR\_ASSIGNMENTS stores the assignment of sourcing rules or bills of distribution to items, organizations, category, or at the global level. This table is populated by the Assign Sourcing Rules form of Oracle Supply Chain Planning.

This table is used by the Memory-based Snapshot to determine the sourcing information or an item in an organization. The Memory-based Snapshot uses the most granular ASSIGNMENT\_LEVEL to determine the sourcing for an item-organization.

#### MRP\_SR\_RECEIPT\_ORG

MRP\_SR\_RECEIPT\_ORG stores information on the receiving organizations for Sourcing Rules and Bills of Distribution. Each row in this table specifies a receiving organization for a date range. This table is a child of MRP\_SOURCING\_RULES.

In case of Local Sourcing Rules the column RECEIPT\_ORGANIZATION\_ID is the same as the ORGANIZATION\_ID in MRP\_SOURCING\_RULES. For Global Sourcing Rules the column RECEIPT\_ORGANIZATION\_ID is Null.

This table is populated by the Define Sourcing Rule and Define Bills of distribution forms of Oracle Supply Chain Planning.

#### MTL\_CATEGORIES\_B

MTL\_CATEGORIES\_B is the code combinations table for item categories. Items are grouped into categories within the context of a category set to provide flexible grouping schemes.

The item category is a key flexfield with a flex code of MCAT. The flexfield structure identifier is also stored in this table to support the ability to define more than one flexfield structure (multi-flex).

Item categories now support multilingual category description. MLS is implemented with a pair of tables: MTL\_CATEGORIES\_B and MTL\_CATEGORIES\_TL.

#### MTL\_CATEGORY\_SETS\_B

MTL\_CATEGORY\_SETS\_B contains the entity definition for category sets. A category set is a categorization scheme for a group of items. Items may be assigned to different categories in different category sets to represent the different groupings of items used for different purposes. An item may be assigned to only one category within a category set, however.

STRUCTURE\_ID identifies the flexfield structure associated with the category set. Only categories with the same flexfield structure may be grouped into a category set.

CONTROL\_LEVEL defines whether the category set is controlled at the item or the item/organization level. When an item is assigned to an item level category set within the item master organization, the category set assignment is propagated to all other organizations to which the item is assigned.

VALIDATE\_FLAG defines whether a list of valid categories is used to validate category usage within the set. Validated category sets will not allow item assignment to the category set in categories that are not in a predefined list of valid categories.

Category Sets now support multilingual category set name and description. MLS is implemented with a pair of tables: MTL\_CATEGORY\_SETS\_B and MTL\_CATEGORY\_SETS\_TL.

#### MTL\_CATEGORY\_SET\_VALID\_CATS

MTL\_CATEGORY\_SET\_VALID\_CATS defines the valid category list for a particular category set. A category set may be defined to either require category validation or not. If category validation is required, the list of valid categories for the category set is stored in this table. This list is then used to restrict category selection for the category set.

## MTL\_COUNTRY\_ASSIGNMENTS

MTL\_COUNTRY\_ASSIGNMENTS stores information concerning the assignment of countries to economic zones. Each economic zone is a composition of multiple countries. Each country can be assigned to more than one economic zone.

## MTL\_CROSS\_REFERENCES

MTL\_CROSS\_REFERENCES is used to assign cross-references to items. The cross reference type code identifies the cross-referencing identification system being used. The cross-reference identifies the specific relationship between the item and the other identification system. This can include references to an old item identification scheme, to supplier item identification, etc. Each inventory item can be assigned any number of cross-references for any number of cross- reference types.

The ORG\_INDEPENDENT\_FLAG designates the cross-reference as being either organization independent or organization dependent. If the cross-reference is organization independent, then the cross-reference is valid across all the organizations to which the item is assigned. Otherwise, the cross reference holds only for the organization specified in the ORGANIZATION\_ID column.

# MTL\_ECONOMIC\_ZONES\_B

MTL\_ECONOMIC\_ZONES\_B stores information concerning all the economic zones. This is a base table that contains one entry for every economic zone. An example of an economic zone would be EC, for European Community. Each economic zone is uniquely identified by the economic zone code, which is an internal code.

## MTL\_INTERORG\_PARAMETERS

MTL\_INTERORG\_PARAMETERS identifies the receiving organizations ("To" distribution organizations) linked to a particular organization ("From" distribution organizations). The TO\_ORGANIZATION\_ID identifies the organization that receives shipments from the organization identified by the FROM\_ORGANIZATION\_ID.

You must define the inter-organizational relationship here before you perform any inter-organization transfers in the transaction system.

INTRANSIT\_TYPE indicates whether inter-organizational transfers between the two organizations will use direct or intransit transfer.

FOB\_POINT indicates the 'Free on board' point and determines the point of transfer of liability/ownership.

Unit of measure, distance, transfer charge, and accounting information are also specified in this table.

## MTL\_ITEM\_CATEGORIES

Foreign Keys

MTL\_ITEM\_CATEGORIES stores the item assignments to categories within a category set. For each category assignment, this table stores the item, the category set, and the category. Items may be assigned to multiple categories and category sets but may be assigned to only one category in a given category set.

This table may be populated through the Master Items and Organization Items windows. It can also be populated by performing item assignments when a category set is defined. It is also populated when an item is transferred from engineering to manufacturing.

Database Triggers

Trigger Name : AX\_MTL\_ITEM\_CATEGORIES\_ARI1

Trigger Time : AFTER
Trigger Level : ROW
Trigger Event : INSERT

This trigger captures information needed to create subledger accounting events when Oracle Inventory and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger maintains data in AX\_CATEGORY\_ACCOUNTS table. It ensures that no transactions are created without a subinventory. The trigger fires right after an item is assigned to a category.

Trigger Name : AX\_MTL\_ITEM\_CATEGORIES\_ARU1

Trigger Time : AFTER

This trigger captures information needed to create subledger accounting events when Oracle Inventory and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger maintains data in AX\_CATEGORY\_ACCOUNTS table. It ensures that no transactions are created without a subinventory. The trigger fires right after an item category assignment is changed.

## MTL\_ITEM\_LOCATIONS

MTL\_ITEM\_LOCATIONS is the definition table for stock locators. The associated attributes describe which subinventory this locator belongs to, what the locator physical capacity is, etc.

The locator is a key flexfield. The Flexfield Code is MTLL.

This trigger is executed during creation of a new locator. The values in SEGMENT19 and SEGMENT20 are copied into PROJECT\_ID and TASK\_ID columns respectively. SEGMENT19 and SEGMENT20 are reserved for Oracle Project Manufacturing to store the project and task segment values in the locator flexfield.

## MTL\_ITEM\_LOC\_DEFAULTS

MTL\_ITEM\_LOC\_DEFAULTS contains the optional default locators for shipping and receiving purposes. The LOCATOR\_ID and SUBINVENTORY\_CODE identify the exact locator/subinventory which one wishes to have as default. The DEFAULT\_TYPE indicates whether it is the default shipping or receiving subinventory/locator. Also see MTL\_ITEM\_SUB\_DEFAULTS.

## MTL\_ITEM\_REVISIONS

MTL\_ITEM\_REVISIONS stores revision levels for an inventory item. When an item is defined a starting revision record is written out to this table, so every item will at least have one starting revision.

The presence of an engineering change notice code in this table indicates that the engineering system issued the revision through the implementation process. Along with the engineering change order, an implementation date and initiation date will be stored.

## MTL\_ITEM\_SUB\_DEFAULTS

MTL\_ITEM\_SUB\_DEFAULTS contains the list of optional default shipping and receiving subinventories for items in an organization. This information is used by Oracle Order Entry/Shipping and Oracle Purchasing respectively. DEFAULT\_TYPE indicates whether the subinventory is meant for default shipping or receiving.

## MTL\_ITEM\_SUB\_INVENTORIES

MTL\_ITEM\_SUB\_INVENTORIES maintains a listing of subinventories assigned to an inventory or engineering item.

These subinventories make up the list of valid subinventories when transacting this specific item and the user has specified (in the master window) that the item must use subinventories restricted to a pre-defined list.

# MTL\_LOT\_NUMBERS

MTL\_LOT\_NUMBERS stores the definition and expiration date of all lot numbers in inventory.

Since the primary key consists of LOT\_NUMBER, ORGANIZATION\_ID, and INVENTORY\_ITEM\_ID, a lot number could exist in more than one organization or for different items.

# MTL\_MANUFACTURERS

MTL\_MANUFACTURERS\_S

MTL\_MANUFACTURERS stores the definition of a manufacturer of items defined in Oracle Inventory. This information may be used to search for items by manufacturer or by manufacturer's part number.

Manufacturer part numbers for items produced by the manufacturers defined here are stored in MTL\_MFG\_PART\_NUMBERS.

## MTL MATERIAL\_TRANSACTIONS

MTL\_MATERIAL\_TRANSACTIONS stores a record of every material transaction or cost update performed in Inventory.

Records are inserted into this table either through the transaction processor or by the standard cost update program. The columns TRANSACTION\_TYPE\_ID, TRANSACTION\_ACTION\_ID, TRANSACTION\_SOURCE\_TYPE\_ID, TRANSACTION\_SOURCE\_ID and TRANSACTION\_SOURCE\_NAME describe what the transaction is and against what entity it was performed.

All accounting journal entries for a given transaction are stored in MTL\_TRANSACTION\_ACCOUNTS, joined by the column TRANSACTION ID.

If the item is under lot control then the lot records are stored in MTL\_TRANSACTION\_LOT\_NUMBERS, joined by the column TRANSACTION\_ID. If the item is under serial control then the serial records are stored in MTL\_UNIT\_TRANSACTIONS, joined by the column TRANSACTION\_ID. The Item revision and locator control are stored in the columns REVISION and LOCATOR\_ID respectively.

Transfer transactions are represented as two single records in the table. They are related through the column TRANSFER\_TRANSACTION\_ID, which contains the TRANSACTION\_ID of the other transaction in the transfer.

The index MTL\_MATERIAL\_TRANSACTIONS\_UPGD is used only during install and upgrade, and will be dropped during the course thereof, but is included here for completeness.

Sequences

# Oracle Proprietary, Confidential Information--Use Restricted by Contract

Derived Column

TRANSACTION\_ID

Trigger Name : AX\_MTL\_MAT\_TRANS\_ARI1

Trigger Time : AFTER
Trigger Level : ROW
Trigger Event : INSERT

This trigger captures information needed to create subledger accounting events when Oracle Inventory and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger captures accounting events related to Oracle Inventory cost updates. It fires right after the cost update program create a cost update for an inventory transaction. This trigger populates the AX\_EVENTS table.

Trigger Name : AX\_MTL\_MAT\_TRANS\_BRU1

Trigger Time : BEFORE
Trigger Level : ROW
Trigger Event : UPDATE

This trigger captures information needed to create subledger accounting events when Oracle Inventory and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger captures accounting events related to Oracle Inventory material transactions. It executes when the inventory transaction is processed by the cost processor. This trigger populates the AX\_EVENTS table.

Trigger Name : JA\_AU\_LOCAL\_ACCOUNTING

Trigger Time : AFTER
Trigger Level : ROW
Trigger Event : UPDATE

This trigger is on the COSTED\_FLAG column of MTL\_MATERIAL\_TRANSACTIONS. It calls a PL/SQL package to update MTL\_TRANSCATION\_ACCOUNTS.REFERENCE\_ACCOUNT with the value in MTL\_MATERIAL\_TRANSACTIONS.DISTRIBUTION\_ACCOUNT\_ID. This trigger is installed and active only if you have installed Asia/Pacific Localizations (JA).

## MTL\_MATERIAL\_TRANSACTIONS\_TEMP

MTL\_MATERIAL\_TRANSACTIONS\_TEMP is the gateway for all material transactions.

Records are processed from this table into Inventory through the transaction processor. All Inventory transaction forms write directly to this table. Outside applications must write transaction records to MTL\_TRANSACTIONS\_INTERFACE to be processed through MTL\_MATERIAL\_TRANSACTIONS\_TEMP and the transaction processor by the Transaction Worker concurrent program.

Lots and serial numbers for a

MTL\_MATERIAL\_TRANSACTIONS\_TEMP(MMTT) record are stored in the tables MTL\_TRANSACTION\_LOTS\_TEMP(MTLT) and MTL\_SERIAL\_NUMBERS\_TEMP(MSNT). If the item is under lot control, then MMTT.TRANSACTION\_TEMP\_ID joins to MTLT.TRANSACTION\_TEMP\_ID. If the item is also under serial number control, then MTLT.SERIAL\_TRANSACTION\_TEMP\_ID joins to MSNT.TRANSACTION\_TEMP\_ID. If the item is only under serial number control, then MMTT.TRANSACTION\_TEMP\_ID joins to MSNT.TRANSACTION\_TEMP\_ID.

Transfer transactions are stored in this table as a single record. The transaction processor creates two transactions from the single record.

### MTL\_MFG\_PART\_NUMBERS

MTL\_MFG\_PART\_NUMBERS stores the cross reference between an item defined in Oracle Inventory and the part number used by its manufacturer. This information can be used to perform item searches by manufacturer part number.

Manufacturer part number references are defined for an item in the item master organization.

## MTL\_ONHAND\_QUANTITIES

Foreign Keys

MTL\_ONHAND\_QUANTITIES stores quantity on hand information by control level and location.

MTL\_ONHAND\_QUANTITIES is maintained as a stack of receipt records, which are consumed by issue transactions in FIFO order. The quantity on hand of an item at any particular control level and location can be found by summing TRANSACTION\_QUANTITY for all records that match the criteria. Note that any transactions which are committed to the table MTL\_MATERIAL\_TRANSACTIONS\_TEMP are considered to be played out as far as quantity on hand is concerned in Inventory transaction forms. All our Inquiry forms and ABC compile are only based on MTL\_ONHAND\_QUANTITIES.

MTL\_ONHAND\_QUANTITIES has two columns, CREATE\_TRANSACTION\_ID and UPDATE\_TRANSACTION\_IDs to join to MTL\_MATERIAL\_TRANSACTIONS.TRANSACTION\_ID the transactions that created the row and the transaction that last updated a row.

### MTL\_PARAMETERS

MTL\_PARAMETERS maintains a set of default options like general ledger accounts; locator, lot, and serial controls; inter–organization options; costing method; etc. for each organization defined in Oracle Inventory.

Each organization's item master organization (MASTER\_ORGANIZATION\_ID) and costing organization (COST\_ORGANIZATION\_ID) are maintained here.

You specify which manufacturing calendar the organization will use (CALENDAR\_CODE), as well as the set of exceptions to this calendar (CALENDAR\_EXCEPTION\_SET\_ID).

NEGATIVE\_INV\_RECEIPT\_CODE indicates whether this organization will allow negative balances in inventory. It is used in the transaction system to ensure, for example, that you do not over—issue a particular item (if you have indicated that negative balances are not allowed).

For lot number and serial number auto-generation, you can specify whether you want the numbers generated from defaults defined at the organization level or the item level

(LOT\_NUMBER\_GENERATION, SERIAL\_NUMBER\_GENERATION). You can also specify uniqueness constraints for lot numbers (LOT\_NUMBER\_UNIQUENESS) and serial numbers (SERIAL\_NUMBER\_TYPE).

Among the accounting defaults that can be defined here are valuation accounts, receiving accounts, profit and loss accounts, and interorganization transfer accounts.

#### Database Triggers

3 - 192

Trigger Name : AX\_MTL\_PARAMETERS\_ARDI1
Trigger Time : AFTER
Trigger Level : ROW

Trigger Event : INSERT, DELETE

This trigger captures information needed to create subledger accounting events when Oracle Inventory and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger ensures that an INTRANS subinventory exists for every inventory organizations. If it does not exist, the subinventory will be created in the table, MTL\_SECONDARY\_INVENTORY.

#### MTL\_RELATED\_ITEMS

MTL\_RELATED\_ITEMS stores the relationships between items. All relationships are defined within the item master organization. Item relationships may be used to search for related and substitute items. Items defined with a substitute relationship to a given item may be received in place of the ordered item when substitutes are allowed.

RELATIONSHIP\_TYPE\_ID indicates whether the relationship is a 'Substitute' or 'Related' relationship.

RECIPROCAL\_FLAG indicates whether the relationship is reciprocal. Defining the relationship as reciprocal has the same effect as defining two separate relationships.

The view, MTL\_RELATED\_ITEMS\_VIEW, explodes the reciprocal relationships and may be used to view all item relationships regardless of how they are defined.

### MTL\_SECONDARY\_INVENTORIES

MTL\_SECONDARY\_INVENTORIES is the definition table for the subinventory. A subinventory is a section of inventory, i.e., raw material, finished goods, etc. Subinventories are assigned to items (in a many to one relationship), indicating a list of valid places where this item will physically exist in inventory.

Other attributes include general ledger accounts, demand picking order, locator type, availability type, and reservable type.

You can also specify whether this subinventory is an expense or asset subinventory (ASSET\_INVENTORY), or whether quantities are tracked (QUANTITY\_TRACKED).

#### Database Triggers

3 - 198

Trigger Name : AX\_MTL\_SEC\_INVENTORY\_ARDI1

Trigger Time : AFTER
Trigger Level : ROW

Trigger Event : INSERT, DELETE

This trigger captures information needed to create subledger accounting events when Oracle Inventory and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger synchronizes the table MTL\_SECONDARY\_INVENTORIES and AX\_SECONDARY\_INVENTORIES. It ensure that a subinventory exists for every inventory organizations in AX\_SECONDARY\_INVENTORIES.

### MTL\_SECONDARY\_LOCATORS

MTL\_SECONDARY\_LOCATORS stores all locators within a subinventory for a specific item.

These locators make up the valid list of locators when transacting that specific item to/from the subinventory, and the user has specified (in the Master Item window) that the item must use locators restricted to a pre-defined list.

### MTL\_SERIAL\_NUMBERS

MTL\_SERIAL\_NUMBERS stores the definition and current status of all serial numbers in Oracle Inventory. These serial numbers are also used in other areas of Oracle Manufacturing.

A serial number can have one of four statuses:

- · Defined but not used
- Resides in stores
- Issued out of stores
- Resides in intransit

The serial generation program populates this table, given the number of serial numbers to create and the starting number and prefix.

#### MTL\_SERIAL\_NUMBERS\_TEMP

MTL\_SERIAL\_NUMBERS\_TEMP holds temporary serial number transaction records for a parent record in

MTL\_MATERIAL\_TRANSACTIONS\_TEMP. Data in this table will eventually reside in MTL\_UNIT\_TRANSACTIONS after processing by the transaction processor. TRANSACTION\_TEMP\_ID joins to TRANSACTION\_TEMP\_ID in

MTL\_MATERIAL\_TRANSACTIONS\_TEMP when under serial control. If also under lot control it joins to

MTL\_TRANSACTION\_LOTS\_TEMP.SERIAL\_TRANSACTION\_TEMP\_ID.

It is possible to have child records in this table without a parent record due to the autocommit feature of the Serial Number Entry form.

Periodic deletion of irrelevant data from this table is desired.

#### MTL\_SUPPLY

MTL\_SUPPLY stores incoming supply information for an organization. This table forms one of the sources in Inventory's Demand–Supply form. There are four different types of supply captured in this table:

- 1) Approved Requisitions
- 2) Approved Purchase orders
- 3) Shipments from suppliers
- 4) Intransit shipments from another organization

Types 3 and 4 could be distinguished by the presence of data in the INTRANSIT\_OWNING\_ORGANIZATION\_ID column, which identifies the ownership of the items in intransit. If this column is null then it means that the shipment supply is from a Vendor.

This information is used by the available to promise routine to derive the ATP information as appropriate. Quantities of items in intransit are also kept track of in the table.

Records in MTL\_SUPPLY are created every time you approve a requisition or a PO or create an intransit shipment. One record of REQ type will be created for one requisition line when the requisition is approved. One record of PO type will be created per PO distribution when a PO is approved and one record per shipment line will be created when a shipment is created.

Records in MTL\_SUPPLY will be recreated whenever there are transactions such as return to receiving, return to vendor or cancellation of purchase orders.

Records in MTL\_SUPPLY are deleted every time you change the document status to not approved. For example, a PO would require approval if you change the line and shipment quantity. If such a PO is re-approved then the PO supply will be recreated for the new quantity.

The supply type code of a REQ supply record is changed to PO every time a requisition is autocreated. Similarly the supply type code is changed from PO to RECEIVING when a PO is fully received. If a PO is partially received then a supply with the supply type code of RECEIVING will be created for the quantity received. When the receipt is delivered the RECEIVING supply is deleted. SHIPMENT supply works in the same way as PO supply.

There is a database trigger on MTL\_SUPPLY with the name MTL\_SUPPLY\_T. This trigger fires on insert, update or deletion of

# records in MTL\_SUPPLY. It inserts records into MRP\_RELIEF\_INTERFACE table.

#### Database Triggers

Trigger Name : MTL\_SUPPLY\_T

Trigger Time : BEFORE Trigger Level : ROW

Trigger Event : INSERT, UPDATE, DELETE

This trigger inserts rows into MRP\_RELIEF\_INTERFACE table. This information is used by the planning manager to relieve MPS planned orders or provide feedback for MRP planned orders. It fires on insert, update and delete of rows in MTL\_SUPPLY.

A new row is inserted only if the columns EXPECTED\_DELIVERY\_DATE, ITEM\_ID, TO\_ORGANIZATION\_ID, TO\_ORG\_PRIMARY\_QUANTITY are not null.

The TRANSACTION\_ID column in MRP\_RELIEF\_INTERFACE table is populated using the sequence MRP\_RELIEF\_INTERFACE\_S.

## MTL\_SYSTEM\_ITEMS\_B

MTL\_SYSTEM\_ITEMS\_B is the definition table for items. This table holds the definitions for inventory items, engineering items, and purchasing items. You can specify item-related information in fields such as:Bill of Material, Costing, Purchasing, Receiving, Inventory, Physical attributes, General Planning, MPS/MRP Planning, Lead times, Work in Process, Order Entry, and Invoicing.

You can set up the item with multiple segments, since it is implemented as a flexfield. Use the standard 'System Items' flexfield that is shipped with the product to configure your item flexfield. The flexfield code is MSTK.

The primary key for an item is the INVENTORY\_ITEM\_ID and ORGANIZATION\_ID. Therefore, the same item can be defined in more than one organization.

Each item is initially defined in an item master organization. The user then assigns the item to other organizations that need to recognize this item; a row is inserted for each new organization the item is assigned to.

Many columns such as MTL\_TRANSACTIONS\_ENABLED\_FLAG and BOM\_ENABLED\_FLAG correspond to item attributes defined in the MTL\_ITEM\_ATTRIBUTES table. The attributes that are available to the user depend on which Oracle applications are installed. The table MTL\_ATTR\_APPL\_DEPENDENCIES maintains the relationships between item attributes and Oracle applications.

Two unit of measure columns are stored in MTL\_SYSTEM\_ITEMS table. PRIMARY\_UOM\_CODE is the 3-character unit that is used throughout Oracle Manufacturing. PRIMARY\_UNIT\_OF\_MEASURE is the 25-character unit that is used throughout Oracle Purchasing.

Items now support multilingual description. MLS is implemented with a pair of tables: MTL\_SYSTEM\_ITEMS\_Band MTL\_SYSTEM\_ITEMS\_TL. Translations table (MTL\_SYSTEM\_ITEMS\_TL) holds item descriptions in multiple languages. DESCRIPTION column in the base table (MTL\_SYSTEM\_ITEMS\_B) is for backward compatibility and is maintained in the installation base language only.

ENGINEERING_ITEM_ID	NULL	NUMBER	Engineering implemented item identifier
ENGINEERING_DATE	NULL	DATE	Engineering implementation date
SERVICE_STARTING_DELAY	NULL	NUMBER	Days after shipment that service begins
VENDOR_WARRANTY_FLAG	NOT NULL	VARCHAR2(1)	Flag indicating service for the item is provided by a supplier
SERVICEABLE_COMPONENT_FLAG	NULL	VARCHAR2(1)	Indicates whether the item is serviceable by other service-type items and whether it can be referenced as the component of another item
SERVICEABLE_PRODUCT_FLAG	NOT NULL	VARCHAR2(1)	Indicates whether the item is serviceable by other service-type items and can have service requests reported against it
BASE_WARRANTY_SERVICE_ID	NULL	NUMBER	Base warranty identifier
PAYMENT_TERMS_ID	NULL	NUMBER	Payment terms identifier
PREVENTIVE_MAINTENANCE_FLAG	NULL	VARCHAR2(1)	Flag indicating whether item can be a preventive maintenance service item
PRIMARY_SPECIALIST_ID	NULL	NUMBER	Primary service specialist
SECONDARY_SPECIALIST_ID	NULL	NUMBER	Secondary service specialist
SERVICEABLE_ITEM_CLASS_ID	NULL	NUMBER	Serviceable item class identifier
TIME_BILLABLE_FLAG	NULL	VARCHAR2(1)	Flag indicating service labor hours are billable
MATERIAL_BILLABLE_FLAG	NULL	VARCHAR2(30)	Flag indicating service material is billable
EXPENSE_BILLABLE_FLAG	NULL	VARCHAR2(1)	Flag indicating service expenses are billable

Name	Null?	Туре	Description
PRORATE_SERVICE_FLAG	NULL	VARCHAR2(1)	Flag indicating cost of service may be prorated
COVERAGE_SCHEDULE_ID	NULL	NUMBER	Coverage schedule identifier
SERVICE_DURATION_PERIOD_CODE	NULL	VARCHAR2(10)	Period code for default service duration
SERVICE_DURATION	NULL	NUMBER	Default service duration
WARRANTY_VENDOR_ID	NULL	NUMBER	Service supplier identifier
MAX_WARRANTY_AMOUNT	NULL	NUMBER	Monetary value of service costs covered by the item
RESPONSE_TIME_PERIOD_CODE	NULL	VARCHAR2(30)	Period code for service response time
RESPONSE_TIME_VALUE	NULL	NUMBER	Default response time
NEW_REVISION_CODE	NULL	VARCHAR2(30)	Indicates how to notify customers of new revisions of the item
INVOICEABLE_ITEM_FLAG	NOT NULL	VARCHAR2(1)	Flag indicating item may appear on invoices
TAX_CODE	NULL	VARCHAR2(50)	Tax code
INVOICE_ENABLED_FLAG	NOT NULL	VARCHAR2(1)	Indicates whether the item can be invoiced
MUST_USE_APPROVED_VENDOR_FLAG	NOT NULL	VARCHAR2(1)	Flag indicating purchases restricted to approved supplier

PROGRAM_APPLICATION_ID	NULL	NUMBER	Standard Who column
PROGRAM_ID		NUMBER	Standard Who column
PROGRAM_UPDATE_DATE		DATE	Standard Who column
OUTSIDE_OPERATION_FLAG	NOT NULL	VARCHAR2(1)	Flag indicating item may appear on outside operation purchase order
OUTSIDE_OPERATION_UOM_TYPE	NULL	VARCHAR2(25)	Outside operation unit of measure
SAFETY_STOCK_BUCKET_DAYS	NULL	NUMBER	Safety stock bucket days
AUTO_REDUCE_MPS	NULL	NUMBER (22)	Automatically deletes MPS entries within a time period
COSTING_ENABLED_FLAG	NOT NULL	VARCHAR2(1)	Flag indicating cost information is maintained
AUTO_CREATED_CONFIG_FLAG	NOT NULL	VARCHAR2(1)	Flag indicating configuration item automatically created
CYCLE_COUNT_ENABLED_FLAG	NOT NULL	VARCHAR2(1)	Flag indicating item may be cycle counted
ITEM_TYPE	NULL	VARCHAR2(30)	User-defined item type
MODEL_CONFIG_CLAUSE_NAME		VARCHAR2(10)	(not currently used)
SHIP_MODEL_COMPLETE_FLAG	NULL	VARCHAR2(1)	Flag indicating model must be complete to ship
MRP_PLANNING_CODE		NUMBER	MRP Planning option
RETURN_INSPECTION_REQUIREMENT		NUMBER	RMA inspection requirement
ATO_FORECAST_CONTROL	NULL	NUMBER	Type of forecast control for ATO
RELEASE_TIME_FENCE_CODE		NUMBER	Flag to indicate if this item is auto releasable by MRP
RELEASE_TIME_FENCE_DAYS	NULL	NUMBER	Number of days within which this item should be auto released
CONTAINER_ITEM_FLAG	NULL	VARCHAR2(1)	Flag indicating if the item is a container. Used for shipping sales orders
VEHICLE_ITEM_FLAG	NULL	VARCHAR2(1)	Indicates if the item is a vehicle or not. Used for shipping sales orders

Name	Null?	Type	Description
MAXIMUM_LOAD_WEIGHT	NULL	NUMBER	Maximum load weight of a container or a vehicle that can be used for shipping sales orders
MINIMUM_FILL_PERCENT	NULL	NUMBER	Minimum fill condition under which the container or vehicle should be used
CONTAINER_TYPE_CODE	NULL	VARCHAR2(30)	Container type code for container items. Container types are user defineable
INTERNAL_VOLUME	NULL	NUMBER	Internal volume for container items. Used by Shipping to calculate container capacity restrictions
WH_UPDATE_DATE	NULL	DATE	Warehouse update date for tracking changes relevant to data collected in Data Warehouse
PRODUCT_FAMILY_ITEM_ID	NULL	NUMBER	If the item is product family member, stores the product family identifier. Used in Production Planning
GLOBAL_ATTRIBUTE_CATEGORY	NULL	VARCHAR2(150)	Global descriptive flexfield structure defining column
GLOBAL_ATTRIBUTE1	NULL	VARCHAR2(150)	Global descriptive flexfield segment

Database Triggers

Trigger Name : MTL\_SYSTEM\_ITEMS\_T6\_BOM

Trigger Time : AFTER
Trigger Level : ROW
Trigger Event : INSERT

This trigger creates categories corresponding to product family items being created. It also assigns product family items to their corresponding categories. The trigger uses data that has been stored in the BOM\_PFI\_PVT package PL/SQL tables by the row level trigger.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T1\_BOM

Trigger Time : BEFORE Trigger Level : ROW Trigger Event : INSERT

This trigger stores product family item identifier used later by the statement level trigger for creation of the corresponding category when a new product family item is defined. It makes calls to the BOM\_PFI\_PVT package procedures.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T2\_BOM

Trigger Time : BEFORE Trigger Level : ROW Trigger Event : DELETE

This trigger stores corresponding category identifier that is used later by the statement level trigger for deletion of the category when the product family item is deleted. It makes calls to BOM\_PFI\_PVT package procedures.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T3\_BOM

Trigger Time : BEFORE
Trigger Level : ROW
Trigger Event : UPDATE

This trigger performs the following functions depending on conditions: 1. Creates product family category when item attribute BOM\_ITEM\_TYPE is updated to 5. 2. When the item attribute BOM\_ITEM\_TYPE is changed from 5 to any other value, the trigger stores corresponding category identifier for later deletion of the category by the statement level trigger. 3. Removes an item assignment to the corresponding product family category when the PRODUCT\_FAMILY\_ITEM\_ID column of that item is changed. 4. When the PRODUCT\_FAMILY\_ITEM\_ID column is changed to non-null, stores category ID in the BOM\_FFI\_PVT package PL/SQL table for an item assignment to that category later by the statement-level trigger.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T4\_BOM

Trigger Time : AFTER
Trigger Level : STATEMENT
Trigger Event : UPDATE

This trigger performs the following functions depending on updates of the BOM\_ITEM\_TYPE and PRODUCT\_FAMILY\_ITEM\_ID columns: 1. Creates categories corresponding to product family items. 2. Assigns new product family items to their corresponding categories. 3. Deletes product family categories. The trigger uses data that has been stored in the BOM\_PFI\_PVT package PL/SQL tables by the row level trigger.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T5\_BOM

Trigger Time : AFTER
Trigger Level : ROW
Trigger Event : DELETE

This trigger deletes categories corresponding to product family items being deleted. The trigger uses data that has been stored in the BOM\_PFI\_PVT package PL/SQL tables by the row level trigger.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T2\_VEH

Trigger Time : AFTER
Trigger Level : ROW
Trigger Event : UPDATE

This trigger exports Automotive specific Item data to CARAS to maintain data consistency whenever data in Oracle is changed. It calls the Automotive export launcher procedure which validates the Automotive specific data before it exports it to CARAS.

Item data comes from the following tables

ECE\_TP\_GROUP
ECE\_TP\_DETAILS
MTL\_SYSTEM\_ITEMS
MTL\_CUSTOMER\_ITEMS
MTL\_CUSTOMER\_ITEM\_XREFS
VEH\_MTL\_CUSTOMER\_ITEMS
WSH\_CONTAINER\_LOAD

The above tables have triggers to export Item data to CARaS.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T1

Trigger Time : BEFORE Trigger Level : ROW Trigger Event : UPDATE

The trigger is executed when the COSTING\_ENABLED\_FLAG field in the MTL\_SYSTEM\_ITEMS table is modified from Yes to No or vice versa. Before updating COSTING\_ENABLED\_FLAG field, the trigger performs the following tasks for each record that is modified:

Insert a record into CST\_ITEM\_COSTS table if COSTING\_ENABLED\_FLAG field is changed from No to Yes.

Delete a record from CST\_ITEM\_COSTS table if COSTING\_ENABLED\_FLAG field is changed from Yes to No.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T6\_ICX

Trigger Time : AFTER
Trigger Level : ROW
Trigger Event : INSERT

This trigger places a re-index request on the ConText queue. The trigger is installed via a post-install step for Web Requisitions and is required only if this module is used. There is a prerequisite that ConText be installed.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T7\_ICX

Trigger Time : AFTER
Trigger Level : ROW
Trigger Event : UPDATE

This trigger places a re-index request on the ConText queue. The trigger is installed via a post-install step for Web Requisitions and is required only if this module is used. There is a prerequisite that ConText be installed.

Trigger Name : MTL\_SYSTEM\_ITEMS\_T8\_ICX

Trigger Time : AFTER
Trigger Level : ROW
Trigger Event : DELETE

This trigger places a re-index request on the ConText queue. The trigger is installed via a post-install step for Web Requisitions and is required only if this module is used. There is a prerequisite that ConText be installed.

## MTL\_TRANSACTION\_ACCOUNTS

MTL\_TRANSACTION\_ACCOUNTS holds the accounting information for each material transaction in MTL\_MATERIAL\_TRANSACTIONS. Oracle Inventory uses this information to track the financial impact of your quantity moves.

The two tables are joined by the TRANSACTION\_ID, and in most instances, there are at least two account rows for every material transaction. For some transactions, such as expense items or expense subinventories, you may not have any accounting. You should not join these two tables by ORGANIZATION\_ID because inter-organizations transfers occur across organizations.

Each row in this table represents a debit or credit accounting entry, and the sum of all rows for a given transaction identifier should be zero. Each row includes the account, transaction date, transaction value, purpose (ACCOUNTING\_LINE\_TYPE), and the source of the charges (TRANSACTION SOURCE TYPE ID).

The TRANSACTION\_VALUES and BASE\_TRANSACTION\_VALUES are transferred to the GL\_INTERFACE\_TABLE through the period close or GL transfer process, and until this process is run, the GL\_BATCH\_ID is –1.

The index MTL\_TRANSACTION\_ACCOUNTS\_N2 is used only during install and upgrade, and will be dropped during the course thereof, but is included here for completeness. The index is named such to coincide with the equivalent index in R9.

#### Database Triggers

Trigger Name : AX\_MTL\_TRANS\_ACCOUNTS\_BRI1

Trigger Time : BEFORE Trigger Level : ROW Trigger Event : INSERT

This trigger captures information needed to create subledger accounting events when Oracle Inventory and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger prevents an inventory transaction from being posted twice to GL, once in Global Accounting Engine and again by Oracle Inventory.

## MTL\_TRANSACTION\_LOTS\_TEMP

MTL\_TRANSACTION\_LOTS\_TEMP stores lot number information for transactions in the MTL\_MATERIAL\_TRANSACTIONS\_TEMP table.

Many lot number records may be specified for a given transaction record. TRANSACTION\_TEMP\_ID joins to TRANSACTION\_TEMP\_ID in MTL\_MATERIAL\_TRANSACTIONS\_TEMP.

SERIAL\_TRANSACTION\_TEMP\_ID joins to TRANSACTION\_TEMP\_ID in MTL\_SERIAL\_NUMBERS\_TEMP when also under serial control

It is possible to have child records in this table without a parent record due to the autocommit feature of the Lot Entry window. Periodic deletion of irrelevant data from this table is desired.

## MTL\_UNITS\_OF\_MEASURE\_TL

MTL\_UNITS\_OF\_MEASURE\_TL is the definition table for both the 25-character and the 3-character units of measure. The base\_uom\_flag indicates if the unit of measure is the primary unit of measure for the uom\_class. Oracle Inventory uses this table to keep track of the units of measure used to transact an item. This table is also used by Oracle Purchasing, Oracle Order Management and Oracle Shipping Execution.

## MTL\_UOM\_CONVERSIONS

MTL\_UOM\_CONVERSIONS stores conversion rates between non-base units of measure and their base unit. The non-base units of measure are stored in the table.

The default\_conversion\_flag indicates that the conversion being defined is 1) associated with a specific item and 2) the conversion between units of measure has already been defined as a standard conversion with the same conversion rate.

## ORG\_ACCT\_PERIODS

ORG\_ACCT\_PERIODS holds the open and closed financial periods for organizations. When a period is opened, the period open form (INVTTGPO) pulls in the next available period from the GL table GL\_PERIODS. ORG\_ACCT\_PERIODS holds the relevant data, such as period start, end and close dates. Note that only postable periods will be brought over. You may create non-postable periods in Oracle General Ledger or in the GL forms provided with Oracle Inventory. If data exists in the PERIOD\_CLOSE\_DATE column, then the period has been closed and no more transactions can be made against the closed period. The combination of the PERIOD\_CLOSE\_DATE and OPEN\_FLAG columns reflects the status of a period. When OPEN\_FLAG = 'P', it means the period close is processing. When it equals 'N', the period close process is completed. When OPEN\_FLAG is 'Y' and PERIOD\_CLOSE\_DATE is null, it means the period is open. Otherwise, it implies the period close process has failed.

# ORG\_FREIGHT\_TL

ORG\_FREIGHT is the definition table for freight carriers. It also holds the distribution account information.

The freight carrier (FREIGHT\_CODE) and freight charge distribution account (DISTRIBUTION\_ACCOUNT) are used in inter–organization transfers.

Freight carriers are defined in the Freight Carriers window in Oracle Inventory.

## PA\_PROJECTS\_ALL

PA\_PROJECTS\_ALL stores the highest units of work defined in Oracle Projects at which funding can be allocated and at which revenue, invoices, unbilled receivables, and unearned revenue are generated and maintained. At the project level, users can specify the methods to be used for revenue accrual and billing, and the invoice formats to be used for invoicing. A project is broken down into one or more tasks. All projects can be funded by one or more agreements.

# PA\_TASKS

PA\_TASKS stores user-defined subdivisions of project work. Tasks can be broken down into multiple levels of subtasks. The depth and width of the work breakdown structure (WBS) is unlimited.

The WBS is held using the TASK\_ID and PARENT\_TASK\_ID columns. Two columns related to the WBS are denormalized: TOP\_TASK\_ID and WBS\_LEVEL.

#### Database Triggers

Trigger Name : PA\_ADW\_TASKS\_T1

Trigger Time : BEFORE Trigger Level : ROW Trigger Event : UPDATE

This trigger maintains the ADW\_NOTIFY\_FLAG column for any updates to TOP\_TASK\_ID, DESCRIPTION, TASK\_NUMBER, TASK\_NAME, CARRYING\_OUT\_ORGANIZATION\_ID, SERVICE\_TYPE\_CODE and PROJECT\_ID columns. If the service\_type\_code or the carrying\_out\_organization\_id is changed then it creates a record in PA\_TASK\_HISTORY table also.

Trigger Name : PA\_ADW\_TASKS\_T2

Trigger Time : BEFORE
Trigger Level : ROW
Trigger Event : INSERT

This trigger creates a new record into the  $PA\_TASK\_HISTORY$  table for new records created in  $PA\_TASKS$  table.

## POA\_BIS\_SAVINGS

This table contains data used to view purchase details and analysis based on contracts. Contract purchases are those that reference a blanket or release purchase order. Contract, non–contract, and potential savings are calculated to determine performance and savings opportunities. Data within this table is used for Purchasing Intelligence: for the Purchases, Contract Leakage, and Contract Savings reports, and the Contract Savings Discoverer workbook.

## **PO\_ACCEPTANCES**

T----

PO\_ACCEPTANCES contains information about purchase order acceptances or follow-ups you receive from your suppliers. Each row in this table corresponds to a specific revision of a purchase order or release you sent to a supplier. You can define as many rows as you want in this table for a revision of a purchase order or release.

Oracle Purchasing uses this table to store descriptive information about the supplier acceptance or follow–up. Oracle Purchasing determines that a supplier accepted a purchase order or release if the value ACCEPTED\_FLAG is 'Y'.

You enter acceptances using the Acceptances window.

## PO\_ACCRUAL\_RECONCILE\_TEMP\_ALL

PO ACCRUAL RECONCILE TEMP ALL is a temporary table that Oracle Purchasing uses to generate the Accrual Reconciliation Report. Oracle Purchasing can delete all records in this table when you run the report. Oracle Purchasing inserts one row in this table for each purchase order shipment, invoice, or receipt that you charged to the Accounts Payable Accrual Account for your inventory organization each time you run the Accrual Reconciliation report. Depending on your installation, this temporary table may hold accrual transactions from Oracle Payables, Oracle Purchasing, Oracle Inventory or Oracle Work in Process, for the following accounting tables: AP INVOICE DISTRIBUTIONS, RCV RECEIVING SUB LEDGER, MTL TRANSACTION ACCOUNTS and WIP\_TRANSACTION ACCOUNTS. These transactions usually are purchase order receipts and invoices, but may include transactions that use an A/P Accrual Account that are unrelated to a purchase order. This table as no primary key.

# PO\_ACCRUAL\_WRITE\_OFFS\_ALL

Foreign Keys

PO ACCRUAL WRITE OFFS ALL holds the accounts payable write-offs, created by the Accrual Write-Offs window. You may write off and reverse a write-off at any time. You never change or remove an existing row, you always add more rows. The Accrual Reconciliation Report can exclude written-off transactions, since the underlying table, PO\_ACCRUAL\_RECONCILE\_TEMP\_ALL has the WRITE\_OFF\_ID, which is the unique identifier for the PO\_ACCRUAL\_WRITE\_OFFS\_ALL table.

# PO\_ACTION\_HISTORY

PO\_ACTION\_HISTORY contains information about the approval and control history of your purchasing documents. There is one record in this table for each approval or control action an employee takes on a purchase order, purchase agreement, release, or requisition. Each row includes references to the document itself, the employee who acted on the document, the date of the action, the type of action taken on the document, and a note each employee can leave when taking an action on the document.

Oracle Purchasing uses this information to display history information about documents and to forward documents in the approval process to the appropriate employee.

# **PO\_AGENTS**

PO\_AGENTS contains information about buyers and purchasing managers. You need one row for each employee who has purchasing responsibilities in your organization. You define a buyer by entering a default Item Category and Ship–To Location.

Oracle Purchasing uses this information to determine active buyers and to provide defaults in the Find Requisitions Lines window. When creating a purchase order, you can use the list of values to choose a buyer you defined in this table.

You enter buyer information in the Buyers window.

The primary key AGENT\_ID has the same value as the EMPLOYEE\_ID in the HR\_EMPLOYEES view for the corresponding employee.

This Technical Reference Manual (TRM) in any form, software or printed matter, contains proprietary information of Oracle Corporation; it is provided under an Oracle Corporation agreement containing restrictions on use and disclosure and is also protected by copyright, patent, and other intellectual property law. Restrictions applicable to this TRM include, but are not limited to: (a) exercising either the same degree of care to safeguard the confidentiality of your own most important Confidential Information or a reasonable degree of care, whichever is greater; (b) maintaining agreements with your employees and agents that protect the Confidential Information of third parties such as Oracle Corporation and instructing such employees and agents of these requirements for this TRM; (c) restricting disclosure of this TRM to those of your employees who have a "need to know" consistent with the purposes for which this TRM was disclosed to you; (d) maintaining this TRM at all times on your premises; (e) not removing or destroying any proprietary or confidential legends or markings placed upon this TRM in whatever form, software or printed matter; and (f) not reproducing or transmitting this TRM in any form or by any means, electronic or mechanical, for any purpose, without the express written permission of Oracle Corporation. You should not use this TRM in any form, software or printed matter, to create software that performs the same or similar functions as any Oracle Corporation products.

The information in this TRM is subject to change without notice. If you find any problems in the TRM in any form, software or printed matter, please report them to us in writing. Oracle Corporation does not warrant that this TRM is error-free. This TRM is provided to customer "as-is" with no warranty of any kind. This TRM does not constitute Documentation as that term is defined in Oracle's agreements.

Reverse engineering of the Programs (software and documentation) associated with this TRM are prohibited. The Programs associated with this TRM are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be licensee's responsibility to take all appropriate fail–safe, back–up, redundancy and other measures to ensure the safe use of such applications if the Programs are used for such purposes, and Oracle disclaims liability for any damages caused by such use of the Programs.

#### Restricted Rights Legend

# PO\_CONTROL\_FUNCTIONS

PO\_CONTROL\_FUNCTIONS contains information describing the actions that can be performed on a particular document type. Oracle Purchasing uses these control functions to restrict who can do what to a document. There is one row for each combination of document type and action.

#### PO\_CONTROL\_GROUPS\_ALL

PO\_CONTROL\_GROUPS\_ALL contains information about the control groups you use in your business. There is one row in this table for each control group you define. A control group corresponds to a specific level of authorization in your organization. Each control group defines the restrictions that can be applied to a control function and consequently to a Job or Position. You can assign the same control group to many functions. You assign control groups to a control function and define the job or position to which they apply.

#### PO\_CONTROL\_RULES

PO\_CONTROL\_RULES contains information about the rules that you can use to restrict document approval. Control rules can apply to different data objects. Control rules can be defined for:

- Items
- Accounting Flexfields
- Item Categories
- Locations
- Document Total

Each rule applies to one object and occupies one row. Each row contains either a valid account flexfield range, item flexfield range, item category flexfield range, ship-to/deliver-to location, or document total.

#### PO DISTRIBUTIONS ALL

PO\_DISTRIBUTIONS\_ALL contains accounting distribution information for apurchase order shipment line. You need one row for each distribution line you attach to a purchase order shipment. There are four types of documents using distributions in Oracle Purchasing:

- Standard Purchase Orders
- Planned Purchase Orders
- Planned Purchase Order Releases
- Blanket Purchase Order Releases

Each row includes the destination type, requestor ID, quantity ordered and deliver–to location for the distribution. Oracle Purchasing uses this information to record accounting and requisition information for purchase orders and releases.

PO\_DISTRIBUTIONS\_ALL is one of five tables storing purchase order and release information.

Some columns in PO\_DISTRIBUTIONS\_ALL contain information only if certain conditions exist:

- If you autocreate this accounting distribution from a requisition, REQ\_DISTRIBUTION\_ID corresponds to the ID of the requisition distribution you copy on the purchase order.
- If you use a foreign currency on your purchase order, Oracle Purchasing stores currency conversion information in RATE and RATE DATE.
- If you use encumbrance, GL\_ENCUMBERED\_DATE and GL\_ENCUMBERED\_PERIOD\_NAME contain encumbrance information Oracle Purchasing uses to create journal entries in Oracle General Ledger.
- If you do not autocreate the purchase order from online requisitions, REQ\_LINE\_REFERENCE\_NUM and REQ\_HEADER\_REFERENCE\_NUM contain the requisition number and requisition line number of the corresponding paper requisition. These two columns are not foreign keys to another table.
- If the distribution corresponds to a blanket purchase order release, PO RELEASE ID identifies this release.
- If SOURCE\_DISTRIBUTION\_ID has a value, the distribution is part of a planned purchase order release.

 If you cancel the distribution, Oracle Purchasing automatically updates QUANTITY\_CANCELLED or GL\_CANCELLED\_DATE. Oracle Purchasing also enters UNENCUMBERED\_AMOUNT if you use encumbrance.

You enter distribution information in the Distributions window, accessible through the Purchase Orders and Releases windows.

#### Database Triggers

Trigger Name : PO\_MRC\_DISTRIBUTIONS\_BIUD

Trigger Time : BEFORE Trigger Level : ROW

Trigger Event : INSERT, UPDATE, DELETE

This MRC trigger only exists when you install the Multiple Reporting Currencies feature. It is executed when you perform an insert, update, or delete statement on the table PO\_DISTRIBUTIONS\_ALL. For each record being inserted/updated/deleted in PO\_DISTRIBUTIONS\_ALL, this trigger inserts/updates/deletes corresponding reporting currency records in the MRC subtable, PO\_MC\_DISTRIBUTIONS. In addition, this trigger also populates the MRC VARCHAR2 columns in PO\_DISTRIBUTIONS\_ALL.

#### PO\_DISTRIBUTIONS\_ARCHIVE\_ALL

PO\_DISTRIBUTIONS\_ARCHIVE\_ALL contains archived distribution information. Oracle Purchasing only archives distributions for the following documents:

- Standard purchase orders
- Planned purchase orders
- Planned purchase order releases
- Blanket purchase order releases

When you modify a distribution, Oracle Purchasing will archive it after you (re)approve the purchase order or after you print it (this depends on the purchasing system options). You can retrieve revisions of the distributions using this table.

The latest archived revision will have LATEST\_EXTERNAL\_FLAG set to 'Y'.

You need one row for each distribution archive. Each row contains the same information as the PO\_DISTRIBUTIONS\_ALL table. Oracle Purchasing uses this information to ensure you keep copies of your legal documents.

#### PO\_EMPLOYEE\_HIERARCHIES\_ALL

PO\_EMPLOYEE\_HIERARCHIES\_ALL contains information about the relationship of an employee to all his supervisors in a particular position hierarchy. It is a "flattened-out" model of the hierarchical relationships of the employees.

Each record in the table holds the employee and supervisor IDs. The relation of the supervisor to the employee is identified by the level of superiority. An employee's direct supervisor is always at level one. The higher the supervisor is in the chain of command, the higher his level will be for each employee.

Oracle Purchasing uses the PO\_EMPLOYEE\_HIEARCHIES\_ALL table whenever an employee's supervisor is sought. Currently, this is needed for approving documents, finding the next person to forward a document to, and processing security. Oracle Purchasing resorts to this table only when positions are used throughout the organization.

#### PO\_HAZARD\_CLASSES\_B

Column Descriptions

PO\_HAZARD\_CLASSES\_B contains information about the hazardous materials classes you use in your business. Oracle Purchasing lets you record hazard class information to let you comply with Section 19 of the International Safety Rating System. You need one row for each hazard class you use.

Oracle Purchasing uses this information to let you provide hazard class information on your purchase orders, requisitions, RFQs, and quotations.

#### PO\_HEADERS\_ALL

PO\_HEADERS\_ALL contains header information for your purchasing documents. You need one row for each document you create. There are six types of documents that use PO\_HEADERS\_ALL:

- RFQs
- Quotations
- · Standard purchase orders
- · Planned purchase orders
- Blanket purchase orders
- Contracts

Each row contains buyer information, supplier information, brief notes, foreign currency information, terms and conditions information, and the status of the document. Oracle Purchasing uses this information to record information that is related to a complete document.

PO\_HEADER\_ID is the unique system-generated primary key and is invisible to the user. SEGMENT1 is the system-assigned number you use to identify the document in forms and reports. Oracle Purchasing generates SEGMENT1 using the

PO\_UNIQUE\_IDENTIFIER\_CONT\_ALL table if you choose to let Oracle Purchasing generate document numbers for you. SEGMENT1is not unique for the entire table. Different document types can share the same numbers. You can uniquely identify a row in PO\_HEADERS\_ALL using SEGMENT1 and TYPE\_LOOKUP\_CODE or using PO\_HEADER\_ID.

If APPROVED\_FLAG is 'Y', the purchase order is approved. If your document type is a blanket purchase order, contract purchase order,RFQ, or quotation, Oracle Purchasing uses START\_DATE and END\_DATE to store the valid date range for the document. Oracle Purchasing only uses BLANKET\_TOTAL\_AMOUNT for blanket purchase orders or contract purchase orders.

If you autocreate a quotation from an RFQ using the Copy Document window, Oracle Purchasing stores the foreign key to your original RFQ in FROM\_HEADER\_ID. Oracle Purchasing also uses FROM\_TYPE\_LOOKUP\_CODE to indicate that you copied the quotation from an RFQ.

Oracle Purchasing does not use SUMMARY\_FLAG and ENABLED\_FLAG. Because future versions of Oracle Purchasing will

## use them, SUMMARY\_FLAG and ENABLED\_FLAG should always be 'N' and 'Y' respectively.

You enter document header information in the header region of the Purchase Orders, RFQs, and Quotations windows.

#### Database Triggers

Trigger Name : PO\_MRC\_HEADERS\_BIUD

Trigger Time : BEFORE Trigger Level : ROW

Trigger Event : INSERT, UPDATE, DELETE

This MRC trigger only exists when you install the Multiple Reporting Currencies feature. It is executed when you perform an insert, update, or delete statement on the table PO\_HEADERS\_ALL. For each record being inserted/updated/deleted in PO\_HEADERS\_ALL, this trigger inserts/updates/deletes corresponding reporting currency records in the MRC subtable, PO\_MC\_HEADERS. In addition, this trigger also populates the MRC VARCHAR2 columns in PO\_HEADERS\_ALL.

#### PO\_HEADERS\_ARCHIVE\_ALL

PO\_HEADERS\_ARCHIVE\_ALL contains archived purchase order header information. Oracle Purchasing only archives the following documents:

- Standard purchase orders
- Blanket purchase orders
- Contract purchase orders

When you modify a PO\_HEADER row, Oracle Purchasing will archive it after you (re)approve the purchase order or after you print it (this depends on the purchasing system options). You can retrieve previous revisions of the purchase order header using this table.

The latest archived revision will have LATEST\_EXTERNAL\_FLAG set to 'Y'.

You need one row for each document header you archive. Each row contains the same information as the PO\_HEADERS\_ALL table. Oracle Purchasing uses this information to ensure you keep copies of your legal documents.

Oracle Purchasing does not currently read or retrieve information in this table.

#### PO\_INTERFACE\_ERRORS

PO\_INTERFACE\_ERRORS contains error message information generated by the open interface programs in Oracle Purchasing. For every interface transaction row with errors, this table contains a row for each column that has an error.

The INTERFACE\_TYPE and INTERFACE\_TRANSACTION\_ID columns identify the Oracle Purchasing program and interface transaction that generated the error message. The COLUMN\_NAME and ERROR\_MESSAGE columns identify the interface column in error with a descriptive error message. The PROCESSING\_DATE column contains the date when the error message was generated.

#### PO\_LINES\_ALL

PO\_LINES\_ALL stores current information about each purchase order line. You need one row for each line you attach to a document. There are five document types that use lines:

- RFQs
- Quotations
- Standard purchase orders
- · Blanket purchase orders
- Planned purchase orders

Each row includes the line number, the item number and category, unit, price, tax information, matching information, and quantity ordered for the line. Oracle Purchasing uses this information to record and update item and price information for purchase orders, quotations, and RFQs.

PO\_LINE\_ID is the unique system—generated line number invisible to the user. LINE\_NUM is the number of the line on the purchase order. Oracle Purchasing uses CONTRACT\_NUM to reference a contract purchase order from a standard purchase order line. Oracle Purchasing uses ALLOW\_PRICE\_OVERRIDE\_FLAG, COMMITTED\_AMOUNT, QUANTITY\_COMMITTED, MIN\_RELEASE\_AMOUNT only for blanket and planned purchase order lines.

The QUANTITY field stores the total quantity of all purchase order shipment lines (found in PO\_LINE\_LOCATIONS\_ALL).

This trigger is installed via a post-install step for Web Requisitions and is required only if this module is used. There is a prerequisite that ConText be installed. The trigger places a re-index request on the ConText queue.

#### PO\_LINES\_ARCHIVE\_ALL

Foreign Kevs

PO\_LINES\_ARCHIVE\_ALL contains archived purchase order line information. Oracle Purchasing only archives lines for the following documents:

- Standard purchase orders
- Blanket purchase orders

When you modify a purchasing line, Oracle Purchasing will archive it after you (re)approve the purchase order or after you print it (this depends on the purchasing system options). You can retrieve revisions of the purchase order line using this table. The latest archived revision will have LATEST\_EXTERNAL\_FLAG set to 'Y'.

You need one row for each document line you archive. Each row contains the same information as the PO\_LINES\_ALL table. Oracle Purchasing uses this information to ensure you keep copies of your legal documents.

Oracle Purchasing does not currently read or retrieve information in this table.

#### PO\_LINE\_LOCATIONS\_ALL

PO\_LINE\_LOCATIONS\_ALL contains information about purchase order shipment schedules and blanket agreement price breaks. You need one row for each schedule or price break you attach to a document line. There are seven types of documents that use shipment schedules:

- RFQs
- Quotations
- Standard purchase orders
- Planned purchase orders
- Planned purchase order releases
- Blanket purchase orders
- Blanket purchase order releases

Each row includes the location, quantity, and dates for each shipment schedule. Oracle Purchasing uses this information to record delivery schedule information for purchase orders, and price break information for blanket purchase orders, quotations and RFQs.

PO\_RELEASE\_ID applies only to blanket purchase order release shipments. PO\_RELEASE\_ID identifies the release on which you placed this shipment.

SOURCE\_SHIPMENT\_ID applies only to planned purchase order release shipments. It identifies the planned purchase order shipment you chose to release from.

PRICE\_OVERRIDE always equals the purchase order line price for standard purchase order shipments. For blanket and planned purchase orders, PRICE\_OVERRIDE depends on the values of the ALLOW\_PRICE\_OVERRIDE\_FLAG and NOT\_TO\_EXCEED\_PRICE in the corresponding row in PO\_LINES\_ALL:

- If ALLOW\_PRICE\_OVERRIDE\_FLAG is 'N', then PRICE\_OVERRIDE equals UNIT\_PRICE in PO\_LINES\_ALL.
- If ALLOW\_PRICE\_OVERRIDE\_FLAG is 'Y', the PRICE\_OVERRIDE can take any value that is smaller than NOT\_TO\_EXCEED\_PRICE in PO\_LINES\_ALL.

The QUANTITY field corresponds to the total quantity ordered on all purchase order distribution lines (found in PO\_DISTRIBUTIONS\_ALL).

Oracle Purchasing automatically updates QUANTITY\_RECEIVED, QUANTITY\_ACCEPTED, and QUANTITY\_REJECTED when you receive, return, or inspect goods or services. Oracle Payables automatically updates QUANTITY\_BILLED when you match an invoice with a purchase order shipment. Oracle Purchasing automatically updates QUANTITY\_CANCELLED when you cancel a purchase order shipment.

Oracle Purchasing sets APPROVED\_FLAG to 'Y' when you approve the corresponding purchase order if there are no problems associated with the shipment and its related distributions.

Oracle Purchasing sets ENCUMBERED\_FLAG to 'Y' and enters the ENCUMBERED\_DATE when you approve a purchase order if you use encumbrance.

#### PO\_LINE\_LOCATIONS\_ARCHIVE\_ALL

PO\_LINE\_LOCATIONS\_ARCHIVE\_ALL contains archived purchase order shipment information. Oracle Purchasing only archives shipments for the following documents:

- Standard purchase orders
- · Planned purchase orders
- Planned purchase order releases
- Blanket purchase order releases

When you modify a shipment, Oracle Purchasing will archive it after you (re)approve the purchase order or after you print it (this depends on the purchasing system options). You can retrieve revisions of the shipments using this table.

The latest archived revision will have LATEST\_EXTERNAL\_FLAG set to 'Y'.

You need one row for each shipment archive. Each row contains the same information as the PO\_LINE\_LOCATIONS\_ALL table. Oracle Purchasing uses this information to ensure you keep copies of your legal documents.

#### PO\_LINE\_TYPES\_B

Foreign Keys

PO\_LINE\_TYPES\_B contains information about the line types you use in your business. You need each row for each line type you use.

Oracle Purchasing uses this information to provide default information when you create a document line using a line type. Oracle Purchasing also uses this information to control how you enter information on your document lines according to the line type you choose. ORDER\_TYPE\_LOOKUP\_CODE is 'AMOUNT' for an amount-based line type or 'QUANTITY' for a quantity-based line type.

#### PO\_LOCATION\_ASSOCIATIONS

PO\_LOCATION\_ASSOCIATIONS associates a location defined within an organization with an Oracle Receivables customer. For each organization, you need one row for each association you want to make between a location and a customer.

You define location associations using the Business Purposes region of the Customer Addresses window. You first pick the customer along with a customer site and then enter the location and organization that you want to create an association with.

#### PO\_MASSCANCEL\_INCLUDES\_ALL

PO\_MASSCANCEL\_INCLUDES\_ALL stores ranges of Accounting Flexfields for which you want to cancel purchase orders or requisitions using MassCancel. MassCancel selects purchase orders or requisitions for cancellation which have at least one distribution within the Accounting Flexfield ranges you specify and which meet your other cancellation criteria.

Your segment values of your cancellation ranges are stored in the SEGMENTn\_HIGH and SEGMENTn\_LOW columns, where n is a number from 1 to 30. OBJECT\_TYPE and OBJECT\_NUMBER provide the document type (REQUISITION, STANDARD, PLANNED or BLANKET) and transaction number of your document.

#### PO\_MASSCANCEL\_INTERIM

PO\_MASSCANCEL\_INTERIM stores purchase orders or requisitions which Oracle Purchasing selects for cancellation based on your MassCancel selection criteria.

Oracle Purchasing includes requisitions or purchase orders in this table which meet your selection criteria, but which are not cancellable for some reason. Oracle Purchasing stores this reason in the CANNOT\_CANCEL\_REASON column. The FULLY\_IN\_RANGE flag indicates whether all the distributions of the purchase order or requisition fall within the range of Accounting Flexfields you specify as cancellation criteria.

#### PO\_NOTIFICATION\_CONTROLS

PO\_NOTIFICATION\_CONTROLS contains information about the notification control rules for blanket, planned, and contract purchase orders. There is one record in this table for each notification control rule that an employee creates for a purchase order header. Oracle Alert uses the notification control rules to determine the type of notification to send, the effective date range for the notification, and the document amount that triggers the notification.

NOTIFICATION\_ID is the unique system–generated primary key and is invisible to the user.

You enter notification control information in the Notification Controls window, accessible through the Purchase Orders window.

#### PO\_ONLINE\_REPORT\_TEXT

PO\_ONLINE\_REPORT\_TEXT contains information about purchasing documents that fail the approval, cancel, or final-close submission checks. There is one record in the table for each error detected during the submission check. Each row includes the error that was detected and the document entity that the error is associated with.

ONLINE\_REPORT\_ID is the unique system–generated identifier that is invisible to the user.

Oracle Purchasing uses the online report when submitting a purchase order or requisition to the approval process, cancelling a purchase order, or final-closing a purchase order.

#### PO\_POSITION\_CONTROLS\_ALL

PO\_POSITION\_CONTROLS\_ALL contains information about assignment of control groups to jobs and/or positions (a position is a job within an organization). Each record contains the unique identifier of the position, the unique identifier of the control group, and the unique identifier of the function to which the control group applies. You can assign many control groups and functions to the same position.

This information is used during purchase order and requisition approval to control whether an employee in a specific position has the authority to approve the document.

#### PO\_PURGE\_PO\_LIST

Oracle Purchasing uses the table PO\_PURGE\_PO\_LIST to compile a list of purchase orders that meet the purging criteria. During the Initiate phase of a purge, the Purge process builds a list of purchase orders that are candidates for purging. The Confirm phase of the Purge process then uses this table to revalidate and finally delete purchase orders.

### PO\_PURGE\_REQ\_LIST

Oracle Purchasing uses the table PO\_PURGE\_REQ\_LIST to compile a list of requisitions that meet the criteria for purging. During the Initiate phase of a purge, the Purge process builds a list of requisitions that are candidates for purging. The Confirm phase of the Purge process then uses this table to revalidate and finally delete requisitions.

#### PO\_QUALITY\_CODES

PO\_QUALITY\_CODES stores information about the quality inspection codes you use in your business. You need one row for each quality inspection code. Each row includes the rank and corresponding code you can assign to an inspection. When entering receiving or inspection transactions, you use the list of values to choose an inspection code you define in this table. You define inspection codes in the Quality Inspection Codes window.

You can devise a ranking scheme for your inspection process. RANKING stores the order for your ranks. CODE contains the quality inspection code, and DESCRIPTION provides additional information for CODE.

#### PO\_QUOTATION\_APPROVALS\_ALL

PO\_QUOTATION\_APPROVALS\_ALL contains approval information for your quotation schedules. You can enter as many rows as you want for each quotation schedule. Each row includes the approval reason and active date range for the approval. Oracle Purchasing uses this information to identify approved quotation information.

You approve quotations using the Approve Entire Quotation window.

Oracle Purchasing uses APPROVAL\_TYPE to identify the usage you approve for the quotation schedule. Oracle Purchasing uses APPROVAL\_TYPE when you copy approved quotation information to your requisitions or purchase orders.

#### PO\_RELEASES\_ARCHIVE\_ALL

PO\_RELEASES\_ARCHIVE\_ALL contains archived release header information. Oracle Purchasing only archives releases for the following documents:

- Planned purchase order releases
- Blanket purchase order releases

When you modify a release, Oracle Purchasing will archive it after you (re)approve the release or after you print it (this depends on the purchasing system options). You can retrieve revisions of the releases using this table.

The latest archived revision will have LATEST\_EXTERNAL\_FLAG set to 'Y'.

You need one row for each release you archive. Each row contains the same information as the PO\_RELEASES\_ALL table. Oracle Purchasing uses this information to ensure you keep copies of your legal documents.

Oracle Purchasing does not currently read or retrieve information in this table.

## PO\_REQEXPRESS\_HEADERS\_ALL

PO\_REQEXPRESS\_HEADERS\_ALL stores information about Requisition Templates. You need one row for each requisition template header you create. Each row includes the name and description for the requisition template. Oracle Purchasing uses this information to assign a name to each set of frequently requested groups of items you define in PO\_REQEXPRESS\_LINES\_ALL.

Requisition templates let you group frequently requested items together and provide their unit prices and sourcing information. You define requisition templates using the Requisition Templates tabbed region of the Supplier Item Catalog window.

## PO\_REQEXPRESS\_LINES\_ALL

T-----

PO\_REQEXPRESS\_LINES\_ALL stores information about Requisition Template lines. You need one row for each Requisition Template line you define. Each row includes the Requisition Template name, item class, item number, item description, unit price, and suggested supplier. Oracle Purchasing uses Requisition Template lines to let you quickly create requisitions.

Requisition Templates group frequently requested items together and stores their unit prices and sourcing information. You enter Requisition Template lines using the Requisition Templates tabbed region of the Supplier Item Catalog window.

## PO\_REQUISITIONS\_INTERFACE\_ALL

PO\_REQUISITIONS\_INTERFACE\_ALL contains requisition information from other applications. Each row includes all the information necessary to create approved or unapproved requisitions in Oracle Purchasing. The Oracle Purchasing Requisition Import feature uses this information to create new requisition headers, lines and distributions.

You use the Submit Request window to launch the Requisition Import program for any set of rows. You identify the set of rows you want to import by setting the INTERFACE\_SOURCE\_CODE and BATCH\_ID columns appropriately in the interface table.

The Requisition Import program validates your data, derives or defaults additional information and writes an error message for every validation that fails into the PO\_INTERFACE\_ERRORS table. Then the program groups and numbers requisition lines according to the criteria you specify in the GROUP\_CODE and REQ\_NUMBER\_SEGMENT1 columns, and creates new requisitions.

Most of the columns in the PO\_REQUISITIONS\_INTERFACE\_ALL table are identical to the corresponding columns in the PO\_REQUISITIONS\_HEADERS\_ALL, PO\_REQUISITION\_LINES\_ALL and PO\_REQ\_DISTRIBUTIONS\_ALL tables. You can additionally enter reference information in the INTERFACE\_SOURCE\_LINE\_ID column.

# PO\_REQUISITION\_HEADERS\_ALL

Foreign Voys

PO\_REQUISITION\_HEADERS\_ALL stores information about requisition headers. You need one row for each requisition header you create. Each row contains the requisition number, preparer, status, and description.

REQUISITION\_HEADER\_ID is the unique system-generated requisition number. REQUISITION\_HEADER\_ID is invisible to the user. SEGMENT1 is the number you use to identify the requisition in forms and reports. Oracle Purchasing generates SEGMENT1 using the PO\_UNIQUE\_IDENTIFIER\_CONTROL table if you choose to let Oracle Purchasing generate requisition numbers for you.

PO\_REQUISITION\_HEADERS\_ALL is one of three tables storing requisition information. PO\_REQUISITION\_HEADERS\_ALL corresponds to the Header region of the Requisitions window.

SEGMENT1 provides unique values for each row in the table in addition to REQUISITION\_HEADER\_ID.

## PO\_REQUISITION\_LINES\_ALL

PO\_REQUISITION\_LINES stores information about requisition lines. You need one row for each requisition line you create. Each row contains the line number, item number, item category, item description, need-by date, deliver-to location, item quantities, units, prices, requestor, notes, and suggested supplier information for the requisition line.

LINE\_LOCATION\_ID identifies the purchase order shipment line on which you placed the requisition. LINE\_LOCATION\_ID is null if you have not placed the requisition line on a purchase order. BLANKET\_PO\_HEADER\_ID and BLANKET\_PO\_LINE\_NUM store the suggested blanket purchase agreement or catalog quotation line information for the requisition line. PARENT\_REQ\_LINE\_ID contains the REQUISITION\_LINE\_ID from the original requisition line if you exploded or multisourced this requisition line.

PO\_REQUISITION\_LINES is one of three tables storing requisition information. This table corresponds to the Lines region of the Requisitions window.

#### Database Triggers

Trigger Name : JL\_BR\_PO\_IMPORT\_REQUISITIONS

Trigger Time : BEFORE Trigger Level : ROW Trigger Event : INSERT

This trigger is executed on insert of a row in PO\_REQUISITION\_LINES\_ALL when TRANSACTION\_REASON\_CODE is null. TRANSACTION\_REASON\_CODE is populated from the inventory item, if available, or from PO\_SYSTEM\_PARAMETERS. This is done only if the country is Brazil (country\_code = 'BR') and the Latin America Localizations for Brazil (product\_code = 'JL') is installed. For Brazilian PO localizations, TRANSACTION\_REASON\_CODE is a required field. In all other cases, this trigger does nothing. new.transaction\_reason\_code is null.

## PO\_REQ\_DISTRIBUTIONS\_ALL

PO\_REQ\_DISTRIBUTIONS\_ALL stores information about the accounting distributions associated with each requisition line. Each requisition line must have at least one accounting distribution. You need one row for each requisition distribution you create. Each row includes the Accounting Flexfield ID and requisition line quantity.

PO\_REQ\_DISTRIBUTIONS\_ALL is one of three tables storing your requisition information. This table corresponds to the requisition Distributions window, accessible through the Requisitions window.

## PO\_RESCHEDULE\_INTERFACE

Foreign Keys

PO\_RESCHEDULE\_INTERFACE temporarily stores quantity or need-by date changes to requisition lines suggested by Oracle Master Scheduling/MRP. You insert one row into the PO\_RESCHEDULE\_INTERFACE table for each change you want to make to a requisition. Each row includes the requisition line identifier, the new quantity, and the new need-by date for the requisition line.

You run the Requisition Reschedule program to implement the changes. Oracle Purchasing uses PROCESS\_ID to designate all rows updated by a single run of the Requisition Reschedule process. You should not use this column.

# PO\_RFQ\_VENDORS

PO\_RFQ\_VENDORS stores the information about the set of suppliers assigned to a request for quotation (RFQ). You need one row for each supplier you want to receive an RFQ. Each row associates an RFQ and the supplier who receives the RFQ. Oracle Purchasing uses this information to track supplier responses to RFQs.

PO\_HEADER\_ID identifies the RFQ. VENDOR\_ID, VENDOR\_SITE\_ID, and VENDOR\_CONTACT\_ID specify the supplier information. PRINT\_FLAG value of 'Y' indicates whether Oracle Purchasing printed the RFQ for this supplier.

## PO\_SUPPLIER\_ITEM\_TOLERANCE

PO\_SUPPLIER\_ITEM\_TOLERANCE indicates the supplier's ability to exceed the capacity. For example, you can indicate that the supplier's capacity can be exceeded by two percent if you order 12 days in advance. There can be multiple tolerances based on the number of days in advance that the supplier is informed.

## PO\_UNIQUE\_IDENTIFIER\_CONT\_ALL

PO\_UNIQUE\_IDENTIFIER\_CONT\_ALL stores information about the current, highest, system—generated numbers for the Oracle Purchasing tables that require special sequencing. You need one row for each sequentially system—generated number for each organization. The table includes rows for each of the following: purchase orders, requisitions, receipts, suppliers, quotations, and requests for quotations (RFQs).

For each organization, there are four rows for each of the following entities: PO\_HEADERS\_ALL, PO\_REQUISITION\_HEADERS\_ALL, PO\_HEADERS\_RFQ and PO\_HEADERS\_QUOTE. There are two rows corresponding to the entities PO\_VENDORS and RCV\_SHIPMENT\_HEADERS.

The information for the quotation and RFQ sub-entities is associated with the PO\_HEADERS\_ALL table entity. TABLE\_NAME values for quotations and RFQs are 'PO\_HEADERS\_QUOTE' and 'PO\_HEADERS\_RFQ' respectively.

## PO\_UN\_NUMBERS\_B

PO\_UN\_NUMBERS\_B contains information about the United Nations hazardous materials classification numbers that you use in your business. Oracle Purchasing lets you record UN numbers information to let you comply with Section 19 of the International Safety Rating System. You need one row for each UN number you use.

Oracle Purchasing uses this information to let you provide UN number information on your purchase orders, requisitions, RFQs, and quotations.

# **PO\_USAGES**

PO\_USAGES\_U1

PO\_USAGES stores descriptions for using notes. You need one row for each usage you define. Each row includes the usage name and description. Oracle Purchasing uses this information to assign a usage to each note. Examples of note usages are 'Vendor' and 'Receiver'. Oracle Purchasing automatically provides the information for this table when you upgrade or install Oracle Purchasing.

#### PO\_USAGE\_ATTRIBUTES

PO\_USAGE\_ATTRIBUTES stores the relationship between note usages stored in PO\_USAGES and their attributes stored in PO\_NOTE\_ATTRIBUTES. Usage attributes indicate what forms and reports enter, view, or print notes. For instance, Oracle Purchasing prints Note to Supplier on purchase orders. The usage for Note to Supplier is 'Vendor' and the attribute for printing a note on a purchase order is 'PRINTPO'. There is one row in this table where NOTE\_ATTRIBUTE is 'PRINTPO' and USAGE\_ID is the identifier for the Usage 'Vendor'.

Oracle Purchasing seeds this table when you upgrade or install Oracle Purchasing. The primary key is a concatenation of USAGE\_ID and NOTE\_ATTRIBUTE. PO\_USAGE\_ATTRIBUTES has no foreign keys and does not correspond to any forms.

#### **PO\_VENDORS**

PO\_VENDORS stores information about your suppliers. You need one row for each supplier you define. Each row includes the supplier name as well as purchasing, receiving, payment, accounting, tax, classification, and general information. Oracle Purchasing uses this information to determine active suppliers. VENDOR\_ID is the unique system-generated receipt header number invisible to the user. SEGMENT1 is the system-generated or manually assigned number you use to identify the supplier in forms and reports. Oracle Purchasing generates SEGMENT1 using the

PO\_UNIQUE\_IDENTIFIER\_CONTROL table if you choose to let Oracle Purchasing generate supplier numbers for you. This table is one of three tables that store supplier information. PO\_VENDORS corresponds to the Suppliers window.

## PO\_VENDOR\_LIST\_ENTRIES

PO\_VENDOR\_LIST\_ENTRIES stores information about each supplier that you place on a supplier quotation list. You need one row for each supplier you place on a supplier quotation list. Each row includes a unique identifier for the supplier, site, and contact. Oracle Purchasing uses this information to copy lists of suppliers on the RFQs you create. This table is one of two tables that store supplier quotation list information.

PO\_VENDOR\_LIST\_ENTRIES corresponds to the lines region of the Supplier Lists window.

## PO\_VENDOR\_LIST\_HEADERS

PO\_VENDOR\_LIST\_HEADERS stores information about supplier quotation lists you create. You need one row for each supplier quotation list title you define. Each row contains the name and description for a supplier quotation list. Oracle Purchasing uses this information to group suppliers you enter in PO\_VENDOR\_LIST\_ENTRIES.

This table is one of two tables that store the supplier quotation list information. PO\_VENDOR\_LIST\_HEADERS corresponds to the header region of the Supplier Lists window. The primary key is VENDOR\_LIST\_HEADER\_ID. Oracle Purchasing generates VENDOR\_LIST\_HEADER\_ID from the sequence VENDOR\_LIST\_HEADERS\_S.

Database Triggers

3 - 516

RA\_ADDRESSES\_S

## Oracle Proprietary, Confidential Information—Use Restricted by Contract

ADDRESS\_ID

Trigger Name : RA\_ADDRESSES\_BRIU

Trigger Time : BEFORE Trigger Level : ROW

Trigger Event : INSERT, UPDATE

This validates the key fields within the address, typically the state, county, and city, populating AR\_SALES\_TAX with the combined tax rates applicable to each of these jurisdictions. Finally, assigning the foreign key AR\_LOCATION\_COMBINATIONS.LOCATION\_ID to RA\_ADDRESSES.LOCATION\_ID.

Trigger Name : RA\_ADDRESSES\_T1\_VEH

Trigger Time : AFTER
Trigger Level : ROW
Trigger Event : UPDATE

This trigger exports Oracle Automotive-specific Address and Address Cross-Reference data to CARaS to maintain data consistency whenever data in Oracle is changed. It calls the Automotive export launcher procedure which validates the Automotive-specific data before it exports it to CARaS.

Address and Address Cross-Reference data comes from the following tables:

ECE\_TP\_GROUP
ECE\_TP\_HEADERS
ECE\_TP\_DETAILS
RA\_ADDRESSES
VEH\_RA\_ADDRESSES

The above tables have triggers to export Address and Address Cross-Reference data to CARaS.

# **RA\_CUSTOMERS**

This table stores your customer header information. Only information related to the customer entity is stored in this table. Any information specific to an address for a given customer is stored in RA\_ADDRESSES\_ALL. You need one row for each customer in Oracle Receivables.

#### **RA\_RULES**

This table stores invoicing and accounting rules. You need one row for each accounting rule you define. Oracle Receivables provides two invoicing rules: ADVANCED INVOICE and ARREARS INVOICE. Oracle Receivables uses this information to create invoices and to schedule revenue recognition for invoices imported using AutoInvoice. Oracle Receivables stores revenue recognition schedules in RA\_RULE\_SCHEDULES.

#### RA\_SALESREPS\_ALL

This table stores information about your salespeople. Each row includes the salesperson ID and AutoAccounting information, if you based your AutoAccounting definition on salespeople. You need one row for each salesperson you wish to use in Oracle Receivables. Oracle Receivables uses this information to assign sales credits to your salespeople. NAME and STATUS are required even though they are null allowed. Oracle Receivables initially contains one record in this table with the name "No Sales Credit". This record is used to indicate that no sales credit should be assigned to a transaction. "No Sales Credit" is the default value in the Primary Salesperson field of many of the transaction windows if no default salesperson is associated with the customer record.

Foreign Vors

This table stores information about each customer's site or location. One customer can have many site uses (such as Bill-To, Ship-To, and Statements) and each site must be assigned to an address in RA\_ADDRESSES\_ALL. You need one row for each site use for a customer. The primary key for this table is SITE\_USE\_ID.

#### RCV\_LOTS\_INTERFACE

Foreign Vors

RCV\_LOTS\_INTERFACE holds temporary lot number transaction records for a parent record in the RCV\_TRANSACTIONS\_INTERFACE table. Data in the RCV\_TRANSACTIONS\_INTERFACE table will eventually reside in RCV\_LOT\_TRANSACTIONS after being processed by the receiving transaction processor.

It is possible to have child records in this table without a parent record due to the automatic save feature in the Lot Entry and Serial Number forms. The receiving transaction processor deletes these orphan rows as part of normal processing.

#### RCV\_LOTS\_SUPPLY

RCV\_LOTS\_SUPPLY stores information corresponding to the lot numbers and quantities that are available to be transacted for intransit shipments.

If you perform an intransit shipment between two organizations that are both under lot control, the receiving transaction processor maintains information about the lot numbers and quantities that you issued from the shipping organization. The Lot Entry and Serial Numbers forms use this information to ensure that the same lot numbers and lot quantities that were shipped are used when you deliver the items to stores.

RCV\_RECEIVING\_SUB\_LEDGER stores information about accounting entries generated within the receiving business unit. This information is a back-up copy of all receiving inspection journal entries inserted into the GL\_INTERFACE table. RCV\_RECEIVING\_SUB\_LEDGER contains one row for every debit or credit generated by the receiving process. If you use online accruals, this table will have actual debit and credit entries. If you use purchase order encumbrance, this table will encumber debit and credit entries.

#### Database Triggers

Trigger Name : RCV\_MRC\_REC\_SUB\_LEDGER\_BI

Trigger Time : BEFORE Trigger Level : ROW Trigger Event : INSERT

This MRC trigger only exists when you install the Multiple Reporting Currencies feature. It is executed when you perform an insert, update, or delete statement on the table RCV\_RECEIVING\_SUB\_LEDGER. For each record being inserted/updated/deleted in RCV\_RECEIVING\_SUB\_LEDGER, this trigger inserts/updates/deletes corresponding reporting currency records in the MRC subtable, RCV\_MC\_REC\_SUB\_LEDGER.

#### RCV\_SERIALS\_INTERFACE

RCV\_SERIALS\_INTERFACE holds temporary serial number transaction records for a parent record in RCV\_TRANSACTIONS\_INTERFACE. Data in the RCV\_TRANSACTIONS\_INTERFACE table will eventually reside in RCV\_SERIAL\_TRANSACTIONS after they are processed by the transaction processor.

It is possible to have child records in this table without a parent record due to the automatic save feature in the Lot Entry and Serial Numbers forms. The receiving transaction processor deletes orphan rows during normal processing.

#### RCV\_SERIALS\_SUPPLY

RCV\_SERIALS\_SUPPLY stores information about the serial numbers that are currently available to transact for intransit shipments.

If you perform an intransit shipment between two organizations that are both under serial control, the receiving transaction processor maintains information about the serial numbers and the lots in which they were issued when the items were shipped. The Lot Entry and Serial Numbers forms use this information to ensure that the same serial numbers that were used for the intransit shipment are also used when you deliver the items to stores in the destination organization.

#### RCV\_SHIPMENT\_HEADERS

RCV\_SHIPMENT\_HEADERS stores common information about the source of your receipts or expected receipts. You group your receipts by the source type and the source of the receipt. Oracle Purchasing does not allow you to group receipts from different sources under one receipt header.

There are two receipt source types, Supplier and Internal Order, that you need to use when receiving against different source document types. You use a receipt source type of 'Supplier' when receiving items that you ordered from an external supplier using a purchase order. When you receive items that are part of an inter-organization transfer, or when receiving items that you request from your inventory using an internal requisition, the receipt type would be 'Internal Order'. The 'Internal Order' receipt source type populates the ORGANIZATION ID column.

Oracle Purchasing creates a receipt header when you are entering your receipts or when you perform inter–organization transfers using Oracle Inventory. When Oracle Inventory creates a receipt header for an intransit shipment, the receipt number is not populated until you receive the shipment.

Database Triggers

Trigger Name : RCV\_MRC\_SHIPMENT\_HEADERS\_BIUD

Trigger Time : BEFORE Trigger Level : ROW

RCV\_SHIPMENT\_HEADERS\_S

Trigger Event : INSERT, UPDATE, DELETE

This MRC trigger only exists when you install the Multiple Reporting Currencies feature. It is executed when you perform an insert, update, or delete statement on the table RCV\_SHIPMENT\_HEADERS. For each record being inserted/updated/deleted in RCV\_SHIPMENT\_HEADERS, this trigger inserts/updates/deletes corresponding reporting currency records in the MRC subtable, RCV\_MC\_SHIPMENT\_HEADERS. In addition, this trigger also populates the MRC VARCHAR2 columns in RCV\_SHIPMENT\_HEADERS.

SHIPMENT\_HEADER\_ID

# **RCV\_SHIPMENT\_LINES**

RCV\_SHIPMENT\_LINES stores information about items that have been shipped and/or received from a specific receipt source.

RCV\_SHIPMENT\_LINES also stores information about the default destination for intransit shipments.

#### RCV\_SUB\_LEDGER\_DETAILS

RCV\_SUB\_LEDGER\_DETAILS stores information about accounting entries generated within the receiving business unit. RCV\_SUB\_LEDGER\_DETAILS contains one row for every debit or credit generated by the receiving process. If you use online accruals, this table will have actual debit and credit entries. This table is used only for period-end accruals.

#### **RCV\_TRANSACTIONS**

RCV\_TRANSACTIONS stores historical information about receiving transactions that you have performed. When you enter a receiving transaction and the receiving transaction processor processes your transaction, the transaction is recorded in this table.

Once a row has been inserted into this table, it will never be updated. When you correct a transaction, the net transaction quantity is maintained in RCV\_SUPPLY. The original transaction quantity does not get updated. You can only delete rows from this table using the Purge feature of Oracle Purchasing.

#### Database Triggers

Trigger Name : AX\_RCV\_TRANSACTIONS\_ARI1

Trigger Time : AFTER
Trigger Level : ROW
Trigger Event : UPDATE

NEW.transaction\_type IN ('CORRECT', 'RECEIVE', 'RETURN TO VENDOR') AND
NEW.source\_document\_code != 'INVENTORY' AND NEW.destination\_type\_code != 'INVENTORY'

AND NEW.destination\_type\_code != 'EXPENSE' This trigger captures accounting events information for the Global Accounting Engine when Oracle Inventory and the set of books used is defined as a subledger in the Global Accounting Engine application. The information is used to create Global Accounting Engine accounting events. This trigger may populate the AX\_EVENTS table.

This trigger captures accounting events related to Oracle Purchasing receiving transactions created by the transaction processor. It executes when the transaction type is 'RECEIVE', 'CORRECT', or 'RETURN TO VENDOR', and the source document code is not 'INVENTORY' and the destination type code is not 'EXPENSE' or 'INVENTORY'.

Purpose: Capture accounting events related to a PO receiving transaction when it is created.

Trigger Name : RCV\_MRC\_TRANSACTIONS\_BIUD

Trigger Time : BEFORE Trigger Level : ROW

Trigger Event : INSERT, UPDATE, DELETE

This MRC trigger only exists when you install the Multiple Reporting Currencies feature. It is executed when you perform an insert, update, or delete statement on the table RCV\_TRANSACTIONS. For each record being inserted/updated/deleted in RCV\_TRANSACTIONS, this trigger inserts/updates/deletes corresponding reporting currency records in the MRC subtable, RCV\_MC\_TRANSACTIONS. In addition, this trigger also populates the MRC VARCHAR2 columns in RCV\_TRANSACTIONS.

#### RCV\_TRANSACTIONS\_INTERFACE

RCV\_TRANSACTIONS\_INTERFACE stores information about receiving transactions that are waiting to be processed by the receiving transaction processor or were rejected due to an error when the transaction processor attempted to process the transaction.

When the receiving transaction processor successfully processes a transaction, it deletes the transaction from this table.

# SO\_HEADERS\_ALL

Foreign Keys

SO\_HEADERS\_ALL stores header information for orders in Oracle Order Entry/Shipping.

Columns S1 through S30 store RESULT\_IDs of all the cycle actions an order undergoes. Columns S1\_DATE through S30\_DATE store the dates on which each RESULT\_ID was stored.

#### SO\_HEADERS\_INTERFACE\_ALL

SO\_HEADERS\_INTERFACE\_ALL stores order header information that import from a feeder system into Oracle Order Entry/Shipping using OrderImport. ID and name columns corresponding to required information at order entry or booking are conditionally required depending on whether the order import source required IDs. ORDER\_SOURCE\_ID corresponds to SO\_HEADERS\_ALL.ORIGINAL\_SYSTEM\_SOURCE\_CODE, and ORIGINAL\_SYSTEM\_REFERENCE to SO\_HEADERS\_ALL.ORIGINAL\_SYSTEM\_REFERENCE.

For more information on OrderImport, refer to the Integrating Oracle Order Entry/Shipping Using OrderImport essay in the Oracle Manufacturing, Distribution, Sales and Service Open Interfaces Manual, Release 11.

#### SO\_LINES\_ALL

SO\_LINES\_ALL stores information for all order lines in Oracle Order Entry/Shipping. Columns S1 through S30 store RESULT\_IDs of all the cycle action an order line undergoes, so that you can enforce prerequisites for subsequent cycle actions. Columns S1\_DATE through S30 DATE hold the dates on which each RESULT ID was stored.

#### SO\_LINES\_INTERFACE\_ALL

Foreign Keys

Primary Key Table

ORDER\_CATEGORY

SO\_LINES\_INTERFACE\_ALL stores order line information you import from a feeder system into Oracle Order Entry/Shipping. ID and name columns corresponding to required information at order entry or booking are conditionally required depending on whether the order import source requires IDs.

ORIGINAL\_SYSTEM\_LINE\_REFERENCE corresponds to SO\_LINES\_ALL.ORIGINAL\_SYSTEM\_LINE\_REFERENCE. PARENT\_LINE\_REF is the ORIGINAL\_SYSTEM\_LINE\_REFERENCE of a top-level model line. LINK\_TO\_LINE\_REF is the ORIGINAL\_SYSTEM\_LINE\_REFERENCE of the item directly above this item in the bill of material. PARENT\_LINE\_REFERENCE and LINK\_TO\_LINE\_REF are used only when you want to import models. Do not populate the interface tables with records for included items.

For more information on OrderImport, refer to the Integrating Oracle Order Entry/Shipping Using OrderImport essay in the Oracle Manufacturing, Distribution, Sales and Service Open Interfaces Manual, Release 11.

#### SO\_LINE\_DETAILS\_INTERFACE

SO\_LINE\_DETAILS\_INTERFACE stores information about how the order lines defined in SO\_LINES\_INTERFACE\_ALL are scheduled in Oracle Manufacturing. LOT\_NUMBER, SUBINVENTORY, and SCHEDULE\_DATE can be specified here for the order lines in SO\_LINES\_INTERFACE\_ALL. ID and name columns corresponding to required information at order entry or booking are conditionally required depending on whether the order import source requires IDs.

For more information on OrderImport, refer to the Integrating Oracle Order Entry/Shipping Using OrderImport essay in the Oracle Manufacturing, Distribution, Sales and Service Open Interfaces Manual, Release 11.

# SO\_ORDER\_CANCELLATIONS

SO\_ORDER\_CANCELLATION stores order and order line cancellations that have occurred in Oracle Order Entry/Shipping. HEADER\_ID indicates which orders have been cancelled, while LINE\_ID indicates which order lines have been cancelled.

#### SO\_ORDER\_SOURCES\_115

SO\_ORDER\_SOURCES\_115 stores the names of feeder systems from which you import sales order data (order headers, order lines, and sales credits) into Oracle Order Entry/Shipping using OrderImport. USE\_IDS\_FLAG is set to 'Y' for order sources providing unique IDs along with the parameters they pass; if set to 'N', Oracle Order Entry/Shipping automatically assigns the IDs during the import process.

#### SO\_ORDER\_TYPES\_115\_ALL

SO\_ORDER\_TYPES\_115\_ALL stores the order types you define in Oracle Order Entry/Shipping. The column CYCLE\_ID stores the order cycle that orders of a given type automatically follow. ORDER\_NUMBER\_SOURCE\_ID stores the source assigned to number orders of a given type automatically. PRICE\_LIST\_ID stores the associated price list for orders of a given type.

#### SO\_PICKING\_LINES\_ALL

SO\_PICKING\_LINES\_ALL stores the picking lines for a picking header. The column ORDER\_LINE\_ID indicates the order line corresponding to each picking line. The column SHIPPED\_QUANTITY indicates how many items from each picking line have been shipped, while REQUESTED\_QUANTITY reflects the amount that has been reserved, and ORIGINAL\_REQUESTED\_QUANTITY indicates the total ordered amount.

# SO\_PRICE\_LISTS\_B

SO\_PRICE\_LISTS stores information about the price lists you define in Oracle Order Entry/Shipping. The column SECONDARY\_PRICE\_LIST\_ID stores a secondary list for each price list, used in case an item is not on the main price list.

## WIP\_COST\_TXN\_INTERFACE

WIP\_COST\_TXN\_INTERFACE contains information about cost transactions that Oracle Work in Process needs to process. Each row represents either a resource transaction, an overhead transaction, an outside processing transaction, a cost update transaction, a period close variance transaction, or a job close variance transaction. Each row contains the transaction date, the job or repetitive schedule to charge, the resource to charge, the primary unit of measure transaction quantity, and the actual unit of measure transaction quantity. Each row also has foreign key references to move and receiving transaction tables. Oracle Work in Process uses this table to support all resource cost transactions including transactions loaded from other systems through the Oracle Work in Process Open Resource Transaction Interface.

## WIP\_DISCRETE\_JOBS

WIP\_DISCRETE\_JOBS stores discrete job information. Each row represents a discrete job, and contains information about the assembly being built, the revision of the assembly, the job quantity, the status of the job, the material control method, accounting information, and job schedule dates. Oracle Work in Process uses this information to control discrete production.

WIP\_DISCRETE\_JOBS\_N8

WIP\_DISCRETE\_JOBS\_U1

WIP\_DISCRETE\_JOBS\_T5 calls PJM\_PROJECT\_LOCATOR.GET\_JOB\_PROJECTSUPPLY in order to update the locator for the project, if any, that is associated with the job being updated.

Trigger Name : WIP\_DISCRETE\_JOBS\_BRU

Trigger Time : BEFORE
Trigger Level : ROW
Trigger Event : UPDATE

WIP\_DISCRETE\_JOBS\_BRU calls the procedure WIP\_MRP\_RELIEF.WIP\_DISCRETE\_JOBS\_PROC if the status\_type of the job is (or was) < 7 and the job is a standard discrete job. This procedure inserts rows into the table MRP\_RELIEF\_INTERFACE to do MPS relief.

Trigger Name : WIP\_DISCRETE\_JOBS\_BRD

Trigger Time : BEFORE
Trigger Level : ROW
Trigger Event : DELETE

WIP\_DISCRETE\_JOBS\_BRD calls the procedure WIP\_MRP\_RELIEF.WIP\_DISCRETE\_JOBS\_PROC if the status\_type of the job was < 7 and the job is a standard discrete job. This procedure inserts rows into the table MRP\_RELIEF\_INTERFACE to do MPS relief.

Trigger Name : WIP\_DISCRETE\_JOBS\_T4

Trigger Time : BEFORE
Trigger Level : ROW
Trigger Event : INSERT

WIP\_DISCRETE\_JOBS\_T4 calls PJM\_PROJECT\_LOCATOR.GET\_JOB\_PROJECTSUPPLY in order to find a locator for the project, if any, that is associated with the job being created.

## WIP\_ENTITIES

WIP\_ENTITIES stores information about jobs, repetitive assemblies, and flow schedules. Each row includes a unique entity name, the entity type, and the assembly being built. Oracle Work in Process uses this information to control production activities and to ensure that entities with duplicate names are not created.

## WIP\_LINES

WIP\_LINES stores production line information. Each row includes a line name, maximum and minimum rate information, throughput for rate based lines (i.e., lead time), and the start and stop time information that determines the amount of time per day the line is available. Oracle Work in Process uses this information when you associate a line with a repetitive assembly and when you define a repetitive schedule on the line. Production line information is optional for discrete jobs.

## WIP\_MOVE\_TXN\_INTERFACE

WIP MOVE TXN INTERFACE contains information about the shop floor move transactions that need to be processed. Each row contains the transaction date, the job or repetitive schedule in which you are moving assemblies, the primary unit of measure, the actual unit of measure transaction quantities, the foreign keys necessary for WIP to process the move transaction as well as information about the from and to operation sequence numbers, operation codes, and intraoperation steps. This table supports all shop floor move transactions including transactions loaded from other systems, such as bar code readers, using the Oracle Work in Process Open Move Transaction Interface.

# WIP\_OPERATIONS

WIP\_OPERATIONS stores information about job and repetitive schedule operations. Each row represents a specific operation and includes an operation sequence number, which orders the operations for a job or repetitive schedule. Each row also includes the assembly quantity completed at an operation, the quantity at each intraoperation step, the department associated with an operation, the scheduled start and completion dates for an operation, the operation's countpoint and backflush types and other operation attributes. In general, Oracle Work in Process uses this information to control and monitor assembly production on the shop floor.

# WIP\_OPERATION\_RESOURCES

WIP\_OPERATION\_RESOURCES stores information about the resource requirements associated with job and repetitive schedule operations. Each row represents a resource requirement and contains a sequence number, the resource's unit of measure, its usage rate or amount, and several other attributes that control how it is scheduled and costed. Oracle Work in Process uses this information to schedule jobs and repetitive schedules and to charge resources to jobs and schedules.

## WIP\_REPETITIVE\_SCHEDULES

WIP\_REPETITIVE\_SCHEDULES stores repetitive schedule information. Each row includes a repetitive schedule identifier, information about the schedule's production line, start and end dates, rate, throughput, revision, status, and information on the General Ledger accounts to which charges for this schedule are written. Oracle Work in Process uses this information to control repetitive production.

## WIP\_REQUIREMENT\_OPERATIONS

WIP\_REQUIREMENT\_OPERATIONS stores information about the material requirements of jobs and schedules. Each row represents a material requirement and contains information about the component item, its usage quantities, the using department, requirement date, and the material control method. Oracle Work in Process uses this information to track the material usage of jobs and schedules.

## WIP\_TRANSACTIONS

WIP\_TRANSACTIONS stores information about WIP resource transactions. Each row represents a single resource transaction and includes a unique transaction identifier, a transaction date, the job or repetitive schedule charged, the WIP operation and resource charges, and the number of units of measure applied. Oracle Work in Process uses this information to track resource charges and to calculate the values stored in WIP\_TRANSACTION\_ACCOUNTS.

## Database Triggers

Trigger Name : AX\_WIP\_TRANSACTIONS\_ARI1

Trigger Time : AFTER
Trigger Level : ROW
Trigger Event : INSERT

This trigger captures information needed to create subledger accounting events when Oracle Inventory and the set of books used is defined as a subledger in the Global Accounting Engine application. This trigger captures accounting events related to WIP resource transactions. It executes when an outside resource transaction is created and the source is from a receiving system. It populates the AX\_EVENTS table.

## WIP\_TRANSACTION\_ACCOUNTS

WIP\_TRANSACTION\_ACCOUNTS stores the accounting information for each resource transaction in WIP\_TRANSACTIONS. These two tables are joined by the column TRANSACTION\_ID, and contain at least two account rows for every resource transaction (unless the resource is uncosted). Each row represents a debit or a credit accounting entry, and the sum of all rows for a given transaction identifier should be zero. Each row includes the account, transaction date, transaction value, purpose (ACCOUNTING\_LINE\_TYPE), and the source of the charges (the job or repetitive schedule). The TRANSACTION\_VALUE and BASE\_TRANSACTION\_VALUE are transferred to the GL\_INTERFACE table through the period close or GL transfer (INTCGL) process. Until this process is run, the GL\_BATCH\_ID is set to -1. Oracle Work in Process uses the information in this table to track the financial impact of resource transactions.
